THE FERRANTI-SHIRLEY CONE-PLATE VISCOMETER

This advanced instrument enables the flow behavior of simple or complex fluids to be examined and evaluated with totally new standards of accuracy and precision. The instrument is particularly useful in handling the complex non-Newtonian fluids. Methods long used for characterizing these fluids have been subject to error. The cone-plate principle affords a constant rate of shear speed accuracy within 0.2%; cone speeds continuously variable so as to give a shear rate range from 2 to 20,000 sec.⁻¹; direct reading of speed, full torque at all speeds, five sensitivities by selector switch.

A programmed control unit for use in conjunction with an X-Y recorder to permit automatic plotting of characteristics is also available.

Investigate this advanced viscometer and the new principle that brings a greater degree of accuracy to the examination of fluids under today's more critical and exacting requirements, both in laboratory and production control applications.
