1 The start of physical breakdown as salmon enters fresh water.

2 A miserable shadow of the beautiful silvery deep-ocean salmon, now with a hump and hooked jaw, cartilaginous bones and peeling skin.

Kind permission of Oceans Magazine

The Ultrotome at Sea

LKB have taken part in another "first", this time at sea, aboard the "Alpha Helix".
The "Alpha Helix" investigations concerned the rapid aging of salmon, illustrated in the photos above, which occurs when the salmon enter fresh waters on their spawning run.
During the autumn of 1968 the first electron-micrograph made aboard a ship, was produced on this marine-research vessel belonging to the Scripps Institution of Oceanography. A standard LKB Ultrotome cut the sections.
Excellent results were achieved, even when the ship was under way, on the high seas. There could hardly be a more convincing demonstration of the versatility of the LKB Ultrotome.
Some of the answers found by the research team could have a direct application to man, and ultimately help to reduce the physical and mental deterioration associated with human aging.

Sales and service in USA: New York, Boston, Chicago, St. Louis, Atlanta and Houston; in Europe and throughout the world.

FOR MICROSCOPE PHOTOGRAPHY

Whatever your preferences or particular requirements in photomicrographic equipment they can, in all probability, be satisfactorily met from the broad line of Bausch & Lomb specialized apparatus. Through continuous testing, refining and development, the various models present the features that modern users need.

The newest is an adapter/camera assembly for our Dynazoom® and StereoZoom® microscopes and bench metallograph that permits use of a 35mm or 4″ x 5″ film; or a *Polaroid 3¼″ x 4¼″ Land camera back or a *Polaroid 4″ x 5″ Land film holder. This flexibility provides for quickly shifting from one camera to another to meet the varying photomicrographic needs in the laboratory.

In addition, Bausch & Lomb supplies full lines of Micro Tessar lenses, condensers, specialized illuminators, filters and other specialized equipment.

Write for our catalog 42-21, and our free demonstration offer today. Bausch & Lomb, Scientific Instrument Division,20828Bausch Street, Rochester, New York 14602.

SCIENCE

SCIENCE is published weekly on Friday and on the fourth Tuesday in September by the American Association for the Advancement of Science, 1515 Massachusetts Ave., NW, Washington, D.C. 20005. Now combined with **The Scientific Monthly®**. Second-class postage paid at Washington, D.C. Annual subscription $12; foreign postage: Americas $3; overseas $5; single copies, 50¢ (back issues, $1) except **Guide to Scientific Instruments** and the 30 January issue, which are $3 each. School year subscription: 9 months, $9; 10 months, $10. Provide 4 weeks notice for change of address, giving new and old address and zip codes. Send a recent address label. SCIENCE is indexed in the **Reader's Guide to Periodical Literature**.

COVER

Tumulus at New Grange, Ireland, with its ring of free-standing megaliths. See page 321. [Tracing from G. Daniel in *Megalithic Builders of Western Europe*; courtesy of Thaddeus M. Cowan, Oklahoma State University]

How to put today's instrumentation to work for you.

New electronic probe can magnify, then analyze tiny specks with X-rays.

The Philips 4500 Electron Probe Microanalyzer offers the analytical chemist simultaneous optimization for operation as an electron probe microanalyzer and a scanning electron microscope.

The new microprobe system contains computer-adaptable spectrometry scanning, specimen stage drives and sample current metering. Up to four two-crystal x-ray spectrometers, combined with a dual lens electron optical system, permit qualitative and quantitative analysis of submicron to three inch samples from Boron up in the atomic table.

Typical applications are illustrated by the micrographs on the right. I is a scanning electron micrograph (back scatter electrons) of a typical integrated circuit. Instrument capability includes study of sample structure and morphology combined with the ability to analyze contamination spots which might cause circuit malfunction.

II is a scanning electron micrograph (back scatter electrons) of a cut edge of cloth. Applications in textile industries include not only study of fiber morphology but also studies involving analysis of contaminating layers, coatings, etc. Multiple spectrometers permit simultaneous analysis for up to 4 elements. High take-off angle permits examination of relatively rough surfaces.

III. Back scattered electron images of copper-gold sandwiches demonstrate special resolution and minimum electron spot size in the electron probe mode of operation. The smallest copper layer visible is .21 micrometers. Optimization of the instrument for scanning electron microscope resolution to 500 A generally requires only the selection of limiting apertures and adjustment of lens current.

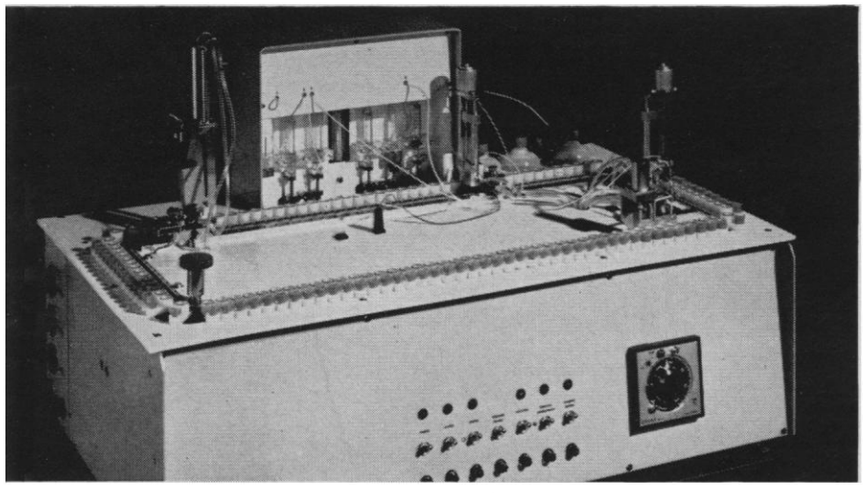
Analyze 120 samples an hour.

