nucleus, while the cytoplasm of hepatoma 9121 behaved like normal liver.

In the session on carbohydrates and fatty acids, Gullino described work with hepatomas implanted in rat ovaries to permit sampling of afferent and efferent blood in vivo. He found a reversed Pasteur effect: anaerobiosis resulted in a lowered glucose consumption and lactic acid production. Devlin reported that, whereas liver mitochondria catalyze both an intra- and extramitochondrial β -hydroxybutyrate dehydrogenase, the hepatoma mitochondria had only the intramitochondrial activity. The enzyme seemed to be significantly lower in all hepatomas than in normal liver. Weinhouse has found that in homogenates of the well-differentiated hepatomas lactate production was low and respiratory phosphorylation was not diminished. Intermixing of particulate and supernatant fractions from hepatomas with different glycolytic capacity made it clear that glycolysis could be regulated by the intensity of mitochondrial respiration. Fractionation of several enzymes by electrophoresis or column chromatography established that the highly differentiated hepatomas possessed enzymes characteristic of adult liver while the poorly differentiated hepatomas had enzymes characteristic of nonhepatic or fetal tissue. Fatty acid oxidation and synthesis in Morris hepatomas 5123C, 7793, 7795, and 7800 occurred but was insensitive to the nutritional state of the host, in contrast to normal liver (Abraham). Cholesterol synthesis was impaired in host liver presumably caused by cholesterol deposition, but in the tumors the rate was up to ten times that of normal liver (Ofner).

In the final session Wu reported that glutamine synthetase is present in some Morris hepatomas and is almost lacking in others. Cortisol induced the enzyme in the hepatomas to a much greater extent than in normal or regenerating liver. Rechcigl measured rates of catalase synthesis and degradation in hepatomas and in host liver. In one example, the catabolic rate was 2.4 percent per hour in both hepatoma and host liver, whereas the synthetic rate was 0.92 and 3.88 unit/g per hour, respectively, showing that the catalase concentration in the hepatoma was determined by decreased synthesis rather than by increased degradation. Sorof presented the latest findings on the h_2 soluble proteins of liver which bind liver carcinogens and inhibit cell replication in tissue culture. Evidence was presented linking the relevant properties of the h_2 proteins with arginase activity. Pitot reported new findings on the glucose repression of serine dehydrase synthesis with immunochemical techniques. Repression of enzyme synthesis was demonstrated in liver but in none of the hepatomas that were studied.

Although none of the studies demonstrated a molecular defect universally present in all hepatomas (such as the total loss or unique presence of an enzyme or individual regulatory protein, membrane component, or regulatory target) several appeared to be approaching this goal. While some investigators were discouraged by the many enzyme patterns that were evidently compatible with the neoplastic process, others were encouraged by the thought that many laboratories were now concentrating on experimental tumors that could be characterized by growth rate, karyotype, activities of a large number of enzymes, and responses to enzyme regulation. It appeared that although many of these hepatomas were nearly normal with respect to glycolysis, karyotype, and enzymes characteristic of normal liver, some showed drastic alterations in certain enzyme activities, and none of them appeared to be normal with respect to their response to normal controls. Many more strains of hepatoma need to be compared; hopefully the essential changes can be separated from nonessential changes, and one or more hepatomas with a minimum of molecular alterations will be discovered. Meanwhile, the multiplicity of enzyme patterns provided a sobering realization that cancer chemotherapy, lacking guiding principles, faces tremendous obstacles until key targets can be identified.

Calendar of Events-November

National Meetings

- 5-8. National **Agricultural Chemicals** Assoc., 34th annual mtg., Palm Springs, Calif. (National Agricultural Chemicals Assoc., 1145 19th St., NW, Washington, D.C. 20006)
- 5-8. American Society of Plastic and Reconstructive Surgeons, annual mtg., New York, N.Y. (P. Randall, ASPRS,

