REICHERT

New COMBINATION Phase Contrast & Anoptral Contrast Microscopy with Laboratory Microscope "BIOZET"

A new dual purpose turret condenser of high resolution and a sextuple nosepiece accommodating any combination of six Phase and Anoptral objectives, enables convenient observation and comparison of Phase and Anoptral* contrast images. The Reichert "Biozet" with centerable condenser holder and built-in low voltage illumination is ideally suited for this and all other investigations in transmitted light and for photomicrography.

*Anoptral contrast is negative phase contrast with colored background added to enhance contrast.

Solid state electronics used to be a thing of mystery

Then along
came DigiBits—
digital logic elements

DigiBit systems for programming, recording and analyzing data have been debunking solid state myths for more than four years. Psychologists, physiologists, toxicologists, researchers in a wide variety of disciplines, have helped dispel the mystery themselves through professional application of DigiBit systems. As applications grow, the old myths pale and disappear; replaced with expanded horizons in experimental parameters. Researchers dig deeper, obtain more accurate resolutions and let them perform experiments heretofore impractical (or impossible) due to the physical restrictions of electro-mechanical equipment.

There's an easy and conclusive way for you to make your own evaluation. BRS will conduct a three day introductory course for you and your colleagues on the principles and uses of DigiBit solid state systems. The course can be given at your location or at BRS headquarters in Beltsville, Md. For complete details address your inquiry to the BRS Technical Training Director. There is no obligation for the course but scheduling does require adequate advance notice.

FEATURES

1. Glass column
2. Load capacities of 1-200 mg
3. Sample volumes up to 150 ml
4. Use with any discontinuous or continuous buffer systems
5. Continuous band elution
6. Effective temperature control at 0° C
7. Gel lengths of 1-25 cm
8. Fractionation time less than 10 hours
9. High reproductivity of elution patterns
10. Hydrostatic equilibration

Eight serum samples on a single acrylamide gel—Reproducible and Intercomparable.

Eight* samples on the same gel slab; compare and analyze them together.

The serum samples above have been separated simultaneously on a single gel slab. Electrophoretic conditions were identical for each sample.

- To prepare: pour in *single* gel solution (not eight) and apply samples directly into sample slots.
- After running, stain *together*, destain *together*, and evaluate *together*.
- Total procedure requires less working time than any other method.

*Twelve place sample slot former also available.

Savant Analytical Systems for HIGH VOLTAGE ELECTROPHORESIS

ELECTROPHORESIS TANK has "see-through" Lucite walls that permit observation of entire run. Lightweight rack is adjustable for paper lengths up to 46". Ideal for separation of a wide variety of compounds, fingerprinting of peptides, amino acid mapping, preparative separations.

FLAT PLATE is light in weight, has stainless steel channels for trouble-free operation. Accommodates sheets up to 19" wide (24" long), as well as one or many strips of filter paper. Removable vessels make it easy to change buffer solutions. Use this system for separation of nucleotides, conjugated steroids, organic and inorganic acids.

POWER SUPPLIES in four performance-proven models cover range from 1,000 to 10,000 volts. All feature solid state circuitry throughout — instant starting — current overload relays and complete internal interlock protection — separate voltage and current meters. Available with preset timer for runs of up to five hours.