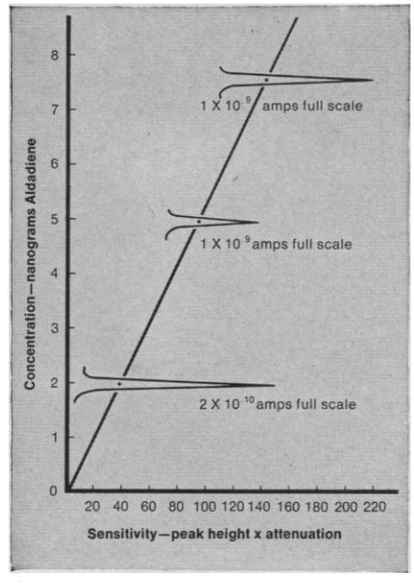


The new Unicam AC 60 Automatic Chemistry Systems are an outstanding choice for the busy routine laboratory and are the lowest cost systems available.

They are fully automated; so simple to operate that unskilled staff can be trained rapidly because both programming and interchanging of analysis scheme is simple and foolproof.

Typical methods include: Protein, Glucose, Urea, Inorganic Phosphorus, Hemoglobin, Magnesium, SGOT, SGPT, Cholesterol, Ammonia Nitrogen, LDH; ideal for automatic enzyme analysis. Circle #2.

Automated analysis of Aldadiene steroid using high temperature EC Ni 63 detector and auto solid sample injection.



The Pye Series 104/106 Gas Chromatograph offers you the following:

- modular design
- multiple detectors
  high sensitivity
  high specificity
  high temperature EC Ni 63 capability
- high column performance
- automatic solid sample injection
- computer compatible

Circle #4.

New computer-controlled X-ray spectrometer offers greater accuracy and speed.

The new PW1220C Sequential X-Ray Spectrometer permits computer analysis from one reference standard sample, in one example, of more than 200 different steel alloys, measuring 24 different elements ranging from trace quantities up to major concentrations. The computer calculates the concentrations using just one reference standard sample for all alloy types.

The PW 1220C can be supplied complete with required hardware and software necessary to meet the needs for specific applications in industries such as cement, glass, steel, and for processes involving sintering and production of lubricating oils. Extremely complicated analysis associated with inter-element effects, involving complex equations, can be solved without the danger of human error or increase in manpower.

Programs are available for 4K and 8K systems. The program best suited for you depends on your analytical problem.

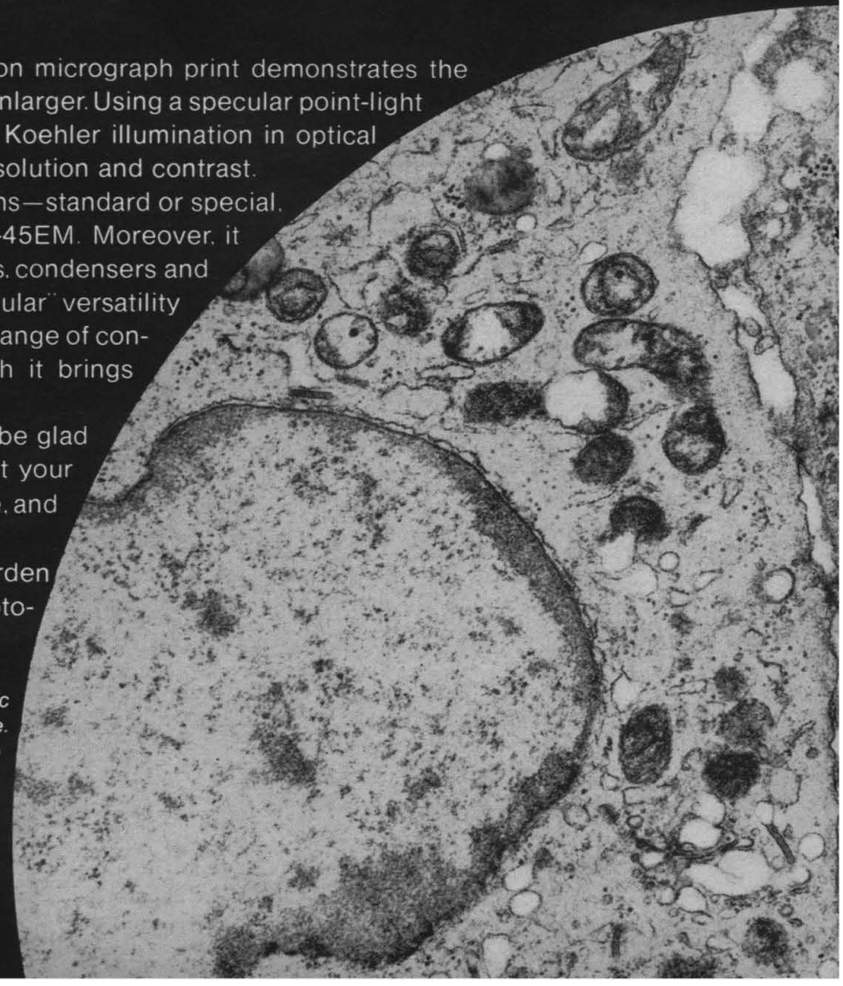
At 16,000 magnification, Durst quality proves more than skin deep

The crisp clarity and definition of this electron micrograph print demonstrates the uncommon capabilities of the Durst S-45EM enlarger. Using a specular point-light source and condenser system, analogous to Koehler illumination in optical microscopy, it provides exceptionally high resolution and contrast.

