Meetings

Bone-Seeking Radionuclides

Radiation-induced cancer was the central theme of the international symposium on delayed effects of bone-seeking radionuclides, held 12 to 14 September 1967 at Sun Valley, Idaho. Six countries were represented in the 28 invited papers.

H. Spiess (University Children's Clinic, Göttingen, Germany) outlined his follow-up of about 1000 of some 2000 German patients injected with ²²⁴Ra in the years 1944 to 1951. His was the first presentation of these studies to an English-speaking audience, and there was very keen interest. To date, 50 bone sarcomas have appeared, 35 of them in the 206 patients irradiated as children. For the bone sarcoma cases, the smallest total injected amount was about 400 microcuries of 224Ra (in an 8-year-old child and also in a 70year-old adult). When the dose-conversion factors of Maletskos are used, the radiation dose for the adult's skeleton was between 20 and 200 rad. Short-lived ²²⁴Ra (3.6 days) appears considerably more toxic rad-for-rad than the long-lived ²²⁶Ra (1600 years). The greater effectiveness of 224Ra may be due to the fact that it decays quickly, before the apposition of new bone mineral can shield the living cells from α -irradiation.

A. J. Finkel (Argonne National Laboratory) reported 23 bone sarcomas and 16 neoplasms of the skull in 217 radium-containing persons. In all but one of these tumor cases, the residual amount of 226 Ra in the body exceeded 0.5 μ c. In this one case, the amount of 226 Ra at tumor diagnosis (about 40 years after the start of exposure) was about 0.16 μ c. This patient's peak content while dial painting was an estimated 1.2 μ c.

R. D. Evans (Massachusetts Institute of Technology) summarized the studies at M.I.T. on persons exposed to ²²⁶Ra and ²²⁸Ra. There have been 28 bone sarcomas and 9 head carcinomas in the 90 persons whose skeletal dose exceeded 1200 rad. However, none of

these tumors has been observed in the 406 persons of this series whose doses were lower. A linear nonthreshold relation for the induction of these tumors seems extremely unlikely. Evans calculates that for a residual 1 μ c of ²²⁶Ra in the body after 40 years, the cumulative radiation dose to the 7-kg skeleton of a standard man is about 2300 rad, and about 3200 rad to the 5-kg skeleton of a standard woman.

R. Mole (Harwell, England) assembled experimental data supporting his hypothesis that the radiation dose from a given radionuclide required to produce a given incidence of bone cancer is rather similar for a variety of mammals including man.

R. O. McClellan (Lovelace Foundation, Albuquerque, N.M.) presented an excellent and detailed review of the neoplasms induced by high doses of ⁹⁰Sr in experimental animals. When single high doses of ⁹⁰Sr are given to adult experimental animals, osteosarcomas frequently predominate. However, when repeated doses of ⁹⁰Sr are received early in life, the hematopoietic neoplasms may form a greater risk.

G. N. Taylor (University of Utah) reported that in beagles injected as adults, squamous-cell carcinomas in the head sinuses have been induced from ²³⁹Pu, ²²⁶Ra, and ⁹⁰Sr; liver tumors from ²³⁹Pu; and eye melanomas from ²²⁸Ra and ²²⁶Ra. In all cases these tumors arose within heavily irradiated tissue. The induction of these softtissue tumors was much less frequent than the induction of osteosarcomas.

Y. I. Moskalev (Ministry of Public Health, Moscow) provided the concluding paper, which was read in English by C. Comar (Cornell University). For many in the audience, this was an introduction to Russian radiobiology. Experiments on the delayed effects of internally deposited radionuclides were reported for 5000 animals, mostly rats. Whereas no osteosarcomas were observed in 722 control rats or in 1365 rats injected with 0.005 to 2.5 μc of 90 Sr per kilogram of body weight, osteosarcomas developed in 5 (7.4 per-

cent) of 68 rats given orally 0.5 μ c of ²³⁹Pu daily from 3 months of age until death 370 days later. The average radiation dose to the bone was only 57 rad at death, and the inducing dose was likely much lower. Skeletally deposited ²³⁹Pu is very effective in inducing bone cancer. Radiation protectionists throughout the world should take note of this finding.

