# Mightymite

Sometimes you can pack exceptional performance in a small frame. □ Take our Model HN. □ This bench-type centrifuge offers many features found only on higher-priced floor models. It accepts all Clinical accessories, plus fifty different heads and accessories to allow hundreds of combinations. Everything from micro-hematocrit heads to 100 ml. tubes both horizontal and angle.

It offers R.C.F.'s up to 6190 g. And you get automatic timer, stepless speed control, electric brake, and optional tachometer. □ Price: \$295. □ Small wonder we call the HN our Mightymite. For more information write for Bulletin HN, or call your IEC Dealer for immediate delivery.

burg) proposed a connection between  $\beta$  receptors and DNA synthesis, for sympathetically induced effects.

Biochemical differentiation was discussed by R. Kulka (Hebrew University of Jerusalem), W. Rutter, P. J. Keller, L. M. Sreebny (University of Washington), and L. C. U. Junqueira (University of Sao Paulo). Kulka finds that differentiation, with regard to formation of digestive enzymes by embryonic chick pancreas, occurs in separable phases. Surprisingly, secretion of the differentiating enzymes could be obtained in vitro from embryonic pancreas even before the later differentiation stage was complete.

Several interesting new hormonal relationships were presented. Shannon (USAF School of Aerospace Medicine, Texas) suggested that in some circumstances steroid levels in saliva can be pathognomic; Krainitz (University of British Columbia) reported a paradoxical increase in calcium of submaxillary saliva and gland, in rat, after parathyroidectomy.

Attendance at the conference was by invitation and was limited to 30 participants. The papers and discussion will be edited by Leon H. Schneyer and Charlotte A. Schneyer and published by Academic Press as a book entitled *Mechanisms of Salivary Secretion and Their Regulation*.

This was the second international conference to be devoted to aspects of salivary secretion and like the first, 4 years before in Seattle, was supported by the National Institute of Dental Research.

after ashing the delicate inorganic structure remains unaltered for precise quantitative analysis.

Tracerlab's new LTA-600 oxidizes samples with a cold plasma of atomic oxygen to leave inorganic constituents unaltered.

Permits more accurate quantitative elemental and structural analyses of plant and animal tissues, bones, coal, oil well cores, polymers, and radioactive materials. Prepares pure samples for atomic absorption spectrophotometry, mass spectrometry, emission spectroscopy, X-ray diffraction, and electron microscopy.

# how to get a quick tan

Or arctan for that matter. Trigonometric functions are solved in a few seconds on Mathatron, the \$5,000 digital computer.

Mathatron understands algebra — your language. Just tap in the expression the way you would write it. Use power-of-10 exponents, parentheses, square roots, decimal points. Answers from the tape printer are in decimal, with the point in the right place.

Mathatron is expandable, like the big computers. When you need it you can add memory, prewired programs, remote keyboard, paper tape reader/punch, or page printer. But you may prefer to keep yours small. It's a personal thing.

Over 80% of Mathatron owners have access to a big computer, but they prefer quick answers. Write us for the whole story.

**mathatron:** Program memory, 24 to 480 steps • Addressable storage, 4 to 88 registers • 9 significant digits, exponent, and sign • Number range  $\pm 10^{-42}$  to  $10^{+58}$  • Speed 100 accumulations per second • Optional prewired programs for special applications.