All types and sizes of electron micrographs—standard or special, plates or film — may be enlarged with the S-45EM. Moreover, it offers ready interchangeability of light sources, condensers and lenses as well as negative carriers. This "modular" versatility makes it easy to adapt the S-45EM for a wide range of conventional photographic applications to which it brings unvaryingly reliable, efficient performance.

A specially qualified dealer near you will be glad to demonstrate the Durst S-45EM enlarger at your convenience, without obligation. For his name, and complete technical information, write:

EPI Photo-Technical Products Division, Garden City, N.Y. 11530. Subsidiary of Ehrenreich Photo-Optical Industries, Inc.



Section of human epidermis taken from a site of allergic eczematous contact dermatitis due to mercuric chloride. Parts of a Langerhans cell and of a keratinocyte are shown. Photographed at 6,000x in a Siemens Elmiskop 1 A electron microscope; enlarged to 16,000x with a Durst S-45EM.

(Courtesy of Dr. Inga Silberberg, New York University School of Medicine, Department of Dermatology).

Your clinical laboratory apparatus should be the very best.

More and more clinical laboratories are insisting on Thermolyne apparatus . . . and for some very good reasons. Thermolyne has gained a reputation for quality products. The designers at Thermolyne are knowledgeable of how the apparatus will be used and keenly aware of the mandatory requirement for accuracy. Their concern is reflected in such important design features as solid state electronic controls, spill-resistant materials, embedded heating elements, compact packaging and built-in durability. Thermolyne offers a complete line of quality laboratory apparatus to help you in your exacting work . . . durable test tube mixers, modular Histo-Centers for tissue specimen preparation, Dri-bath incubators with precise temperature controls, new circulating Water-bath with exclusive filter system, Culture Incubators that are attractive and versatile, superior Hot Plates, Stirrers, Rh View Box and fully automatic Lab Furnaces.

Insist on Thermolyne . . . to be sure.

Write for free catalog.

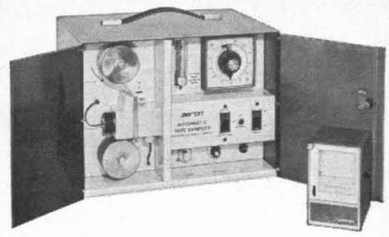
New Precision aeron Air Quality Instruments

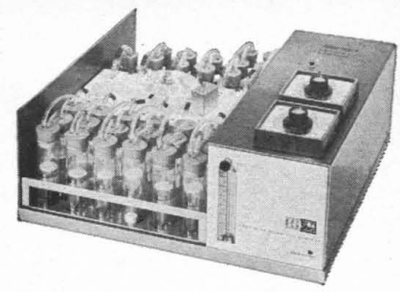
Yes, a complete new line of instruments and accessories for air pollution monitoring. Designed to meet your metering, testing, sampling requirements. Built to Precision's high standards of quality—recognized leader in laboratory equipment for half a century. Available now from leading laboratory supply houses in all principal cities. Ask him for performance data or write us for Bulletin 680. Precision Scientific Co., 3737 W. Cortland Street, Chicago, Illinois 60647.



AUTOMATIC TAPE SAMPLER/RECORDER

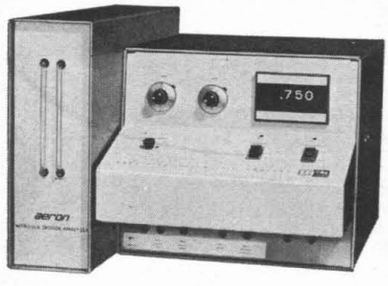
- Complies with ASTM D1704.
- 1-inch diameter sample spots on 2-inch centers.
- Automatically records 0-100% light transmission.
- Constant-voltage light source for consistent readings.
- Oil-less diaphragm pump.
- Easy conversion to Coh units.
- Flow rate adjustable from 2 to 20 C.F.H.
- Integral push-to-read flowmeter.
- Sample time variable from 0 to 240 minutes.

Also available—AUTOMATIC TAPE SAMPLER. Identical to the Automatic Tape Sampler/Recorder except for the omission of the strip-chart recorder, the photo-voltaic cell and the controlled light source.



SEQUENTIAL SAMPLER

- Complies with ASTM D1605, D1607, D1609.
- Inexpensive sampling containers.
- Samples gaseous or particulate matter.
- Operates unattended—for up to 4 days.
- Sulphur-free stoppers eliminate ground glass joints.
- Interchangeable impinger tubes or diffuser tubes at minimum cost.
- 12 stations—each accommodating up to 3 tubes.
- Sampling time from 2 to 240 minutes.
- Interval time from 2 to 240 minutes.
- Removable, preloadable racks for rapid change-out.
- See-through acrylic cover, bronze-tinted to protect light-sensitive solutions.



