
SCIENCE

Index to Volume 162 October–December 1968

Philip H. Abelson, Editor

Published by the
American Association for the Advancement of Science
1515 Massachusetts Ave., NW, Washington, D.C. 20005
© 1968

No.	Date of Issue	Pages	No.	Date of Issue	Pages
3849	4 October	1–200	3856	22 November	843–950
3850	11 October	201–294	3857	29 November	951–1042
3851	18 October	295–402	3858	6 December	1043–1210
3852	25 October	403–486	3859	13 December	1211–1318
3853	1 November	487–610	3860	20 December	1319–1426
3854	8 November	611–710	3861	27 December	1427–1518
3855	15 November	711–842			

Names of authors of books reviewed are printed in SMALL CAPITALS.

A

Aaronson, S. A., and G. J. Todaro: Basis for acquisition of malignant potential by mouse cells cultivated in vitro, 1024
AAAS: Annual meeting, 143, 285, 380, 478, 588, 701, 815, 929, 1029, 1152, 1307
Abelson, P. H. (*editorials*): Broadening the participation of the colleges, 517; Computer-assisted instruction, 855; Deep earth sampling, 623; Lee DuBridge, 1435; The inexorable exponential, 221; A new base for political support of academic science, 1079
Above and beyond, R. J. JOHNSON (Ed.), *book review* by F. C. Durant, III, 1259
Academic science and the federal government, E. Q. Daddario, 1249

Actions chimiques et biologiques des radiations, M. HAISSINSKY (Ed.), *book review* by M. M. Elkind, 1261
Activation of Hageman factor by L-homocystine, O. D. Ratnoff, 1007
Adee, R. R. *See* Sanders, C. L.
Adhesion: mechanisms that assist or impede it, R. E. Baier *et al.*, 1360
Adkisson, P. L.: *book review* of Insects and physiology, 1261
Adler, C.: Aquatic harvests (*letter*), 956
Administration of NASA, The (*editorial*), D. Wolfle, 753
Adolescence and drugs (*letter*), M. Feldberg, 307
Adrenaline: mechanism of action on the pacemaker potential in cardiac Purkinje fibers, O. Hauswirth *et al.*, 916
Advances in biology of the skin, W. MON-
TAGNA and F. HU (Eds.), *book review* by A. B. Lerner, 345
Affinity site labeling of a mouse myeloma proteins which binds dinitrophenyl ligands, H. Metzger and M. Potter, 1398
Again the walls are breached (AAAS), W. G. Berl, 1411
Age of bed V, Olduvai Gorge, Tanzania, L. S. B. Leakey *et al.*, 559
Aiello, P. V. *See* Friedman, I., *et al.*
Airborne pheromones, E. C. Hertzler, 813
Ajl, S. J. *See* Reeves, H. C., *et al.*
Aldrich, D. G., Jr.: World food and population crisis (AAAS), 1309
Alexander, P., Jr. *See* Monette, F. C., *et al.*
Allen, F. H., Jr. *See* German, J., *et al.*
Allen, J. H. *See* Miller, W. H., *et al.*
Allen, P. J. *See* Christie, R. W., *et al.*

