NEW MODEL 621 IR SPECTROPHOTOMETER PROVIDES OPTIMUM ENERGY TRANSFER OVER ENTIRE 4000-200 CM⁻¹ RANGE

In the Model 621 Filter-Grating* Infrared Spectrophotometer, Perkin-Elmer — world leader in infrared — has achieved a new level of performance over the instrument's total operating range: from 4000 to 200 cm⁻¹. Fundamental to this additional per-

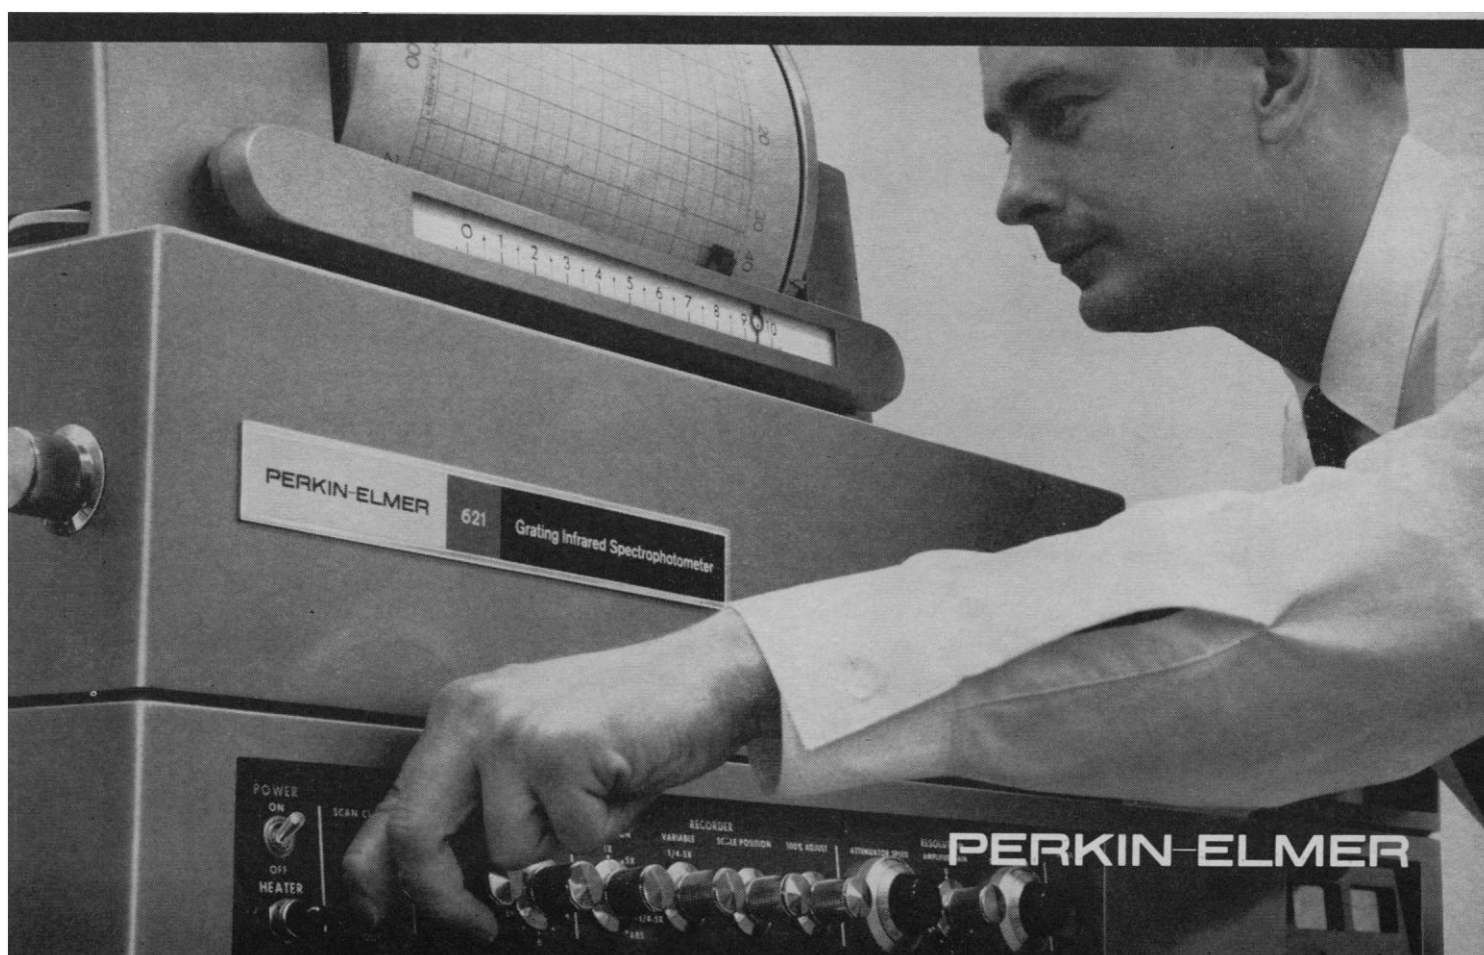

formance is greater utilization of available energy, even where low energy is classically a problem. To do this, Perkin-Elmer has

- widened the slit opening capability to optimize performance under low energy conditions;
- enlarged the size of the Nernst glower source for greater total energy;
- utilized aspheric (toroidal, paraboloidal) optics for most efficient transfer of energy, and precise imagery—a Perkin-Elmer exclusive feature;
- redesigned the thermocouple detector target for greater sensitivity over the total range;
- maintained Perkin-Elmer's unique, fast

f/4.5 optical system, with short paths for efficient and rapid purging.

These features provide an energy bonus and increase the optical precision of the Model 621's system. Thus, they enhance a traditional Perkin-Elmer advantage: the unique capacity to perform microanalysis to an unequalled degree of sensitivity. No matter whether the sample is limited, or the component of quantitative interest is present only as the fractional part of a microgram, Perkin-Elmer's total system is geared to provide a quick, easy and precise determination. For more information, including sample spectra, write to Perkin-Elmer Corporation, 723 Main Avenue, Norwalk, Connecticut.

refrigerated circulators

We offer refrigerated baths and circulators for lower operating temperatures (to -125°C), better control accuracies (to $\pm 0.02^{\circ}\text{C}$), and higher cooling capacities than any other manufacturer. Also, a complete line of less sophisticated table model units for routine tempering or heat-removal applications.