Other senior authors were: D. Berliner, B. I. Bleaney, H. D. Bruner, L. K. Bustad, W. J. Clarke, T. Domanski, J. H. Dougherty, P. W. Durbin, M. P. Finkel, M. Goldman, W. S. S. Jee, C. J. Maletskos, L. D. Marinelli, J. H. Marshall, C. W. Mays, J. Müller, M. Rosenthal, F. W. Spiers, B. J. Stover, D. M. Taylor, and J. Vaughan.

This symposium was organized under the direction of T. F. Dougherty, head of the Radiobiology Division of the Anatomy Department at the University of Utah. It was supported by the U.S. Atomic Energy Commission. The proceedings, to be published by the University of Utah Press, should appear about October 1968.

Charles W. Mays Radiobiology Division, University of Utah, Salt Lake City, 84112

7. Industrial Pharmaceutical Technology,

Right! But the YSI Model 66 Temperature Clock actually can't give you the correct time or temperature. It can do these three things:

- indicate mean temperature and degree hours.
- indicate mean temperature and degree hours difference between two points.
- indicate mean temperature and degree hours above or below an externally set temperature threshold.

The battery operated YSI Model 66 Temperature Clock can operate continuously for up to six months in a range from -29°C to +49°C. Usable information is available after as little as ten hours.

If you have a project involving mean temperature, we may be able to help you with it for \$345.00.

This is the most powerful, yet easiest to use, calculating/computing system available. It's also the most versatile. You can create your own individualized system by selecting true building block modules from a family of peripheral devices larger than all competitive calculating products combined. Start with a basic 300 Series calculator if you like; add accessories as needs grow without worrying about compatibility, obsolescence, retraining or special program languages. The 370 will loop, branch, perform subroutines and manipulate arrays. You can have up to 480 steps of program storage and up to 64 separate data storage registers, also automatic typewriter or teletypewriter output, CRT graphic display and time-sharing basic keyboards for your associates.

The 370 solves these problems...
for Engineers and Scientists:
Inversion of 6 x 6 Matrices,
Roots of Equations,
Up to 7 Simultaneous Equations,

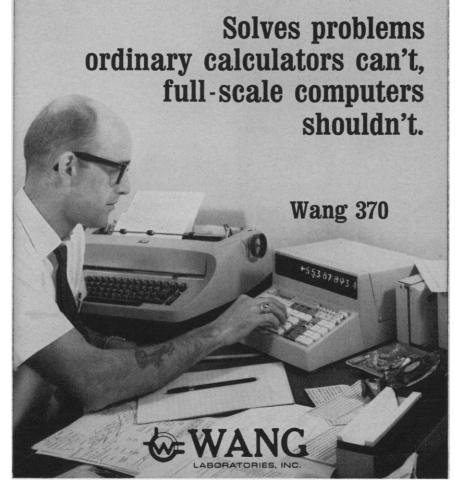

Fourier Analysis. for Statisticians:

Mean, Variance and Standard Deviation, 2nd-order Regression Analysis, Distributions such as: Binomial, Normal Probability, etc.

And also:

General Nth-order Regression, Multiple Regression, Analysis of Variance, Factorial Design.

These and many other highly-useful programs are furnished free in a 250 page program library. Three volumes of basic calculator programs and a two-volume 370 reference manual are also offered. Call now for complete details.

like the S&S series of great RIBBON ashfree filter papers

"Ribbon" means only one thing to a chemist. It means the S&S trademark for its series of highest grade filter papers for use in quantitative analysis. S&S grades are identified by color on the box. Scientists who use these analytical working tools claim they are the highest quality, best performing, lowest ash quantitative filter papers on the market. Select from these premium Ribbon grades.