CONTINUOUS NO_2 MONITOR

- Correlates with ASTM D2012.
- Gives continuous measure of NO_2 (or NO) in the atmosphere.
- Sensitivity 0.02 ppm or better.
- No contact of reagents or sample with pump.
- All solid state and integrated circuit components.
- Reproducibility: ±1% of full scale.
- Digital panel meter with BCD output.
- Recorder outlet.
- Sufficient reagent capacity for unattended weekend operation (72 hours).
- Adjustable to 2 ppm full scale.
- All parts easily accessible; minimum maintenance.

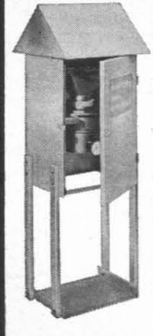
TAPE SPOT EVALUATOR

- Evaluates spots at a rate of 720 spots per hour.
- Indicates percent light transmittance directly.
- Constant-voltage source for light.
- Companion unit for Automatic Tape Sampler.
- Tilt-up meter for easy reading.

SULPHUR DIOXIDE AND DUST-FALL MONITORING STATIONS

- Complies with ASTM D2010 (for SO_2) and ASTM D1739 (for dust fall).
- Compact, attractive and stable stand.
- Assembles without tools.
- Available as Sulphur Dioxide and/or Dust-Fall Station.
- SO_2 Shelter and Dust-Fall Support of vinyl-coated aluminum.

HIGH-VOLUME AIR SAMPLER



- Complies with ASTM D2009.
- Complies with USPHS Specifications.
- Gage indicates flow in c.f.m.
- High capacity blower—up to 80 c.f.m. free air.
- Designed for continuous usage.
- Stainless-steel filter holder with dual mesh stainless-steel filter support.
- Choice of outdoor shelter or indoor floor stand.

Concepts from Union Carbide:

Cryogenic freezing of red blood cells

Probably no single problem has received more attention from cryobiologists than the preservation of the human red cell. And with good reason. Procedures that extend the supply of erythrocytes for transfusion have meaning in terms of human lives.

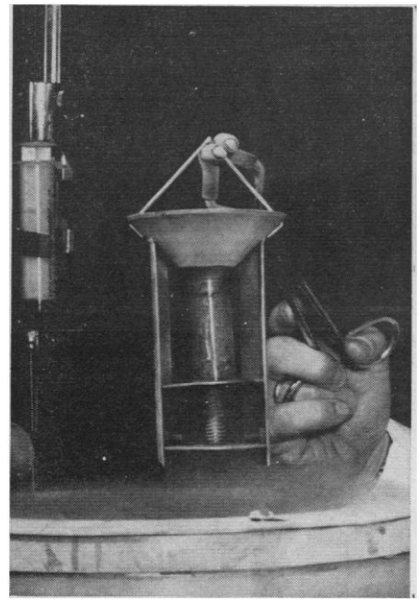
The prospect of a frozen blood reserve has been a matter of intensive interest to the blood banking agencies for the past twenty years; some have played a major role in the scientific attack on the problem. It has not been easy. It was observed in 1941 that red cells (suitably protected with additive substances) could survive the drastic environmental changes induced by freezing. Since then, processes have been sought for the preservation of blood in the frozen state that would provide a useful and acceptable product for transfusion. As evidenced over the past decade by the successful transfusion of thousands of units of blood preserved in the frozen state, that goal seems to have been reached.

The current limitation of twenty-one to twenty-elght days for blood preserved by conventional methods in the liquid state has often taxed the resources of the organizations that undertake to provide our communities with supplies of this indispensable agent. The relatively short shelf life of the cellular components of blood adds to the problem of coordinating supply with demand. The less common blood types sometimes are difficult to procure, but even the more common types may vary in supply at any given time.

Red cell wastage is an inevitable consequence of the dating period necessarily imposed on blood stored at 4°C. A primary objective of agencies interested in preserving blood at low temperatures is to prevent this wastage. Another, of course, is to assure adequate reserves of all types of blood at all times for each community. Conceivably then, as frozen blood banks become established in various parts of the country, an integrated and computerized inventory system could be developed that would result in an effective national reserve.

Several practical approaches to the preservation of blood at low temperatures have evolved. All have some elements in common. A solution of additives, often called cryoprotective agents—glycerol is the outstanding example—is combined with the red cells from which most of the plasma and much of the other cellular components of blood (leukocytes and thrombocytes) have been removed. This is done in special containers in which the erythrocytes are cooled and placed in long-term storage. When needed, the erythrocytes are withdrawn from storage, warmed, and subjected to a washing procedure to remove the protective agent before transfusion.

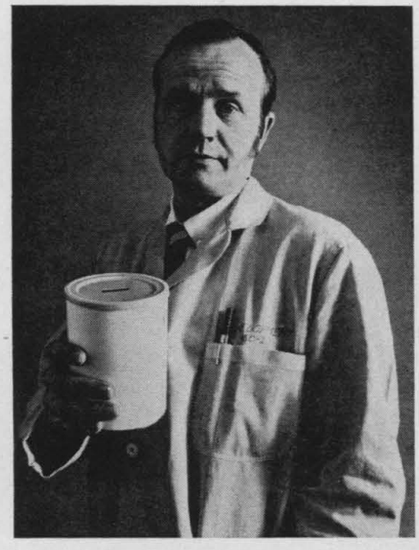
The heart of a frozen blood reserve is the storage facility. Storage equipment is of two general types: cryogenic and noncryogenic. The latter provides temperatures down to about −85°C and depends on electric power. The cryogenic equipment is independent of a power source and provides lower storage temperatures—down to −196°C—with liquid nitrogen, the most commonly used refrigerant. Associated with such storage equipment are cryogenic shipping units that permit transport of blood in the frozen state without danger of a destructive rise in temperature that might render the blood cells unfit for transfusion.



