LITTLE, BROWN

For a well-balanced coverage of the main concepts of both classical and modern genetics . . .

GENETICS

By Irwin H. Herskowitz
Hunter College

Alexander G. Bearn of the Rockefeller Institute reviews *Genetics in Science Magazine*:

"*Genetics* . . . is a sturdy and thorough introductory treatment of the science of genetics. . . . Herskowitz has managed to inject the vigor and pace of modern genetics into his book while recording the systematic interconnection of well-established genetic facts. . . . Herskowitz has used a novel approach in that many of the chapters have been focused on the work of particular named investigators, thus effectively incorporating authenticity into the text while encouraging the more adventurous student to pursue the original papers."

Genetics includes numerous drawings especially prepared for the text, as well as many photographs. Six Nobel Prize lectures and a translation from Mendel are included at the end of the text. Extensively class-tested. In cloth. 543 pages. 7 1/4 x 9 3/4.

MINIMUM CONTACT—MAXIMUM SAFETY

with self-sticking TIME LABORATORY TAPES and LABELS

Self-sticking tapes and labels eliminate a direct source of personal contamination in laboratories. Pre-printed or plain tapes and labels provide a quick means of marking laboratory equipment. Just write necessary data on label (use pencil, pen or grease marker) and place it on any surface — glass, metal or plastic. Labels stick tight through autoclave (up to 250°), deep freeze (to -70°), or water bath. When no longer needed these tapes and labels can be quickly removed leaving no sticky residue. Vinyl Coated — available in white or colors.

See your laboratory or hospital supplier for a complete selection of Time Tapes and Labels.

New Science Publications From PRENTICE-HALL

Foundations of Experimental Biology

Edited by Benjamin H. Willier, The Johns Hopkins University, and Jane M. Oppenheimer, Bryn Mawr College. Eleven classical, pioneering papers in the field of experimental embryology—first published between 1888 and 1939. These papers may not be found elsewhere in English in a single volume. They have been collected to stimulate an interest in the early history of experimental embryology and will give both student and teacher an opportunity to trace some of the foundation-stones on which the science of the developing embryo has since been built. Feb. '64, 288 pp., Text Pr. \$5.95

Electronic Spectra and Quantum Chemistry

by C. Sandorfy, University of Montreal, Canada. An introduction to research in electronic spectra, emphasizing the larger molecules of interest to the chemist. Describes the approximate wave mechanical methods making it possible to compute theoretically the frequencies and intensities of spectral bands. Feb. '64, 400 pp., Price \$14.95 r

Science and Ideas

Edited by Arnold B. Arons, Amherst College, and Alfred M. Bork, Reed College. An anthology of readings embracing the history, nature, and limitations of scientific thought, which stresses the interaction between science and other aspects of our culture. The readings were carefully selected to include a wide range of approaches, from the narrative and descriptive to the technical and mathematical. Feb. '64, 278 pp., paperbound, Text Pr. \$3.95

Principles and Applications of Rheology

by A. G. Fredrickson, University of Minnesota. The general and non-specialized approach of this text enables the student to cover a wide range of rheological theory, and obtain a balanced knowledge of theory, experiment, and practice. It examines the rheological behavior of materials in terms of invariant equations of state, with care given to formulating the proper invariance of the equations. Feb. '64, 326 pp., Text Pr. \$9.75