INDEX TO VOLUME 162

- ALLER, L. H. *See* MIDDLEHURST, B. M.
 Allison, R. D. *See* Schaefer, K. E., *et al.*
 Allografts in genetically defined rats: difference in survival between kidney and skin, E. White and W. H. Hildemann, 1293
 Allott, G. *See* Morse, W.
 Alper, C. A. *See* Propp, R. P.
 Alpha-chain disease: a new immunoglobulin abnormality, M. Seligmann *et al.*, 1396
 Alveolar macrophages: reduced number in rats after prolonged inhalation of lead sesquioxide, E. Bingham *et al.*, 1297
 Amazonian fauna: protectors and exploiters (*letters*), A. M. Fletcher and J. D. Perkins, 53
 American Indian mythology, A. MARRIOTT and C. K. RACHLIN, *book review* by K. Luomala, 785
 American locomotives, J. H. WHITE, JR., *book review* by C. W. Condit, 1471
 American sociology, T. PARSONS (Ed.), *book review* by A. W. Gouldner, 247
 Amino acid composition of organic matrix in calcareous oolites, R. M. Mitterer, 1498
 2-Amino-5-(1-methyl-5-nitro-2-imidazolyl)-1,3,4-thiadiazole: a new antimicrobial agent, G. Berkelhammer and G. Asato, 1146
 AMOROSO, E. C. *See* LAMMING, G. E.
 Amyloidosis induced in mice by *Escherichia coli* endotoxin, W. F. Barth *et al.*, 694
 Anaerobic brain function: effects of stagnant and anoxic anoxia on persistence of breathing in reptiles, D. A. Belkin, 1017
 Anderson, A. E., Jr., *et al.*: Selective venting of cigarette smoke in dichotomous ducts and preserved human bronchi, 668
 Anderson, D. W. *See* Hickey, J. J.
 Anderson, J. D. *See* Eshleman, V. R., *et al.*
 Anderson, P. W., *et al.*: Quality education: hanged without a trial (*letters*), 850
 ANDERSON, T. W. (Ed.), Collected papers of S. S. Wilks, *book review* of, 991
 Anfinsen, C. B. *See* Cuatrecasas, P., *et al.*
 Animal function, M. S. GORDON, *book review* by W. J. Bock, 1263
 Animal locomotion, J. GRAY, *book review* by M. Hilderbrand, 249
 Animal orientation and navigation, R. M. STORM (Ed.), *book review* by D. R. Griffin, 344
 Animal reproduction and artificial insemination (*meeting report*), E. S. E. Hafez, 703
 Antarctic research symposium (*AAAS*), L. O. Quam, 380
 Antibodies to pneumococcal polysaccharides: relation between binding and electrophoretic heterogeneity, J. H. Pincus *et al.*, 667
 Anton, S. *See* Anton-Tay, F., *et al.*
 Anton-Tay, F., *et al.*: Brain serotonin concentration: elevation following intraperitoneal administration of melatonin, 277
 Aquatic harvests (*letter*), C. Adler, 956
 Archeology of ancient China, K. Chang, 519
 Armington, J. C.: *book review* of Human color perception, 785
 Armstrong, R. W.: Wedge dislocation as the elastic counterpart of a crystal deformation twin, 799
 Aronow, A. *See* O'Malley, B. W., *et al.*
 Art and science: the analysis and communication of biological form (*AAAS*), P. C. Ritterbush, 1307
 ARTHUR, D. R. *See* CARTHY, J. D.
 Asato, G. *See* Berkelhammer, G.
 Ash, K. O.: Chemical sensing: an approach to biological molecular mechanisms using difference spectroscopy, 452
 Asher, D. M. *See* Gajdusek, D. C., *et al.*
 ASSALI, N. S. (Ed.), Biology of gestation, *book review* of, 447
 Astin, A. W. *See* Anderson, P. W., *et al.*
 Astronomical evidence for nucleosynthesis in stars, G. Wallerstein, 625
 Atkinson, R. C., and H. A. Wilson: Computer-assisted instruction, 73
 Atmospheric aerosols: increased concentrations during the last decade, J. T. Peterson and R. A. Bryson, 120
 Attenuation of low-frequency sound in freshwater, D. G. Browning *et al.*, 1120
 Audiogenic seizure prone (*asp*): a gene affecting behavior in Linkage Group VIII of the mouse, R. L. Collins and J. L. Fuller, 1337
 Aurbach, G. D. *See* Granner, D., *et al.*
 Australia: too many Ph.D.'s (*letter*), R. L. S. Willix, 852
 Autoimmune chorioretinitis in rhesus monkeys, E. M. Lerner II *et al.*, 561
 Automobile engines: pollution and power (*letter*), I. Katz, 1221
 Automobile exhaust standards (*letter*), L. S. Cressler, 620
 Ayala, F. J.: Genotype environment and population numbers, 1453
 Azen, E. A., and O. Smithies: Genetic polymorphism of C'3 (β_{1c} -globulin) in human serum, 905
- B**
- BACON, N. S. (Ed.), Henry J. Sigerist: autobiographical writings, *book review* of, 1113
 Baehner, R. L., and M. L. Karnovsky: Deficiency of reduced nicotinamide-adenine dinucleotide oxidase in chronic granulomatous disease, 1277
 Bagley, J. M.: Water importation into arid lands (*AAAS*), 478
 Baier, R. E., *et al.*: Adhesion: mechanisms that assist or impede it, 1360
 Bailar, J. C., Jr.: *book review* of Ligand reactivity and catalysis, 1380
 Bain, G. *See* Kornetsky, C.
 Baker, R. M. L., Jr.: Hydrofoils: optimum lift-off speed for sailboats, 1273; UFO phenomena (*letter*), 959
 Balachandran, N. K. *See* Donn, W. L., *et al.*
 Baldwin, R. B.: Lunar mascons: another interpretation, 1407
 Balfe, J. W., *et al.*: Red-cell transport defect in patients with cystic fibrosis and in their parents, 689
 Ballast overboard! (*letter*), K. O. Emery, 308
 Baltimore, D., and A. S. Huang: Isopycnic separation of subcellular components from poliovirus-infected and normal HeLa cells, 572
 Banks, P. O. *See* Gomberg, D. N., *et al.*

Instructions for Contributors

The Editors of *Science*

General Editorial Policies

All papers submitted are considered for publication. The author's membership or lack of membership in the AAAS is not a factor in selection. Papers are accepted with the understanding that they have not been published, submitted, or accepted for publication elsewhere. Authors will usually be notified of acceptance, rejection, or need for revision in 4 to 5 weeks (Reports) or 6 to 10 weeks (Articles).