Small quantities of blood are instantly frozen for long-term storage in the droplet freezer. A mechanically vibrated syringe releases droplets into a revolving drum of liquid nitrogen. The frozen droplets are collected in the base. Thousands of droplets can be collected from each sample for use as reference specimens.

The banking of frozen blood with longer shelf life should considerably enhance the ability of the blood supply agencies to meet demand and might influence current procurement practices. The use of cryogenic storage equipment would provide a margin of safety for autologous blood banking in which individuals of rare blood type would establish a reserve of their own blood in anticipation of later need. Probably most important in terms of medical need, the availability of banks of frozen red cells would seem likely to lead to the development of banks of the other cellular components of blood. With current liquid state storage procedures, platelets and leukocytes—far less stable than the red cell—are without transfusion value within about three days or less after donation. At present, the only prospect for establishing a large-scale reserve of these invaluable components is to preserve them in the frozen state. Although low temperature preservation procedures for these cells are not technically as far advanced as for the red cell, several blood laboratories are fully aware of the need and are attacking the problem vigorously.

The new Cary 61. The CD spectropolarimeter that lets you save the money you probably don't have.



We've come up with a way to let you make the most of a tight budget without compromising quality. The new Cary 61 is an all solid-state, high performance CD-only instrument that costs less than $30,000 and can handle any research or routine CD spectropolarimeter problem.

THE BASIC 61

Practical design considerations make the new Cary 61 one of the easiest-to-operate instruments of its kind. Simplified controls allow rapid adaption of operating parameters to sample needs and permit savings in instrument set-up time. Built-in features include: dynode voltage recording for deriving the sample's absorption properties; provision for interfacing computer readout and control; and a specially designed, very spacious sample compartment which accommodates a super-conducting magnet for MCD studies, or other sample handling equipment.

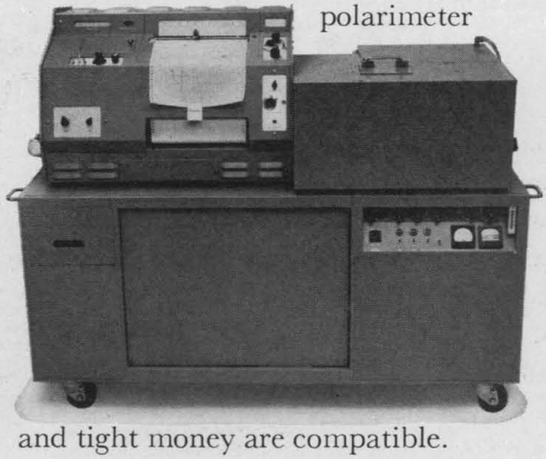
The performance-proven double monochromator and special optical design features of the Cary 61: minimize stray light, reduce the occurrence of artifacts, allow penetration into the ultraviolet with complete confidence, and sharply define small spectral details over its entire 185-800 nm range.

As for CD performance, if the 61 can't do it, nothing else can.

MORE CD FOR LESS

Simply add our unique "folded beam" optical accessory and you're set to perform CD difference measurements with extremely high sensitivity. All the while keeping additional expenses to a minimum.

The new Cary 61. Working proof that a good, versatile CD spectropolarimeter



and tight money are compatible.

For complete details or a demonstration, write Cary Instruments, a Varian subsidiary, 2724 South Peck Road, Monrovia, California 91016.