No. 589 BLACK RIBBON

Rapid. Soft. Loose texture. For coarse and gelatinous ppts.

Medium speed and retention. Quantitative gravimetric analysis.

High wet-strength. For very fine precipitates.

No. 589 GREEN RIBBON

Extra thick. Provides increased retention without loss of filter speed.

No. 589 BLUE RIBBON

Dense. Highly retentive. Filtration of crystalline materials.

S&S 589 Ribbon Series Ash-Free Filter Papers—world's finest, but no price premium

The AO Water Bath Shaker was built to give trouble-free service. And it has in hundreds of laboratories. Sturdy, leak-proof construction features a large volume reservoir made of cast aluminum and coated with Teflon. A ball-bearing eccentric drive and nylon rollers for rack support assure a smooth, quiet shaking action.

You can use this versatile workhorse for a wide variety of reactions requiring either agitation and/or incubation. Temperature range is 25°C to 120°C, with temperature controlled to within ±0.5°C. Choose any shaking speed from 50 to 200 cycles per second. Stroke length is adjustable at three different settings. And there's a wide variety of trays available to hold virtually any flask, beaker or test tube.

It isn't often you find such a dependable, well-proven instrument. For literature and ordering information, contact your distributor or write to us.

Who else could build better high-performance, low-cost log meters? Nobody!

Only Philbrick/Nexus with its broad analog capability and its proven line of operational amplifiers and log modules could develop such thoroughly reliable, wide dynamic range log instruments.

Model 5100 Log Ratio Meter offers quick and easy wide-range measurements on a single, four-decade scale. With a minimum of switching it measures voltage, current, resistance, voltage or current ratios and voltage or current sums. Battery operation offers portability and elimination of ground loops. Expected battery life is 2000 hours. Price: \$325. Line operation and output are optional.

Model 5101 Log Null Meter will null to $10\mu v$. It provides eight decades of signal observation and reacts with increased sensitivity while at null. This makes possible a null adjustment to $\pm 0.03\%$ of full scale. Model 5101 operates on regular line voltage or is available for 220V operation. Built-in self-protection prevents unusually high voltage inputs from damaging the meter. The unit has output capability. Price: \$375. Contact your Philbrick/Nexus sales representative for complete details and specifications. Or write, Philbrick/Nexus Research, 25 Allied Drive at Route 128, Dedham, Massachusetts 02026.

Want current fluorometric data in a cumulative handbook?

If you do, we'll be glad to put your name on our distribution list to get the following information as we publish it:

- data sheets on decay times
- application notes
- instrumentation techniques
- digests of pertinent papers

Direct decay time measurements of fluorescent properties, only calculated by older methods, are being generated by TRW Nanosecond Spectral Source System users in physical, chemical, biological, and medical labs and by our applications research staff. This material is yours for the asking, prepunched to fit an attractive 6 x 9 stiff binder. Clip the coupon below and mail it to us.

TRW INSTRUMENTS

139 Illinois Street, Dept. S-868 El Segundo, California 90245 (213) 535-0854

() I want to be on your mailing list to receive fluorometric data at no charge.

() I enclose \$1.75 for the fluorometric data binder.

Huron View Blvd., Ann Arbor, Mich.) 31-1. Symposium on **Social Behavior**, 2nd, Oxford, Ohio. (R. A. Hoppe, Dept. of Psychology, Miami Univ., Oxford 45056)

31-1. American Soc. of **Tropical Medicine and Hygiene**, Atlanta, Ga. (G. M. Jeffery, P.O. Box 295, Kensington, Md.)