Types of papers. Six types of signed papers are published: Articles, Reports, Letters, Technical Comments, Meeting Reports, and Book Reviews. Familiarize yourself with the general form of the type of paper you wish to submit by looking over a recent issue of the journal, and then follow the instructions for that type of paper.

Reviews. Almost all Articles, Reports, and Technical Comments, whether solicited or not, are sent to two or more outside referees for evaluation of their significance and soundness. Forms showing some of the criteria reviewers are expected to consider are available on request.

Editing. Papers are edited to improve the effectiveness of communication between the author and his readers. The most important goal is to eliminate ambiguities. In addition, improvement of sentence structure often permits readers to absorb salient ideas quickly. When editing is extensive, with consequent danger of altered meanings, papers are returned to the author for correction and approval before type is set. Authors are free to make additional changes at this stage.

Proofs. One set of galley proofs or an equivalent is provided for each paper. Keep alterations to a minimum, and mark them only on the galley, not on the manuscript. Extensive alterations may delay publication by 2 to 4 weeks.

Reprints. An order blank for reprints accompanies most proofs. Special arrangements can be made to obtain reprints of letters and book reviews.

Writing Papers

Organize your material carefully, putting the news of your finding or a statement of the problem first, supporting details and arguments second. Make sure that the significance of your work will be apparent to readers outside your field, even if you feel you are explaining too much to your colleagues. Present each step in terms of the purpose it serves in supporting your finding or solving the problem. Avoid chronological steps, for the purpose of the steps may not be clear to the reader until he finishes reading the paper.

Provide enough details of method and equipment so that another worker can repeat your work, but omit minute and comprehensive details which are generally known or which can be covered by citation of another paper. Use metric units of measure. If measurements were made in English units, give metric equivalents.

Avoid specialized laboratory jargon and abbreviations, but use technical terms as necessary, defining those likely to be known only in your field. Readers will skip a paper they do not understand. They should not be expected to consult a technical dictionary.

Choose the active voice more often than you choose the passive, for the passive voice usually requires more words and often obscures the agent of action. Use first person, not third; do not use first person plural when singular is appropriate. Use a good general style manual, not a specialty style manual. The University of Chicago style manual, the style manual of the American Institute of Physics, and the *Style Manual for Biological Journals*, among others, are appropriate.

Manuscripts

Prepare your manuscript in the form used by *Science*. Use a good bond paper for the first copy. Submit two

carbons. Do not use "erasable" or thin paper for the first copy. Double-space title, abstracts, text, signature, address, references (including the lines of a single reference), figure legends, and tables (including titles, columns, headings, body, and footnotes). Do not use single-spacing anywhere. Put the name of the first author and the page number in the upper right-hand corner of every page.

Paging. Use a separate page for the title: number it page 1. Begin each major section—text, references and notes, and figure legends—on a new sheet. Put each table on a separate sheet. Place figure legends and tables after the references.

Titles. Begin the title with a word useful in indexing and information retrieval (not "Effect" or "New").

References and Notes. Number all references to the literature, footnotes, and acknowledgments in a single sequence in the order in which they are cited in the text. Gather all acknowledgments into a single citation, and keep them short ("I thank," not "I wish to thank"). Cite all references and notes but do not cite them in titles or abstracts. Cite several under one number when feasible. Use *Chemical Abstracts List of Periodicals* for abbreviations of journal names. If the journal is not listed there, provide the full name. Use the following forms:

- Journal:* H. Smith, *Amer. J. Physiol.* **98**, 279 (1931).
Book: F. Dachille and R. Roy, *Modern Very High Pressure Techniques* (Butterworth, London, 1961), pp. 163-180.
Chapter: F. Dachille and R. Roy, in *Reactivity of Solids*, J. H. De Boer, Ed. (Elsevier, Amsterdam, 1960), p. 502.

Illustrations. Submit three copies of each diagram, graph, map, or photograph. Cite all illustrations in the text and provide a brief legend, to be set in type, for each. Do not combine line drawings and photographs in one illustration. Do not incorporate the legend in the figure itself. Use India ink and heavy white paper or blue-lined coordinate paper for line drawings and graphs. Use heavier lines for curves than you use for the axes. Place labels parallel to the axes, using capital and lower-case letters; put units of measurement in parentheses after the label—for example, Time (sec). Plan your figures for the smallest possible printed size consistent with clarity.