CANTIAGUE ROAD, WESTBURY, N. Y. 11590/ED 4-7500

Completion of new laboratory facilities and expanded research programs create a desirable opening at ROCHE for a

Senior Information Biologist

The chief functions of this position are to survey, index and abstract material of immediate or potential interest from medical journals and other sources, both domestic and foreign. Also included is compilation of bibliographies and literature searches, primarily medical in nature.

The assignment involves close contact with other members of our senior research staff.

An MS degree, plus experience is required; or a PhD in one of the biological sciences, or an MD. A reading knowledge of German and French is needed, as a minimum.

The location is our headquarters at Nutley, N.J., in a pleasant accessible suburban area.

Please write—you are assured of prompt, courteous attention. Address

MR. R. M. CALLAN, EMPLOYMENT MANAGER

HOFFMANN-LA ROCHE INC.

POSITIONS WANTED

Animal Behaviorist, Ph.D., 14 years of college teaching; tenured; grants, publications. Seeks academic position in West. Box 88, SCIENCE. X

Biochemist, D.Sc., teaching, government, research, foreign experience, now with university, seeks improvement. Especially interested protein characterization/structure work. Will establish group. Teaching, research, administration. Industry, university, research institute. Box 94, SCIENCE. X

(a) **Biochemistry Ph.D.**; radiobiology specialist; metabolism, brain, cancer research-teaching experience; available for research, academic, or consultant appointment. (b) **Psychology Ph.D.**, physiology minor; chronic disease-emotion problems, mental retardation, CNS research-teaching experience; prefers academic or medical opportunity. Woodward Medical Personnel Bureau, 185 North Wabash, Chicago 60601. X