31-2. Society of **Photographic Scientists** and **Engineers**, Washington, D.C. (R. A. Jones, Papers Chairman, Mail Sta. 68, Perkin-Elmer Corp., Norwalk, Conn. 06852)

International and Foreign Meetings

September

22–28. International Congr. of History of Medicine, 21st, Siena, Italy. (Professor Stroppiana, Kiale Universita, 34/A Rome)

23-25. International Congr. of Psychodrama and Sociodrama, 3rd, Prague, Czechoslovakia. (J. L. Moreno, 259 Wolcott Ave., Beacon, N.Y. 12508)

23-26. Institute of Physics and the Physical Soc., Culham, Abingdon, England. (Meetings Officer, 47 Belgrave Sq., London, S.W.1)

23-27. International Soc. of Cybernetic Medicine, 5th, Naples, Italy. (P. Battarra, S.I.M.C., 348 Via Roma, Naples)

23-28. South African Intern. Ophthalmological Symp., 1st, Johannesburg, S. Africa. (Dept. of Ophthalmology, Medical School Hospital, Johannesburg)

24-26. Power Sources Symp., 6th, Brighton, England. (D. H. Collins, Joint Services Electrical Power Sources Committee, POB 136, 26 Wellesley Rd., Croydon, Surrey)

136, 26 Wellesley Rd., Croydon, Surrey) 24-28. Congress of Neurological Surgeons, Toronto, Ont., Canada. (J. M. Thompson, 1955 Blossom Way South, St. Petersburg, Fla. 33712)

24-28. Symposium on Technical and Biological Problems of Control, Erivan, U.S.S.R. (A. S. Iberall, General Technical Services, 8794 W. Chester Pike, Upper Darby, Pa. 19082)

25-30. International Union of the History and Philosophy of Science, 12th, Paris, France. (R. Taton, 3, rue Gay Lussac, Paris 5E)

26-28. International Congr. of Sociometry and Social Psychology, 1st, Prague, Czechoslovakia. (J. L. Moreno, 259 Wolcott Ave., Beacon, N.Y. 12508)

30-3. European Congr. of Allergology, Berlin, Germany. (H. Herxheimer, Rudolph Virchow Krankenhaus, Augustengurger Platz 1, Berlin 65)

30-5. **Physicists** Conf., Karlsruhe, Germany. (H. Schopper, POB 947, 75 Karlsruhe)

October

4-11. International College of Surgeons, 16th, Tokyo, Japan. (Secretary General, 1516 Lake Shore Dr., Chicago, Ill. 60610)

6-10. Electrochemical Soc., 134th, Tokyo, Japan. (c/o Japan Cement Engineering Assoc., No. 1, Akasaka-Daimachi, Minato-Ku, Tokyo)

7-9. International Gel Permeation Chromatography Seminar, 6th, Miami Beach, Fla. (Chairman, The Seminar, c/o Waters Associates, Inc., 61 Fountain St., Framingham, Mass. 01701)

7-11. International Federation for Preventive Medicine and Hygiene, 5th, Rome, Italy. (Via Filippo Civinni 37, Rome)

EMI

$\lambda = 1,650-8,500+A$ ENI=2x10⁻¹³lm.

.. the nuisance of multiple detectors! One EMI photomultiplier type 9558Q covers UV, visible and infra red. The 9558Q is a two inch diameter end window tube with eleven venetian blind dynodes having highly stable CsSb secondary emitting surfaces. The Spectrasil window gives better transmission of UV than natural quartz. The photocathode is the S-20 (tri-alkali) type employing unique EMI geometry. The results are high quantum efficiency (23-25% at peak) and exceedingly low dark current, (typically .002uA, at 200 A/L). Where the exact wavelength is unknown, or the entire spectrum is under investigation, the 9558Q enables the work to proceed without changing detectors.

Where the red sensitivity of the tri-alkali photocathode is most important, and the UV region is not, the 9558B, with a pyrex window (but all the other desirable characteristics of the 9558Q) may be substituted at much lower cost. Tubes can be specially selected for difficult astronomical tasks, laser range finders, red channels of flying spot scanners, etc.

Write for details on S-20 tubes in a complete range of sizes.