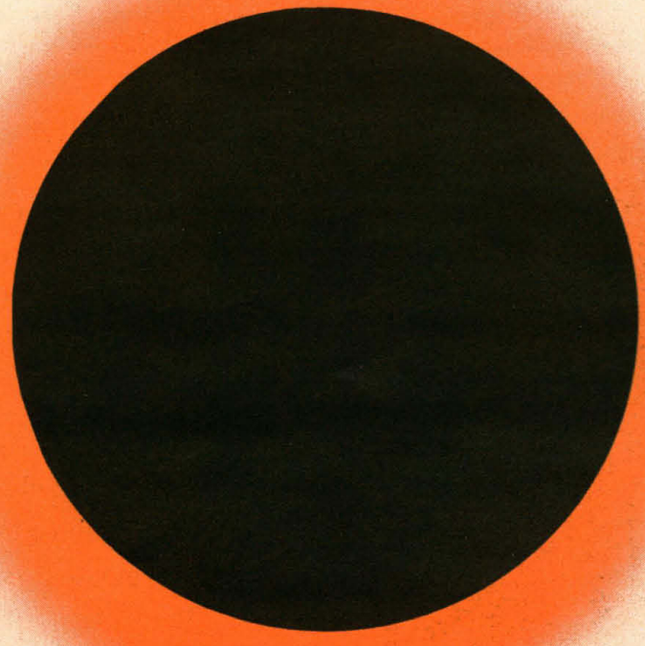
Announcing the

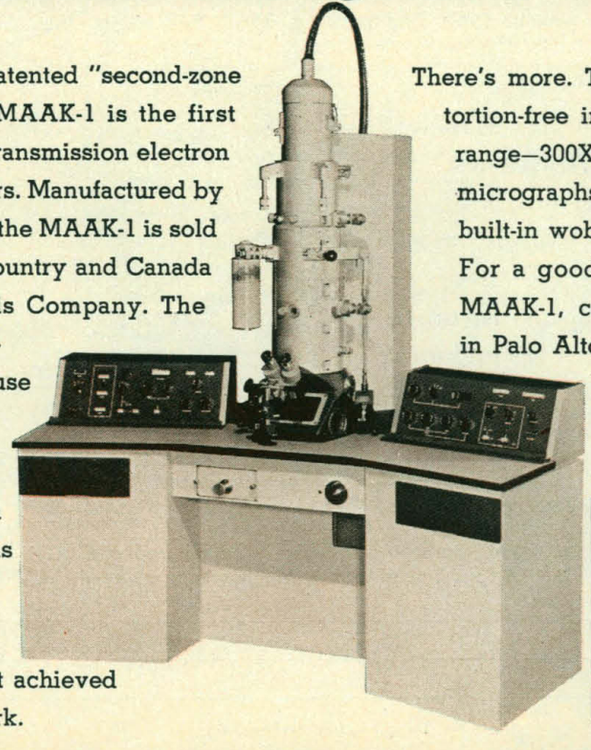


2nd eclipse of the year!

(The MAAK-1 high resolution TEM.)

Featuring a unique, patented "second-zone objective lens," the MAAK-1 is the first new development in transmission electron microscopes in 10 years. Manufactured by Akashi, Ltd., of Japan, the MAAK-1 is sold and serviced in this country and Canada by Materials Analysis Company. The MAAK-1 eclipses conventional TEM's because its second-zone lens provides:

- **twice** the resolution of other lens designs (given the same specimen).
- **highest contrast** yet achieved for thin section work.



There's more. The MAAK-1 gives you bright, distortion-free images over its **entire** magnification range—300X to 500,000X. Further, you'll get sharp micrographs every time because the MAAK-1's built-in wobbler assures proper focusing.

For a good look (without pinholes) at the MAAK-1, contact MAC. Demonstrations given in Palo Alto.

Materials Analysis Company,
1060 E. Meadow Circle,
Palo Alto, CA 94303.

Suggested Reading for the

Environmental Teach-In

Estuaries

The development of coastal areas has been very rapid in recent years, but knowledge of estuarine environments has not kept pace with the necessity to resolve problems arising from their intensive use. This is the first comprehensive collection of scientific papers covering the comparatively new field of estuarine research.

This volume contains 71 articles on physical and biological factors, geomorphology, sediments and sedimentation, microbiota, ecology, evolution, fisheries, human influences and pollution.

Edited by George H. Lauff. 1967. 2nd printing, 1968. 776 pages. Illustrated. Bibliography. Indexes.

Agriculture and the Quality of Our Environment

This symposium is basically concerned with the problem of how environmental quality affects agriculture, and how agriculture affects the quality of the environment. It identifies the part which science must play in solving environmental pollution problems.

Edited by N. C. Brady. 1967. 476 pages. Bibliography. Author and subject indexes.

Air Conservation

This is a report of deliberations of the Air Conservation Commission of the AAAS over a 2-year period. It pulls together into a single reference a wealth of information presented by authorities in the fields of conservation, pollution control, pollutants and their effects, law, economics, meteorology, public health, public opinion and government.

The *Bulletin* of the American Meteorological Society calls this work "the most thoughtful, realistic and penetrating analysis of air pollution as a factor in the societies of today and tomorrow now available. It is a *must* for the serious student and professional, and can be highly recommended to the interested citizen."

Report of the AAAS Air Conservation Commission; James P. Dixon, Chairman. 1965. 2nd printing, 1968. 348 pages. Illustrated. Bibliography. Index.

Oceanography

A collection of 30 papers presented at the first International Oceanographic Congress by world-renowned authorities. An interdisciplinary reference that deals with some of mankind's most profound questions . . . the origin and history of living things, for example, and the history of our galaxy as recorded in marine sediments.

Edited by Mary Sears. 1961. 5th printing, 1969. 665 pages. 146 illustrations. Bibliography. Subject index. Author index.

You may not like what you see. But you can't deny it's happening.

Brush recorders give facts-not opinions. In crisp, clear, continuous traces . . . plotted side-by-side against a common time base.

These traces could be most anything: temperature, pressure, vibration, speed, etc. Any mechanical, electrical, or hydraulic phenomena that can be converted to an electrical signal can be monitored and measured on a direct writing recorder. Which means you can keep tabs on all sorts of things. Machine tools. Test beds. Process and production lines. Electric motors. Anything.

The record will be precise, permanent, reproducible. You can study it, refer to it, show it to the boss. And start basing decisions on a data-generated written record instead of transient readings from meters and scopes.

Like we said, you may not like what you see. But you can be sure that what you see, is.

Find out how our direct writing recorders can do your fact-finding for you. Write: Brush Instruments Division, Gould Inc., 3631 Perkins Ave., Cleveland, Ohio 44114.

