

volumes, the OCT Consolidated Index series will rank as one of the most important central reference sources. The present volume will prove most useful, and is highly recommended to all having need for "best" numerical property values.

Geologic Map

The **Geologic Map of New York, 1961**, prepared by the New York State Geological Survey (New York State Museum and Science Service, Albany, 1962. 5 maps. 10 pp. Illus. \$11), the first new geologic map of New York State in three-score years, is not only a splendid scientific achievement in mapping, but the accompanying text provides a brief, comprehensive, geologic history of the area.

The map itself is in five sheets, each about 2½ by 3 feet in size. An enormous amount of information is presented, with respect to the kinds of rock, their ages, and their distribution within the State. The rocks are divided into 168 map units.

Geologic history, step-by-step, is in four sheets of text. Diagrams and figures of many kinds make the history both simple and interesting. A physiographic diagram of the State is an unexpected bonus. But note: to get the map and text, one must order the complete map folio, at \$11, not the separate map sheets, at \$2 each (details from the Museum).

All that is needed now is a seven-armed Martian to handle the folio in a high wind, on a loose talus slope. Of course, Earth Men can take separate, folded sheets into the field.
