

Keep your copies of **SCIENCE** always available for quick, easy reference in this attractive, practical binder. Simply snap the magazine in or out in a few seconds—no punching or mutilating. It opens **FLAT**—for easy reference and readability. Sturdily constructed, this maroon buckram binder stamped in gold leaf will make a fine addition to your library.

SCIENCE Binders hold one three-month volume of **SCIENCE**. They have a 3¼-inch back and 13 flat fasteners. \$4.00 each. Four binders, \$15.00.

For orders outside the United States add 50¢ per binder. Imprint: name of owner, add 85¢ per binder; year of issues, for example, 1968-3, add 60¢ per binder.

What a dish!

Combining Kimble know-how in laboratory glassware manufacturing with the Owens-Illinois leadership in plastics, we're happy to offer you polystyrene petri dishes of uncompromising quality and clarity. Kimble's new plastic petri dishes are sterile, ready to use.

Each disposable dish has a chevron reference spot on the side of the bottom for orientation in serial dilutions.

Ask your lab supply dealer to show you Kimble's newest entry in the plastic labware field.

Another of a continually growing line of glass and plastic products you can rely on. Kimble . . . proudly answering your changing needs with a single source of the finest labware items available.

OWENS-ILLINOIS

maker of Kimble Products
Toledo, Ohio 43601 

Group discussions can be much more beneficial for all with the AO Microstar Microscope and Viewing Screen.

It's a helpful, practical method of demonstrating specimen slides to colleagues or class. A lineup at the microscope, waiting so each person can see, delays any group discussion. Too much time is lost, too much explanation missed. But you can make your point—clearly, once and for all—with the Viewing Screen, which mounts quickly and easily on the trinocular body of the

pacesetting Microstar® Microscope made by American Optical.

Of course, the screen image is bright, crisp and in-focus over the entire area. That's because the remarkable infinity-corrected optical system of the Microstar Microscope produces outstanding image quality—improved definition and color. The magnification at screen plane is 7.5 times the objective magnification.

We'll be glad to prove how beneficial it is. Just ask for a demonstration. We'll also show you other AO® Microstar exclusives: Autofocus stop, dual viewing, simplified photomicrography (the Viewing Screen is interchangeable with any camera from the Microstar's wide selection). If you'd like a copy of our free brochure before we get together, just write.