SEE LIFE AS IT IS...

...with the OLYMPUS CK

A Basic Tool for Tissue Culture Research

The CK is simply and specifically designed—and priced—to be the live-culture investigator's basic tool. It embodies compactly all of his basic needs, without rarely-used or superfluous features.

A basic tool must perform all of its appointed tasks easily and precisely. The CK's precision starts with its Olympus Achromat 4X, 10X and C20X objectives corrected for viewing through petri dishes or culture bottles.

LWD 40X (long-working distance) corrected for viewing through petri dishes or culture bottles is also available.

These objectives are noted for their high image contrast, field flatness, and superb correction—selected here with an eye to the depth-of-field requirements of live-culture investigation. Focusing is accurate and backlash-free, with tension instantly adjustable.

Accessories adapt the CK for phase contrast or polarizing microscopy. For photography, the binocular body may be replaced with a straight monocular tube, accepting any Olympus 35mm, Polaroid or sheet-film eyepiece attachment camera.

A transformer in the CK's base powers its low-voltage, high-intensity light source. The lamphouse incorporates a built-in condenser with iris diaphram and filter holders. The light support may be moved to accommodate any type of culture vessel.

Like any basic tool, the Olympus CK is designed for comfortable, fatigue-free use over long periods. Its large, unobstructed stage and all controls are low down in the "Ready Region" for operating ease; its high-eyepoint, wide-field oculars are inclined and are raised well above the desk for maximum comfort.

The CK is just one model in the complete Olympus scientific and industrial microscope line. Information on the CK—or on other microscopes for your particular application—is yours for the asking.

Beckman adds a human dimension to spectrophotometry...ACTA™

ACTA... human engineered with your needs in mind...

These new spectrophotometers provide rapid training, easy operation, simplified data retrieval, and modern design. Each is engineered for *reliability*, *accuracy*, and *precision*.

The ACTA line presently consists of three models operating over the 190 to 800 nm range. All feature new concepts in electronics, optics, and mechanical design. They offer digital readout, recording capability, single or double monochromators, and linear wavelength or wavenumber calibration. ACTA is complemented by a complete line of more than thirty accessories to match virtually any sample handling situation.

The ACTA line is backed by the thirty years of UV spectrophotometry experience at Beckman, by the large and experienced sales and service organization, and by applications assistance from the many Beckman Technical Support Centers. With ACTA you also receive a new publication, "An Introduction to Ultraviolet Spectroscopy," a short, practical, easy-to-read text to assist you.

ACTA is designed for you. It is designed as a complete system to match your needs and your priorities in spectrophotometry.

For complete information, call your Beckman Sales Representative or write for Data File 111, Scientific Instruments Division, Beckman Instruments, Inc., 2500 Harbor Boulevard, Fullerton, California 92634.

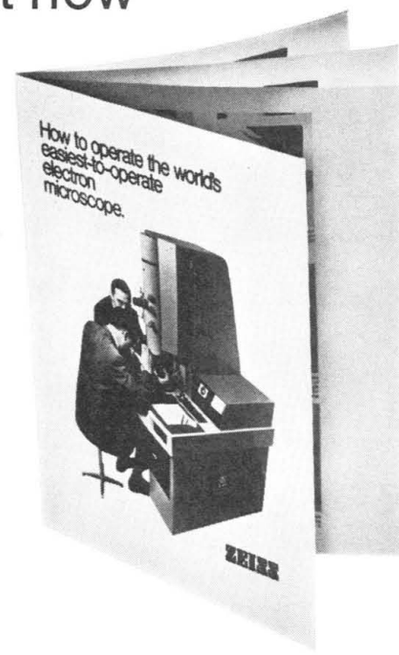
The world's easiest-to-use electron microscope is the new Zeiss EM-9S.

This free booklet shows just how easy it is.



The new ZEISS EM-9S is the electron microscope for researchers and teachers interested in electron microscopic studies, not electron microscopes. It is the easiest-to-operate, most foolproof instrument on the market. To show you, or your students, just how easy it is, we've put together a little booklet that illustrates every step of the operation. It shows such features as:

(1) The *fully* automatic camera system—just moving one lever closes the shutter, moves the screen out of the beam path, reads the electron density *directly* (a spot reading, not an integration), opens the shutter for the correct length of time, closes the shutter, superimposes the exposure number photographically on the film, and changes the negative. A red warning light shines directly into the binocular to indicate when the film magazine is empty.

(2) The foolproof airlock—it lets you change specimens in less than 10 seconds, with one hand, sitting down, and in darkness.

(3) The standard-equipment, multiple (21 holes) thin-metal film aperture—specially made for all EM-9 models, it assures care-free use over prolonged periods of time.

When you've been sitting in the dark for hours, fighting specimens whose preparation has followed Murphy's Law, you'll appreciate these and the other features of the EM-9S that enable you to concentrate entirely on the screen, not on the machinery.

Combine all this with 7Å point-to-point resolution, a magnification range from 0 to 60,000x, small size and low price, and you have an instrument that is really in a class by itself.

Fill in the coupon and we'll rush you the free booklet and any other data you may wish on the EM-9S.

Nationwide Service.

Time interval measurements like you've never seen before.

Plug the HP 5379A Time Interval Unit into the HP 5360A Computing Counter and things happen faster than they could ever happen before.