Biologist, Ph.D. (fellow NSF-AEC, 1959; NSF 1962), seeks academic teaching and research position. Societies, papers, languages. Box 95, SCIENCE. X

Botany Ph.D. Trained in tissue culture, morphology and embryology desires a temporary/permanent teaching/research assignment. Box 96, SCIENCE. X

General Physiologist, Ph.D., seeks teaching-research position. Box 312, SCIENCE. 4/29

Marine Invertebrates available. Write Alice M. Baldwin, P.O. Box 4664, Santa Barbara, Calif. X

Microbiologist desires administrative position; postdoctoral and teaching experience. Box 97, SCIENCE. X

Neurophysiologist Ph.D. Interdisciplinary background in neuropharmacology, neuroanatomy, psychobiology. Desires research/teaching position. Box 78, SCIENCE. 4/29

Parasitologist, Helminths, and General Invertebrates. 13 years' experience, both marine and freshwater, 35 publications, 4 grants current. Box 98, SCIENCE. X

Physiologist-M.S., anatomy minor. Age 32. Desires college teaching position; preferably in southeastern United States. Teaching experience in biology. Box 99, SCIENCE. X

POSITIONS OPEN

Biologist

Teach semester courses in Genetics and Embryology, 1966-67. Chairman, Department of Biology, Bowdoin College, Brunswick, Maine.

Developmental Zoologist, Ph.D.

Assistant Professor to teach embryology and comparative anatomy in alternate semesters and to participate in biology core curriculum. Research in area of developmental zoology; M.S. program. Midwestern state university; enrollment 8,000 full-time equivalents; salary \$8500-\$9000 for 9 months. Write

Box 100, SCIENCE

POSITIONS OPEN

Experienced Medical Technologist (ASCP) with a Master's degree in biochemistry or equivalent and supervisory experience. Salary range \$12,000 to \$15,000.

H. C. Bryant, M.D., Physicians Clinical Laboratory, 425 East Washington Street, Ann Arbor, Michigan

PLANT PATHOLOGIST—to conduct research and related extension in Pathology of Ornamental Plants at the Royal Botanical Gardens, Hamilton, Th.D. or equivalent in experience required, preferably with background in Ornamental Horticulture (temperate climate). Associations with McMaster University make available additional research and library facilities. Salary range comparable to rank of Assistant Professor at a Canadian University. Reply to: The Director, Royal Botanical Gardens, P.O. Box 399, Hamilton, Ontario, Canada.

PREDOCTORAL OPPORTUNITY IN BIOLOGICAL OCEANOGRAPHY available to graduate students from any accredited U.S. University at Duke University Marine Laboratory. Facilities include use of R/V EASTWARD in their research. Stipend \$800/month, plus tuition, equipment and supplies and some travel. Application must include endorsement of major professor and requires use of research vessel—for more information contact Program Director, R. J. Menzies, Duke University Marine Laboratory, Beaufort, North Carolina.

Ph.D. PHYSIOLOGIST-PHARMACOLOGIST

Unique opportunity for a Ph.D. with broad biological interests in drug research and development. To provide essential liaison between laboratory and clinical scientists, aid in evaluating scientific data and help plan R & D activities. Occasional travel and attendance at scientific meetings is an integral part of this position. Prior industrial experience is not required.

Please send resume to Cyrus M. Greenberg, Ph.D., Director of Scientific Employment, SMITH KLINE & FRENCH LABORATORIES,

1502 Spring Garden Street, Philadelphia, Pa. 19101.

An Equal Opportunity Employer

Zoologist or Botanist, Ph.D., to head 15-member biology department. Under 40 preferred. Some biochemistry and/or microbiology desirable. Research, publications, college teaching experience. Mail resume, college transcripts, and state salary desired to: Chairman, Division of Natural Sciences, State University College, Brockport, New York 14420.

