Philbrick/Nexus DC log amplifiera slip stick in 2.65 cubic inches

Quicker than you can operate your favorite slide rule, Model 4350 Log Amplifier will calculate the logarithm of a positive voltage or current, or solve the positive antilog of an input voltage. Model 4351 performs the same functions on negative voltage or current.

The combination of two Philbrick/Nexus log amplifiers multiplies and divides. Add scaling resistors and you can compute arbitrarily selected powers and roots. Units are fully temperature compensated for use over wide temperature ranges.

Units are fully encapsulated and measure 1.4" x 2.7" x .7". They feature fast response and a wide 6-decade dynamic range. Priced well below competition at only \$95. Contact your Philbrick/Nexus sales representative for complete details and specifications. Or write, Philbrick/Nexus Research, 25 Allied Drive at Route 128, Dedham, Mass.

No other pumps infuse fluids more reproducibly.

You can't beat syringe pumps for uniformity of flow, reproducibility, and their ability to handle fluids under clean, even sterile conditions. And Sage's line of more than 20 different pumps includes large and small capacity versions, discrete rate and infinitely variable rate models. Infusion/ withdrawal models are available. There is even one, the new unlimited volume Model 220, which pumps continuously from a reservoir.

The Model 255-2 (shown above) permits you to dial any desired flow rate from 0.02 μ l/hr to 98 ml/hr, holds single syringes up to 100 cc capacity or two syringes up to 50 cc (for double channel pumping). Other Series 255 pumps cover different rate ranges. Price \$420. Other models from \$160. Write or call for complete data.

on-line dpm computation

first fully computerized liquid scintillation spectrometer

Using an internal core memory computer, the SL 40 gives you direct readout of computed dpm data...for variably quenched single- or dual-isotope samples... based on either the external standard or channels ratio method of quench correction.

All required calibration curves, coefficients, etc. are stored in a 1024-word core memory (expandable to 2048 words). A single switch selects the preadjusted window for optimum counting of any common single-or dual-label sample. Isotope ratios and standard error are automatically computed for each channel.

The SL 40 is delivered with seven standard pre-programmed operating modes. Additional programs can be provided for special application requirements, now or in the future. For complete technical information, contact:

Now! A simple way to join glass tubing

MAN-O-LOK fittings provide you with a do-it-yourself laboratory glass system! For organic chemistry, handling gases, fluids, vacuum or pressure. You watch your chemical reaction take place through transparent Teflon* joints.

You can build modular systems step by step . . . joining tubes, components, fittings and glassware. Where intricate systems for your experiment are not available, you can tailor-make your own apparatus without glassblowing. Any glassware can now be built into a system without fusing or standard joints!

HOW MAN-O-LOK WORKS

MAN-O-LOK (Pat. Pend.) is a simple clear Teflon fitting which shrinks tightly around tubing with the application of heat. The exclusive Plastic "O" Rings shrink and melt assuring positive seal under Vacuum or Pressure. Fluids flowing through the fittings contact only highly corrosion resistant Teflon.

HOW MAN-O-LOK IS APPLIED

Repair kit complete with applicator and 54 connectors for repairing or connecting tubing from 5 mm to 12 mm O.D.

That's what an Assistant Professor asked us when he heard about TIAA's low life insurance costs.

It's true. At his age 30 the annual premium for a 20-Year Home Protection policy providing \$50,000 initial amount of insurance is \$159.00. The first-year dividend, based on our current dividend scale, is \$61.00, making a net payment of \$98.00. Dividends, of course, are not guaranteed.

The Home Protection plan is level premium Term insurance providing its largest amount of protection initially, reducing by schedule each year to recognize decreasing insurance needs. This is just one example of the many low-cost TIAA plans available. If you need more protection for your family, ask us to mail you a personal illustration with figures for a policy issued at your age. We'll also send the Life Insurance Guide describing other TIAA policies.

ELIGIBILITY

Eligibility to apply for this or other TIAA life insurance is limited to persons employed at the time of application by a college, university, private school, or other nonprofit educational or scientific institution that qualifies for TIAA eligibility.

9524-B

Another superb photomultiplier from

EMI

Dark current at 200 Amps/Lumen typically 2X10⁻⁹ Amps

A rugged versatile tube utilizing the special EMI CsSb box and grid design. Typical gain of 3×10^6 at 1100 volts makes it an excellent tube for portable instruments. Variants are available with "S", S-10, and S-20 cathodes as well as with quartz windows for U.V. work.

The characteristics of the 9524-B exemplify the type of performance to be expected from the more than sixty different photomultipliers made by EMI in sizes from 1 to 12" in diameter. Most types are available from stock in the U.S.
