20 JUNE 1969

We decided to eliminate some limitations of Metallurgical Microscopes.

Now there's the Wild M50

Unprecedented versatility for investigating surface structures in incident light.

The stability to assure vibration-free observation even in photomicrography.

Combine these M50 features with 1. The world's finest optics and mechanical precision. 2. A complete range of accessories for photomicrography, projection, and discussion. 3. Fingertip switching from darkfield to brightfield. 4. Polarizing feature. 5. Inverted construction for all size specimens.

You'll conclude that in Metallurgical Microscopes, there's the Wild M50.

Write or call for Booklet M50.