GOVERNMENT OF NEW ZEALAND

VACANCY for Scientist, Winchmore Irrigation Research Station (Vacancy No. 1262).

SALARY: Up to £2,710 p.a. depending on qualifications and experience. Opportunity exists for further promotion to £3,100 p.a. on scientific merit.

QUALIFICATIONS

REQUIRED: Master of Science or Bachelor of Science in Chemistry.

DUTIES: Research into the effect of irrigation on soil fertility and plant nutrition in pasture and crops, with emphasis on nitrogen, phosphorus and sulphur. Within these broad limits appointee will be encouraged to specialize on a particular aspect of the work. Technical assistance and any field experiments necessary to further this study will be arranged.

Standard conditions of assistance to New Zealand apply, i.e., fares to New Zealand for self and family; accommodation expenses for a limited period in New Zealand. Payment of fares and expenses is subject to a bond to serve in the New Zealand Public Service for a period of 3 years.

Applications close on 10 June 1966 and should be addressed to the New Zealand Embassy, 19 Observatory Circle, NW, Washington, D.C. 20008.

DEVELOPMENTAL AND METABOLIC CONTROL MECHANISMS AND NEOPLASIA

"The differentiation of tissues in multicellular organisms has long concerned scientists. . . . The classical enzymologists have done much to advance our ideas of metabolic control. With their exacting studies of increasingly complex enzyme systems, the concepts of feedback control by metabolic end products was established. Now, an additional dimension to this type of control is added with the studies involving metabolic interaction at the repressor: receptor level, which may take metabolic control back to the level of genetic read-out. . . . The rapidly expanding interest has been prompted in many instances by new concepts. At the same time, this growing research activity has been aided and abetted by a wealth of new research techniques and instrumentation."—From the Preface by R. Lee Clark

Steroid Biochemist

Large pharmaceutical research institute needs a Steroid Biochemist, with Ph.D. degree to direct a research group in the study of steroidogenesis and steroid metabolism as part of the endocrine research program.

The Sterling-Winthrop Research Institute is the research division of Sterling Drug, Inc., one of the world's largest producers of medicinal agents. Sterling Drug manufactures professional, consumer and industrial products identified by more than a thousand brand names. The Institute employs over 600 people and is engaged in a very active pharmaceutical research program. It is near Albany, on a plateau overlooking the Hudson River Valley.

Salaries open. Excellent employee benefits include educational assistance at local colleges. Travel and moving expenses paid.

Send complete resume to C. E. Alford, Director of Personnel

STERLING-WINTHROP RESEARCH INSTITUTE

Rensselaer, New York

An Equal Opportunity Employer

TEACHING POSITIONS

Teaching positions available in the field of Inorganic, Theoretical, Instrumental, Analytical and Physical Chemistry, in the Chemistry Department; and in the field of Electricity and Magnetism, Mechanics and Atomic Physics in the Physics Department, Mosul College of Science, University of Baghdad, starting September 1966. Rank and salary will depend on qualification—and a Ph.D. is required. Application should be made not later than June 1966. Send all resume to the Dean of College of Science, Mosul, Iraq.

WANTED — HISTOCHEMIST

Technologist to supervise Histology Department and to develop histochemical procedures for routine and research programs. Good working environment with considerable flexibility. Must have flexible personality with strong interest in chemistry; 8000 surgical cases and 250 autopsies per year. We would consider applicants with potential even if somewhat short on experience. State salary desired. Apply to John I. Antonius, M.D., The Mason Clinic, Seattle, Washington.

Zoologist interested in some aspect of field biology. Undergraduate teaching in California college of good reputation. Salary and rank open. Excellent facilities. Begin 1966 or '67. Apply Dean of Faculty, University of Redlands, Redlands, California.

CANADA

Crop Ecology and Microclimatology

An opening exists at a scientific research organization for research in this field.

Applicant should have M.Sc. or Ph.D. in crop science, horticulture, or botany, and must have the ability to carry out a programme of ecological and agro-meteorological research. Research soon to be based at Sheridan Park Research Community, near Toronto.