Photographs should have a glossy finish, with sharp contrast between black and white areas. Indicate magni-

fication with a scale line on the photograph.

Tables. Type each table on a separate sheet, number it with an arabic numeral, give it a title, and cite it in the text. Double space throughout. Give each column a heading. Indicate units of measure in parentheses in the heading for each column. Do not change the unit of measure within a column. Do not use vertical rules. Do not use horizontal rules other than those in the heading and at the bottom. A column containing data readily calculated from data given in other columns can usually be omitted; if such a column provides essential data, the columns containing the other data can usually be omitted.

Plan your table for small size. A one-column table may be up to 42 characters wide. Count characters by counting the widest entry in each table column (whether in the body or the heading) and allow three characters for spaces between table columns. A two-column table may be 90 characters wide.

Equations and formulas. Use quadruple spacing around all equations and formulas that are to be set off from the text. Most should be set off. Start them at the left margin. Use the solidus for simple fractions, adding the necessary parentheses. But if braces and brackets are required, use built-up fractions. Identify handwritten symbols in the margin, and give the meaning of all symbols and variables in the text immediately after the equation.

Articles

Articles, both solicited and unsolicited, may range in length from 2000 to 5000 words (up to 20 manuscript pages). Write them clearly in reasonably nontechnical language. Provide a title of one or two lines of up to 26 characters per line and a subtitle consisting of a complete sentence in two lines with a character count between 95 and 105 for the sentence (spaces between words count as one character each). Do not break words at the ends of lines. Write a brief author note, giving your position and address. Do not include acknowledgments. Place title, subtitle, and author note on page 1. Begin the text on page 2.

Insert subheads at appropriate places in the text, averaging about one subhead for each 3 manuscript pages.

Keep them short—up to 35 characters and spaces. Do not use more than one degree or level of subheads.

Provide a summary at the end.

Do not submit more than one illustration (table or figure) for each 4 manuscript pages unless you have planned carefully for grouping. With such planning, many illustrations can be accommodated in one article. Consult the editorial office for help in planning.

Reports

Short reports of current research results may vary in length from 1 to 6 double-spaced manuscript pages of text. The shorter papers receive preferred treatment. Limit illustrative material (both tables and figures) to one item for each 3 manuscript pages. Three items is the maximum. A research report should have news value for the scientific community or be of unusual interest to the specialist or of broad interest because of its disciplinary nature. It should contain solid research results or reliable theoretical calculations. Speculation should be limited and is permissible only when accompanied by solid work.

Title. Begin the title with an important word (preferably a noun) that is likely to be useful to indexers. The title may be a conventional one (composed primarily of nouns and adjectives), a sentence (containing a verb), or a structure with a colon (Nictitating Membrane: Classical Conditioning and Extinction in the Albino Rabbit). Limit it to three lines of complete words of no more than 32 characters per line (spaces between words count as one character each). Do not use abbreviations. Type the title in the middle of page 1.

Abstract. Provide an abstract of 45 to 55 words on page 2. The abstract should amplify the title but should not repeat it or phrases in it. Qualifying words for terms used in the title may be used. Tell the results of the work, but not in terms such as "_____ was found," "is described," or "is presented."

Text. Begin the text on page 3. Put the news first. Do not refer to unpublished work or discuss your plans for further work. If your paper is a short report of work covered in a longer paper to be published in a specialty journal, you may refer to this paper if it has been accepted. Name

the journal. If the manuscript has not been accepted, refer to it as "in preparation." Omit references to private communications. Do not use subheads.

Signature. List the authors on the last page of the text and give a simple mailing address.

Received dates. Each report will be dated the day an acceptable version is received in the editorial office.

Letters

The Letters section provides a forum for discussion of matters of general interest to scientists. Letters are judged only on clarity of expression and interest. Keep them short and to the point; the preferred length is 250 words. The editors frequently shorten letters.

Technical Comments

Letters concerning technical papers in *Science* are published as Technical Comments at the end of the Reports section. They may add information or point out deficiencies. Reviews are obtained before acceptance.

Meeting Reports

Meeting reports should summarize two to four of the most important scientific results and give an interpretation of them in terms that can be understood by a wider audience than that represented by those who attended the symposium. Focus your report on events that will have interest, news value, and significance to an audience of varied background. A definitive report is not possible, and a catalog of who spoke on what subject is dull.

Book Reviews

The selection of books to be reviewed is made by the editors with the help of advisers in the various specialties; arrangements are then made with reviewers. A sheet of instructions accompanies each book when it is sent to the reviewer.

Cover Photographs

Particularly good photographs suitable for use on the cover are desired if they can be published in connection with any type of paper.
