The CTC JUNIOR has
a range of 0-100°C,
with a uniformity of
±0.25°C. For reliability
it's got solid state
circuitry and a brushless
motor. And it displaces
a mere 60 ml. of water.

Pull it Out!

Now you can pull out those low-level repetitive signals buried deep in enveloping high background noise and bridge that price-performance gap between expensive ferrite memory and less versatile capacitive memory instruments.

The biomation/datalab 101/102 digital signal averagers have made it possible using a solid-state MOS shift register memory. They are capable of sampling at intervals as fast as 2 μ sec to a maximum of 100 msec, while converting the analog signal to 7 bit binary accuracy.

Operation is simple and well controlled with versatile delay and triggering controls and a wide sweep range. Data can be recorded for later analysis via analog (oscilloscopes, XY plotters) or digital (paper tape punches, etc.) outputs.

Industrial, biological, and physical science investigators will find the biomation/datalab 101/102 (100 or 200 channel) extremely versatile averagers for only \$3850 and \$4350 respectively. Send for the complete technical commentary. Write Biomation Corp., 1076 East Meadow Circle, Palo Alto, California 94303. Or call (415) 321-9710. ULTIMATE

The new Vickers M41 Photoplan is the ultimate... the infinitely universal microscope/camera system. With an M41 in your laboratory you could use any of these techniques today:

Transmitted light—Bright field, fluorescence, phase fluorescence, phase contrast, polarized light, Nomarski, macro, double refracting interference.

Reflected light—Nomarski, bright field/dark field, fluorescence, polarized light, micro-hardness, shearing measurement, surface finish, macro.

The M41 has superior, critical photometric capabilities. 100% of the image forming light can be directed to the monitoring system. Integral options permit measurement of the whole field, or discrete portions of 1/10, 1/100 and 1/500 of the field of view. **We want you to have the whole, truly amazing story of this infinitely universal new system. Write for folder 31-2333, now.**

The new range of EMI photomultipliers with "SUPER" S-11 photocathodes will enhance your project performance. High quantum efficiency, (23/24%) high gain at relatively low overall voltage, and low dark current at the rated overall sensitivity are typical of these types. They maintain the EMI standard of excellent gain stability and linearity. The narrow spread in characteristics makes these types ideal for systems or for multiple installations. The table below gives the typical values for the significant parameters.

Dia.	Type No.	Amps/ Lumen	Volts/ Overall	Anode Dark Current Nanoamps
2"	9656R	50	1150	2
3"	9708R	50	1250	5
3.5"	9531R	200	1300	25
4"	9732R	50	1250	10
5"	9709R	50	1350	15

Note that the anode dark current is given for the overall voltage at the specified overall sensitivity. The maximum overall sensitivity is 10 times the values given above. Each Tube is individually calibrated and data is supplied with the tube.

Send for our new 64 page catalog giving data and technical information on the complete range of EMI photomultipliers.

Bausch & Lomb StereoZoom Microscopes rate Summa Cum Laude

Instructors of science classes using StereoZoom Microscopes for examination and dissection of living materials and preserved specimens, and general lab requirements rate these instruments at the top of the list. To be sure your students receive the most effective instruction, choose Bausch & Lomb StereoZoom Microscopes.

You will also be making the wisest use of your dollars. StereoZoom Microscopes are the easiest to use, least complicated, professional quality three dimensional microscopes you can buy. Their optical performance is outstanding. High resolution, true stereopsis, flatness of field are assured. Mechanically, they are built to withstand years of the sometimes careless treatment they get from students. There's a model exactly suited to your curriculum needs.

Find out about Bausch & Lomb StereoZoom Microscopes. Write today for our new catalog 31-15 and our free demonstration offer.

The YSI Model 31 Conductivity Bridge is brand new and specifically designed for laboratory use. Measure conductivity and resistivity with convenience, speed, and accuracy at 60 cycles or 1 kc. Use it over the entire range of electrolytic conductance from demineralized water to strong acids.

A unique multiplier scale, overlapping the basic scale, permits fast, easy direct reading. A high intensity parallel bar electron ray tube provides easy, exact determination of null. Line cord and electrodes are located out of the way.

Specifically designed for the laboratory, the YSI Model 31 is the most easy to use conductivity bridge available. Three new laboratory designed precision conductivity cells also are available. Ask us for full details.