Please provide full details of qualifications to:

Personnel Officer,
**ONTARIO RESEARCH
FOUNDATION**

43 Queen's Park Cres. E.
Toronto 5, Ontario

Postdoctoral traineeship in research pathology, biochemistry or biomedical sciences sponsored by NIH. Excellent laboratory facilities and research supervision. Remuneration according to previous training up to \$8000 per annum of which \$3600 are tax free. U.S. citizenship or immigration visa required. Apply Dr. Henry P. Schwarz, Philadelphia General Hospital, 34th Street & Curie Avenue, Philadelphia.

(a) **Tissue Mechanisms Research**, university medical center; West. (b) **Group Leader-Technical Research**; product-process development, plant operations; to \$19,000; East. (c) **Parasitology Research**, Midwest pharmaceutical house; to \$15,000. (d) **Laboratory Supervisor**, biological supplies production; Central; to \$9000. *Faculty Appointments*: (e) **Biochemistry Chairman**, small professional college; East. (f) **Botany (Ecology-Morphology)**, Central university. (g) **Physical Science**, general-liberal college program; East; to \$8600. (h) **Microbiology/Zoology**, State college, East. Write **SCIENCE SERVICE**, The Medical Bureau, 900 North Michigan Avenue, Chicago, Illinois 60611.

GOVERNMENT OF NEW ZEALAND

VACANCY for Scientist, Levin Horticultural Research Centre (Vacancy No. 1260).

SALARY: Up to £2,710 depending on qualifications and experience. Prospects for advancement up to £3,100 p.a. on scientific merit.

QUALIFICATIONS

REQUIRED: Degree in Agricultural and Horticultural Science or Plant Science. Masterate or higher with honours preferred. Majoring units desired, Plant Pathology, Biochemistry, Chemistry and Botany. Knowledge of Biometrics an advantage, experience in crop protection research, field experimental work on pest and disease control desired. Knowledge of agricultural chemicals, fungicides, insecticides and fumigants essential.

DUTIES: To head section working on therapeutants for pest and disease control and horticultural crop protection. Responsible for organization of applied research and programmes of field experimentation, disease and pest control and problems of insect resistance, phytotoxicity, compatibility of spray materials and residues. Maintain a close liaison with Plant Diseases and Entomology Division, D.S.I.R., and with agricultural chemical manufacturers. The officer appointed as head of the section will be assisted by two scientific officers, one specializing in fungicides and one in insecticides.

Standard conditions of assistance to New Zealand apply, i.e., fares to New Zealand for self and family; accommodation expenses for a limited period in New Zealand. Payment of fares and expenses is subject to a bond to serve in the New Zealand Public Service for a period of 3 years.

Applications close on 30 June 1966 and should be addressed to the New Zealand Embassy, 19 Observatory Circle, NW, Washington, D.C. 20008.

LA TROBE UNIVERSITY MELBOURNE, AUSTRALIA THIRD FOUNDATION CHAIR IN BIOLOGY

La Trobe University will admit its first students in March, 1967, in courses in the Schools of Humanities, Social Sciences, Physical Sciences and Biological Sciences. In order to complete the basic staff structure of the School of Biological Sciences, the University invites applications for the third foundation chair in that school.

Professor A. B. Wardrop has recently taken on his appointment as one of the three foundation professors in the School. Professor Wardrop's main interests are in the field of cellular ultrastructure. A second appointment will be announced soon in the field of genetics. In order to provide balance, a scientist engaged in research into some aspects of the zoology of entire organisms such as their ecology and ethology, or in studies relating to the evolution of organisms, would most suitably complement the other activities planned for the School.

It is hoped that the new professor will be able to take up his position early in 1967. Prior to taking up appointment, however, it is planned to arrange consultation between the three professors in the School in order to discuss the broad planning of the courses to be offered.

