

# Signal averaging... plus

- 10 usec. sweep speed
- 800 or 4000 addresses
- 4-input histograms
- Integration and differentiation
- Auto- and crosscorrelation

Physioscope is more than a fast 4-input signal averager. For amplitude, peak amplitude, time or time interval histogram computing, simply insert the appropriate program plug—no auxiliary modules needed. Also included as *standard features* are pushbutton integration, differentiation, normalizing, preset sweep counting and selective readout.

Interested in on-line correlation? Just add a single module. Modular design and built-in computation capabilities make the Physioscope the most economical *full capability* statistical data processor on the market. # The Sage Automatic Injector injects, dispenses, pumps.

The new Sage Automatic Injector, Model 197, is a combination heavy duty injector, dispenser, and pump. It injects volumes from 0.1 to 12.5 ml of fluid in approximately 0.5 seconds—repetitively and reproducibly. It will accept all standard syringes up to 20 cc in size, and may be operated directly or remotely.

This rugged instrument may be operated in 3 modes: to inject or refill; to inject and refill for next injection; or to operate continuously as a pulsatile metering pump with a flow rate range of from 6.0 to 750 ml/min. The automatic injector lends itself to many applications, including the injection of dyes and radioactive materials and the repetitive dispensing of small volumes.

Price \$360.00. Write for complete information.

Here's the first YAG laser to offer modular design. You can get the basic unit and add the "building blocks" you need from stock — now or in the future.

The versatile TRG Model 400Y Nd doped YAG laser system is adaptable to over 12 different configurations. It delivers over 20 watts of continuous infrared power at  $1.06 \mu$  for welding, resistor trimming, silicon dicing, other fabrication work. It can also be operated in single mode with a Barium Sodium Niobate second harmonic crystal for up-conversion to several hundred milliwatts of continuous green light at  $0.53 \mu$  for such applications as underwater television, holography, or aerial mapping.

Options include a Q-switch module to provide up to 2000 pulses per second at up to 7.0 kilowatts per pulse; three interchangeable laser rods (3, 5, and 6.5 mm); choice of open cavity, or closed cavity design for highest output; optics and temperature control module for up-conversion to green laser light, and a recollimating telescope.

# The first "building block" YAG

Other features: High reliability . . . e.g., 1,000 test hours without lamp, crystal, or power supply malfunction. Easy alignment . . . confocal Fabry-Perot cavity. Simplified maintenance . . . lamp and other components are readily accessible without disturbing alignment.

Call or write for detailed information to Control Data Corporation, Melville Space and Defense Systems Division, TRG Laser Products, 535 Broad Hollow Road, Melville, New York 11746. Or phone: (516) 531-6344.

CRYOMATIC

## HERE'S OUR OSMOMETER LINE, TODAY...

*What more can you expect from a leader?*

All of these outstanding osmometers are available from Advanced Instruments, the company which first introduced a freezing point osmometer back in 1955.

We set out to become the leaders in osmometry . . . and, if sales are any indication, we have succeeded. A few of the contributions we have made to

the science of osmometry are: The first schools of osmometry, the first modular osmometer, the first thermoelectric refrigerator, the first portable model, and the first Hot Line  service system.

Now, in addition to the improved 1969 version of our original model we also have: a new air-cooled refrigerator with the longest life guaran-

tee in the field, a Hi-Precision Research Osmometer, and a Nanoliter Osmometer for samples less than one microliter. We are adding others to our growing line.

To us LEADERSHIP means continuing programs of product improvement, outstanding service, and fast delivery. We think this is the way a leader should act. Don't you?

**Chemically inert • No mixing cavities • Quick connecting • Leakproof at 500 psi.** Chrominert™ valves and fittings will cut hours from the time you spend assembling tubing for chemical analysis. You can connect and disconnect everything with your hands, making finger-tight joints that won't leak at 500 psi. □ There are fittings for 1/16" and 1/8" tubing. They handle nearly any fluid because only chemically inert materials—Teflon, Kel-F and glass—touch the stream. All are designed with zero dead volume, so there will be no mixing. □ Other advanced Chromatronix apparatus includes precision pumps that produce unfluctuating flows at pressures up to 500 psi, and high-resolution columns for liquid chromatography. **Send for catalog.**

# A formula for success.

Our newly-available Charles River Rat and Mouse Formula. The same formula used for successful breeding and raising of all Charles River animals.

Now offered to help you control an important research variable. Now offered to allow your animals' diet to be the same, from birth through experimentation.

Our formula is vitamin prefortified for pasteurization. Specially-shaped for maximum steam penetration. Clump-free after steam processing. Uniformly consistent, calibrated and regulated. And each 50-pound package is rupture-resistant under high vacuum steam processing.

Available soon to researchers everywhere from Country Best-Agway, Inc., through your local feed distributor. Charles River Breeding Laboratories, Inc., Wilmington, Massachusetts 01887.

Food for thought.

## the \$1195\* Monochromator with "better than 1 Å resolution"

### how much better?

We do not intend to praise the resolution of the Heath/Malmstadt-Enke EU-700 Monochromator by numbers. The optical performance of the "700" is better illustrated by the degree of separation of a typical first order profile of a 3131 Hg line and by the sharp, coma-free line produced from a copper hollow-cathode lamp, enabling you to judge its resolving power against the criteria you generally use.

If you think your Monochromator is as good as the "700" try the above tests on your instrument, compare them with the "700"... and see if you don't need a new Monochromator. The optical system is of the Czerny-Turner type with a focal length of 350 mm. To prevent aberration of the images and minimize coma, the "700" has parabolic mirrors, coated with MgF<sub>2</sub> for maximum reflectance in the UV. Image deterioration is virtually nonexistent.

The plane diffraction grating features 1180 lines per mm and a blaze wavelength of 2500 Å. Continuously variable slits between 5 and 2000 microns have ground and polished knife edges with heights from 0.5 to 12 mm. Stray light is minimized by the use of high

quality optical components. Special two-stage light baffles prevent off-axis light from entering or being dispersed.

All "700" Monochromators will produce the 0.3 Å resolution shown above, despite the fact that Heath conservatively states only "better than 1 Å." This high performance, versatile and stable Monochromator also features:

- $\pm 1$  Å tracking accuracy
- Modular versatility integrates the "700" into a series of spectrophotometers available soon
- In-line entrance and exit beams
- Electronic Programmable Digital Scanning
- Wavelength: zero order to 10,000 Å
- High Mechanical Stability with portability...all for just \$1195.

For more information on the "700" send for the NEW HEATH Scientific Instrumentation Catalog. A Manual is also available for \$2.

**a new  
easy to use  
direct reading  
laboratory  
conductivity  
bridge**

The YSI Model 31 Conductivity Bridge is brand new and specifically designed for laboratory use. Measure conductivity and resistivity with convenience, speed, and accuracy at 60 cycles or 1 kc. Use it over the entire range of electrolytic conductance from demineralized water to strong acids.

A unique multiplier scale, overlapping the basic scale, permits fast, easy direct reading. A high intensity parallel bar electron ray tube provides easy, exact determination of null. Line cord and electrodes are located out of the way.

Specifically designed for the laboratory, the YSI Model 31 is the most easy to use conductivity bridge available. Three new laboratory designed precision conductivity cells also are available. Ask us for full details.
