**SUBMICROSCOPIC ORTHO-  
AND PATHO-MORPHOLOGY  
OF THE LIVER In Two Volumes**

By **Heinz David**, Head of the Electron-microscopic Division of the Institute of Pathology, Humboldt-University of Berlin

361 superbly detailed half-tone plates illustrate the intricate submicroscopic structure of the liver and are thoroughly explained in an accompanying text. In addition to providing a complete study of liver pathology, the book contains a great deal of general information on cytology, comparative anatomy, and biochemistry. *There is no comparable book in English.*

In addition to investigations on the human liver, there are comparative studies of twenty-four different animal species of various age groups. Researchers using optical microscopes will find that the plates will help them interpret their own observations in terms of submicroscopic details such as the Disse space, the Golgi apparatus, and the fine structure of bile capillaries.

**CONTENTS:** Technique. Parenchymal cells of the liver in various animal species and in man. Sinusoid and star cells. Ortho- and patho-morphology of the various components of the parenchymal liver cell. The periportal field and the changes of its components (liver fibrosis, liver cirrhosis, cholangiocellular carcinoma). The liver cell during proliferation. Mitotic processes in the liver. The effect of derangement of elementary functions. Virus diseases. Intoxications. Necrosis and autolysis. The liver homogenate. Artifacts. Literature references. Subject index.

**MANUAL OF EXPERIMENTAL  
ELECTROPHYSIOLOGY**

*International Series of Monographs on Pure and Applied Biology, Modern Trends in Physiological Sciences Division, Volume 24* By **I. C. Whitfield**, University of Birmingham

A practical introduction to problems of experimental electrophysiology. Attention is directed towards discussion and illustration of problems arising under actual conditions and their practical solution.

**CONTENTS:** The electronic amplification of signals. Time factors in the recording of biological potentials. Temporal and spatial factors in the electrical behaviour of excitable tissues. The electrochemical basis of membrane potentials. The energy supply for potential maintenance. Action potentials in muscle. Electrocardiography. The study of the peripheral nerve. Sensory receptors. Surface stimulating and recording in the CNS. Electrode techniques for depth recording. Recording from within the CNS.

**ADVANCES IN ENZYME  
REGULATION, Volume 2**

Edited by **George Weber**, Indiana State University

These papers are the proceedings of the second symposium on the topic of enzyme regulation. They combine critical discussions on biochemistry, physiology, and pathology of regulation of enzyme activity and synthesis in liver with special reports on experiments in influencing enzymatic activity in neoplastic liver as a technique of chemotherapy.

radiation and for total sunlight were stressed. Problems of measuring ultraviolet B in large-scale field studies and a description of a new method for such measurements were noted. The importance of being able to compare measurements in order to assess the carcinogenic role of sunlight at different parts of the earth was emphasized. Also noted was the need for standardization of light measurements in both laboratory and field.

In pathology, the problem of classification of skin tumors and their topographical distribution exists. Parallels between distribution of these lesions on the face and incidence of ultraviolet B were shown; the important part played by scattering was demonstrated. In the course of discussion of the association of skin cancer and keratosis, the idea developed that it might be advisable to include both in a syndrome of pathological effects of ultraviolet B. The possibility of systematic histopathologic studies of changes in the skin with age—comparing exposed and covered parts—was discussed.

Epidemiological discussions included reports on the distribution of skin cancer in the Transvaal, England, and Queensland, where there is high incidence of the disease. Concurrent measurements of the ultraviolet of sunlight are being made in these areas; these investigations constitute the only close coordination of measurements of sunlight and of cancer incidence. Difficulties in epidemiological study of a disease that depends upon cumulation of effect over a long period of time were stressed; continued residence in the same area, and proper reporting by the patient are factors of critical importance.

Perhaps the most important outcome of the conference was the general recognition of the many uncertainties and problems involved. Each member learned something of others' difficulties with the particular kind of measurements he is trying to make. There seemed complete agreement that the ultraviolet B of sunlight is an important factor in human skin cancer; uncertainties center on the relative importance of this factor in regard to geographical distribution and the extent to which other factors may enter.

The variety of backgrounds of the participants, which made possible interchange of ideas on various aspects of the problem, is indicated in the following list: H. F. Blum (physiology, National Cancer Institute), F. Daniels, Jr.

(dermatology, Cornell University Medical College), G. H. Findlay (dermatology, University of Pretoria), R. Latarjet (director, Institut de Radium, Paris), R. E. The conference was held under the auspices of the National Cancer Institute, National Institutes of Health.

## LABORATORY EXERCISES FOR BIOLOGICAL SCIENCE

by OLWEN WILLIAMS, Ph.D., ERIK K. BONDE, Ph.D.,  
University of Colorado, Boulder;  
and NEWELL A. YOUNGREN, Ph.D., University of Arizona, Tucson  
*2nd Printing, September 1964. 189 Pages, Wirebound \$3.50*

This book represents a series of carefully developed exercises designed especially for the use of living or freshly killed material such as bean plants, pea plants, frogs, fruit flies and locally obtainable pond organisms. Where such specimens are unobtainable or too difficult for students to handle, the authors have developed exercises using prepared slides for study of the woody stem, preserved specimens for dissection of the fetal pig, sheep's brain and eye, and inner ear of the shark. The contents include a study of organization and maintenance in cells, higher plants and vertebrates; vertebrate reproduction; plant and animal genetics; diversity of organization, maintenance and reproduction in major plant and animal groups; taxonomic relationships; and a consideration of the relationship of organisms to their environment.

Air Products and Chemicals, Inc. has production capability in all atmospheric and rare gases, fluorine and fluorine-containing compounds, various C <sub>1</sub> -C <sub>4</sub> range hydrocarbons, carbon monoxide, nitric oxide, and many other specialty gases oriented to laboratory, research, and pilot plant applications.	Air Products and Chemicals, Inc. gases are produced, processed, analyzed, and packaged under advanced control techniques that assure consistent quality. Constant monitoring by gas chromatograph, infrared spectrophotometer, and other analytical procedures maintains dependability to meet exacting customer requirements.	Specialists from Air Products engineering and research departments are available to assist customers in the solution of technical problems involving the application of specialty gases, as well as their more efficient and economical utilization.	Specialty gas customers are further served by availability of complete lines of gas handling equipment and accessories, instrumentation, and analytical accessories. Many items in these lines are of exclusive Air Products design and manufacture. Air Products engineering service is also available to assist with particular customer inquiries.

## IS THERE SOMETHING FISHY IN YOUR LAB RESULTS LATELY?

If your problem has to do with the purity of GC or TLC standards or supplies, or the accuracy of GC or TLC apparatus, Applied Science can help you. Applied Science leads the field in high-purity lipids, fatty acids, radiochemicals, cholesterol esters, triglycerides, and phosphoglycerides. A purity level of 99.5% is maintained unless otherwise stated. Test results on our own GC calibration standards are supplied to customers. We are proud of our highly purified TLC adsorbents and the GAS-CHROM supports sieved and treated in our labs, as well as the TLC apparatus and our GC supplies—packings, columns, accessories—most of which we use as well as sell. As for service, 90% of orders are shipped within 6 hours of receipt.