The salary for the position will be \$(A)10,400 per annum. One Australian dollar equals approximately 8/- stg. or 1.12 U.S. dollars. Superannuation benefits will be available under the University's own scheme or under a scheme based on F.S.S.U. principles. Persons from overseas appointed to senior academic posts may be repatriated at the University's expense if they wish to leave the service of the University after three years.

Information is available on request setting out further details on the planning of the University, study leave, travel allowances, removal expenses, permanent housing, temporary accommodation and initial housing subsidy.

Further information may be obtained from the Association of Commonwealth Universities (Branch Office), Marlborough House, Pall Mall, London, SW1.

One copy of an application, enclosing a recent photograph and giving full name, date of birth, marital state, details of qualifications, experience, previous appointments and present position, research and publications and the names and addresses of three referees should be sent to the Registrar before Monday, 16 May 1966.

SPEAR micro-LINC is a very friendly computer

In spite of its extremely sophisticated approach to laboratory data acquisition and processing, you will find that a SPEAR micro-LINC remains affable and unassuming.* It talks to anyone who cares to open a conversation . . . and it always speaks their language.

```
HELLO THERE! THIS
IS YOUR FRIENDLY
LINC COMPUTER.

TO PROCEED, ALWAYS
PRESS THE EOL KEY.
```

1. It will usually start, for example, with a cheerful greeting.

```
EXECUTE THE PROGRAM
???????
```

2. Following a standard guide routine, it will probably ask you, politely, to select a program.

```
DATA ON CHANNEL ??
TAKE SAMPLES EVERY
???? μSEC
```

3. Then, warming to the subject, it may request more information, such as which of its 16 analog input channels you wish to have sampled, and the desired sampling rate.

```
DATA ON CHANNEL 12
TAKE SAMPLES EVERY
2003 μSEC
```

4. It will acknowledge your answer . . .

```
SAMPLES EVERY 2040
μSEC
```

```
DO 1
0. SAVE CURVE IN
TEMP BLOCK
1. SAVE CURVE IN
PERM BLOCK
```

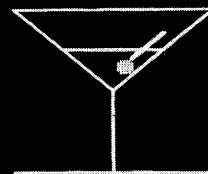

5. Then helpfully round out the requested sampling rate to the nearest acceptable value. It may also be curious about where you want the data stored. Then before you know it, it is off on its assigned task.

```
IT'S NOT HERE
```

6. We admit that, once in a while, after a long hard day, your micro-LINC may grow a bit testy when you ask it for information it hasn't got . . .

```
STUPID!
```

7. . . perhaps even peevish.

8. But its naturally sunny disposition inevitably wins out, and it hastens to make amends.

All of which goes to show that SPEAR micro-LINC's are just about the most approachable and flexible, state-of-the-art computers ever developed for laboratory use. They can be operated by researchers, engineers and technicians, etc., with no need for a basic computer background, and with only a few hours of training.

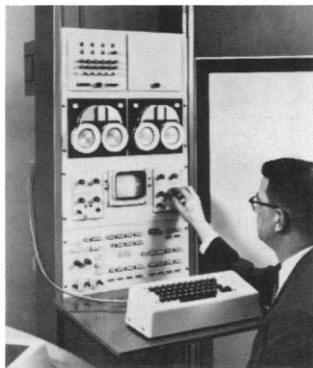

They are particularly effective in the biomedical and general scientific laboratory, because of the extensive library of biomedical and statistical analysis routines available to micro-LINC users.

Micro-LINC's are well-adapted to handling a wide variety of physiological and operant experiments. Not only can they store data or process it on-line, but they

can automatically control the entire experiment, displaying, on-line, the character of data being acquired so that the experimenter can alter parameters and observe effects.

Micro-LINC's utilize micro-circuits, for state-of-the-art speed and dependability. Micro-LINC II has a core memory which is expandable to 32,000 words. Micro-LINC III offers 2-microsecond memory cycling, in addition to the expandable memory.

Write today for complete details on micro-LINC models. If you would like to see one in operation, we will be happy to arrange a demonstration at our offices in Waltham.

SPEAR, INC.