- 2850 Sixth Ave., Suite B, San Diego, Calif.)
- 5-9. American **Nuclear** Soc., Chicago, Ill. (O. J. Du Temple, Executive Secretary, American Nuclear Soc., 244 E. Ogden Ave., Hinsdale, Ill. 60521)
- 5-10. American Soc. of Agronomy, Washington, D.C. (Executive Secretary, 677 S. Segoe Rd., Madison, Wis. 53711) 5-10. Crop Science Soc. of America, Washington, D.C. (Executive Secretary,
- 677 S. Segoe Rd., Madison, Wis. 53711)
 5-10. Soil Science Society of America,
 Washington, D.C. (Executive Secretary,
 677 S. Segoe Rd., Madison, Wis. 53711)
- 6-8. Applied Superconductivity, conf. and exhibition, Austin, Tex. (G. D. Cody, Publicity Chairman, RCA Laboratories, Princeton, N.J. 08540)
- 6-8. **Ground-Water Hydrology**, natl. symp., San Francisco, Calif. (M. A. Marino, % AERA Hq., 1201 16th St., NW, Washington, D.C. 20006)
- 6-8. Speech Communication and Processing, annual conf., Cambridge, Mass. (G. Cushman, 555 Huntington Ave., Boston, Mass.)
- 6-8. Weather Forecasting, conf., Fort Worth, Tex. (K. C. Spengler, American Meteorological Soc., 45 Beacon St., Boston, Mass.)
- 6-9. Interstate **Postgraduate Medical** Assoc. of North America, annual mtg., Chicago, Ill. (R. T. Ragatz, Box 1109, Madison, Wis.)
- 7-9. Automatic Support Systems for Advanced Maintainability, 1967 symp., Clayton, Mo. (D. L. Reed, Box 4124, Jennings Station, St. Louis, Mo. 63136)
- 7-9. **Reliability Physics**, 6th symp., Los Angeles, Calif. [A. Coppola, Publicity Chairman, RADC (EMERS), Griffis AFB, New York 13440]
- 8-10. Eastern Analytical Symp., New York, N.Y. (E. G. Brame, Jr., Elastomer Chemistry Dept., duPont Experiment Sta., Wilmington, Del. 19898)
- 8-10. American Water Resources Assoc., 3rd annual conf., San Francisco, Calif. (A. A. Stone, International Engineering Co., 74 New Montgomery St., San Francisco 94105)
- 8-11. Respiratory Therapy, 4th annual conf., Boston, Mass. (M. J. Nicholson, 6 Beacon St., Suite 620, Boston 02108)
- 9-11. Gerontological Soc., Inc., 20th annual mtg., St. Petersburg, Fla. (Mrs. M. Adler, 660 S. Euclid St., St. Louis, Mo.)
- 10. Laboratory Animal in Gerontologic Research, symp., St. Petersburg, Fla. (R. H. Yager, Natl. Acad. of Sciences-Natl. Research Council, 2101 Constitution Ave., NW, Washington, D.C.)
- 11-12. American Acad. of Psychotherapists, annual conf., Warrenton, Va. (H. Rockberger, Conference Chairman, 44 South Munn Ave., East Orange, N.J. 07017)
- 11-15. American Soc. for **Cell Biology**, 7th annual mtg., Denver, Colo. (M. J. Moses, Box 2982, Duke Univ. Medical Center, Durham, N.C. 27706)
- 12-17. American Soc. of Mechanical Engineers, winter annual mtg., Pittsburgh, Pa. (A. B. Conlin, Jr., 345 E. 47 St., New York 10017)
- 13-15. Industrial Diamond Revolution, technical conf., Columbus, Ohio (Con-

Mightymite

k e e

Sometimes you can pack exceptional performance in a small frame.

Take

our Model HN.

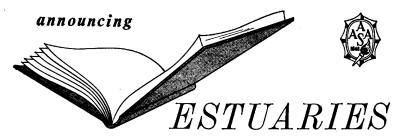

This bench-type centrifuge offers many features found only on higher-priced floor models. It accepts all Clinical accessories, plus fifty different heads and accessories to allow hundreds of combinations. Everything from micro-hematocrit heads to 100 ml. tubes both horizontal and angle.

It offers R.C.F.'s up to 6190 g. And you get automatic timer, stepless

speed control, electric brake, and optional tachometer. Price: \$295. Small wonder we call the HN our Mightymite. For more information write for Bulletin HN, or call your IEC Dealer for immediate delivery.

E EQUIPMENT CO.

300 SECOND AVENUE . NEEDHAM HEIGHTS, MASS. 02194.

Estuaries is the first comprehensive collection of scientific papers covering the comparatively new field of estuarine research. The volume contains seventy-one articles on physical and biological factors, geomorphology, sediments and sedimentation, microbiota, ecology, evolution, fisheries, human influences, and pollution. Estuaries is based on the 1964 Conference on Estuaries, Jekyll Island, Georgia; additional papers have been included to make it the definitive work on the subject. A supplementary bibliography

lists the more recent contributions to the discipline.

Edited by George H. Lauff and published in April 1967 by the American Association for the Advancement of Science, Estuaries consists of 776 pages, a supplementary bibliography of 437 entries, 1639 literature citations, 525 illustrations, 85 tables, and an index of more than 14,000 entries.

Cash orders by AAAS members \$24.00, regular price \$27.00.

The Bausch & Lomb High Intensity Grating Monochromator gives more useable light with any source. Its unique optical system has only two internal reflecting surfaces instead of the conventional four.

You can get exactly what you want in a monochromator now. And, you can be confident the modular "building-block" design will let you interchange gratings, slits and light sources for future needs. There are five grating assemblies. Each covers a section of the total range from $200m_{\mu}$ to 3.2μ . You dial the desired wavelength and you're sure of reproducibility. Choose the appropriate light source: Deuterium Arc, Tungsten Quartz-Iodine, high pressure or super pressure Mercury or a highly stable Xenon. Each one is precisely aligned, prefocused and centered.

Bausch & Lomb offers a complete line of standard and custom built monochromators with the widest range of Certified-Precision Gratings from the world's largest source. Write for Catalog 33-2098, Bausch & Lomb, 20746 Bausch St., Rochester, N. Y. 14602.