*As a computer should that costs less than \$50,000.

335 BEAR HILL ROAD, WALTHAM, MASSACHUSETTS 02154

Thomas-Hoover MELTING POINT APPARATUS

- for official U.S.P. and similar capillary tube methods
- for interplant product standardization
- for teaching purposes

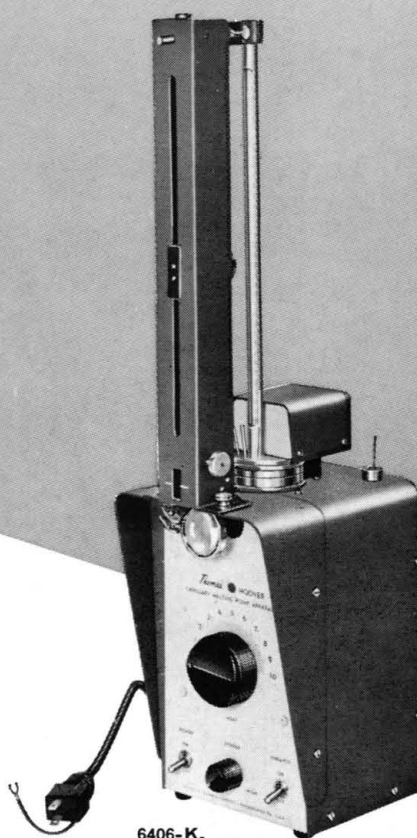

6406-H.

THOMAS-HOOVER "Uni-Melt."
A widely used, oil bath melting point apparatus—not a heating block—which meets specifications for the Official U.S.P. capillary method and gives fast, reproducible results. Range to 350°C.

Silicone bath enclosed for safety; electric stirrer; rapid, lagless electric heater controlled by autotransformer; and capillary vibrator (to insure uniform packing of sample) in compact case 11 inches high, protected from dust and air currents.

The heater coil, being immersed in the bath, transfers heat directly to the oil for optimum control of heating rate. The unitized design avoids the instability, misalignment, vibration, danger of breakage, etc., of improvised assemblies.

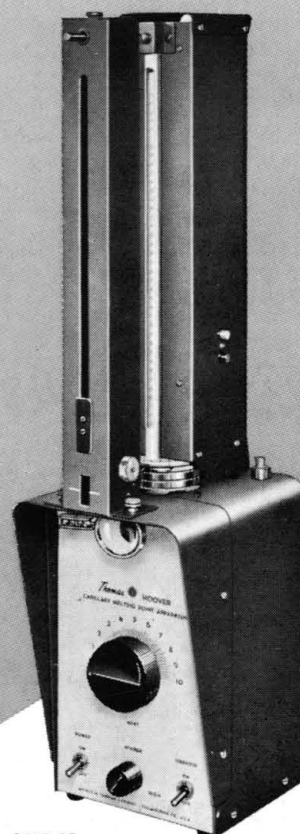

6406-H. Hoover "Uni-Melt," as above, with thermometer, melting point standards and supply of Silicone fluid and capillaries. For 115 volts, 60 cycles, a.c. 175.00

6406-K.

Periscopic Thermometer Reader. Provides magnified field of view of bath temperature and melting capillary contents in window above viewing lens. Permits operator to follow thermometer rise throughout its range while observing fusing of sample from same eyepoint.

6406-K. Hoover "Uni-Melt," identical with 6406-H but with addition of Periscopic Thermometer Reader 212.50

6406-M.

Thermometer Illuminator, Back Lighting. Provides superior, glareless illumination to thermometer scale. Meniscus is sharply visible, reducing eyestrain and increasing speed of readings, especially when used in combination with the Periscopic Reader.

6406-M. Hoover "Uni-Melt," complete with both Periscopic Reader and Thermometer Illuminator. 244.00

NOTE—Periscopic Reader, or Thermometer Illuminator, or both, can be added to basic model when desired.

For detailed description, see pp 678-680 of our 1965 catalog
or Bulletin 133—copy on request