This unique combination resolves time intervals to 100 picoseconds. With absolute accuracy of 1 nanosecond. And you can measure zero, positive and negative intervals, which makes it ideal for checking coincidence.

By adding the HP 5375A Keyboard, you can enter programs to produce instantaneous answers about phenomena that you could never previously measure with a counter. Things like peak-to-peak jitter; rms jitter; phase measurements; duty cycle; and radar ranging in feet, inches, meters or any other units you want.

Thanks to the 5379A, dozens of jobs can be handled easily and accurately. These include calibration of radar, lasers, and laboratory instruments; testing semiconductors and computers; cable fault location; delay line adjustment; ballistic and nuclear measurements.

It does all this while saving you the cost of a computer, because the computer's built in. And you're not buying a counter that only measures time interval. You're getting the most advanced frequency measuring system available today, ideal for measuring pulses, pulse trains or any time-based events.

The cost is $750 for the plug-in and $6500 for the mainframe. Your local HP field engineer will be glad to arrange a demonstration. Give him a call. Or write for complete information to Hewlett-Packard, Palo Alto, California 94304; Europe: 1217 Meyrin-Geneva, Switzerland.

A different kind of weapon

Once known only as a golden fruit, the pineapple has also given its name to the deadly "pineapple." Now this fruit whose name was used for the grenade of war is rapidly becoming a versatile source of articles of peace.

One of these promising products of the pineapple plant is a protein-splitting enzyme called bromelain. It has already proved its worth as a meat tenderizer . . . as an anti-gellant that keeps gelatine drinks free-flowing . . . as an ingredient in a variety of pharmaceutical products . . . in chill-proofing beer.

How will this plant protease continue to meet its high promise in the field of new products? As a digestive aid? As a miracle cleanser? As a cure for the common cold?

How can your company use bromelain? Dole will supply technical supporting data and research samples if you think there may be an application in your business. Just write. We'll send you all the facts. Or, if you are ready to try your idea on a larger scale, bromelain is also available in commercial quantities.

You may find the kind of explosion you're looking for by releasing the potential in bromelain.

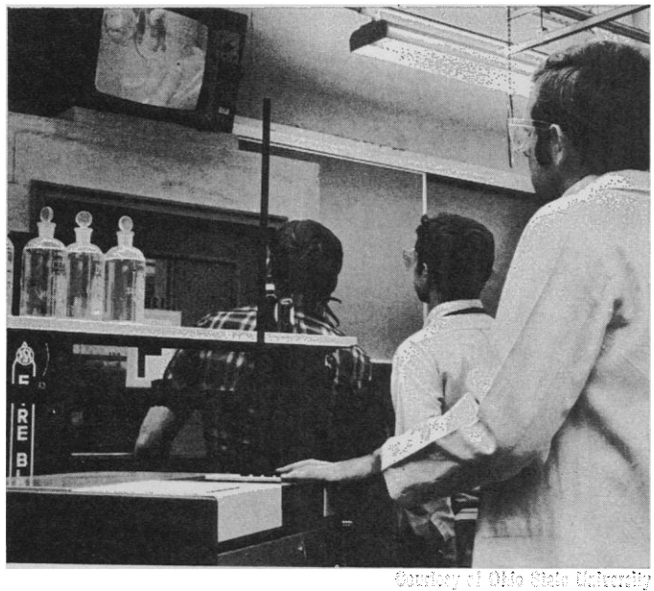
The next step in teaching undergraduate chemistry
ELECTRONIC VIDEO RECORDING



Courtesy of Ohio State University

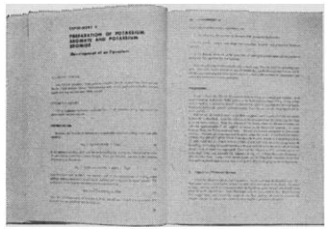
EVR is a completely new audiovisual system for instructional utilization of any TV set—in laboratory, classroom, lecture hall, or dormitory—with projection capabilities on one or multiple receivers. EVR eliminates the need to set up a projector, darken the room, have a special screen, or crowd students into limited viewing areas.

This device, developed by CBS Laboratories, employs a seven-inch cartridge which stores up to 50 minutes of specially processed film. The user has only to place the EVR cartridge on a spindle. The EVR player automatically threads, plays, and rewinds the film. The film can be stopped at any point and any single frame examined and discussed in depth. This stop/advance capability permits a practical mix—the equivalent of motion pictures, single slides and film strip sequences as needed. The EVR player links to the TV set by a single wire attached externally to the receiver's antenna terminals.

W. B. Saunders Company, a division of CBS, is pleased to introduce the next step in teaching undergraduate chemistry—a laboratory manual coordinated with EVR.

Ready April!
The first EVR-linked instructional aid in general chemistry

Lippincott, Meek & Verhoek:
EXPERIMENTAL GENERAL CHEMISTRY



Here is a superbly organized and executed general chemistry laboratory manual *for science majors and engineers* enrolled in a three-quarter course. Thirty-six experiments illuminate the procedures used to obtain experimental evidence and show precisely how to use the data collected to draw conclusions about the properties of matter. *The manual is coordinated with Lippincott & Barnard: General Chemistry Laboratory Films (available in both EVR and Super 8).*

For each experiment the authors provide meaningful background information—specific directions on what to do and how to do it—and, kind of data to be recorded. In the latter experiments, more burden is placed on the student to design the data vehicle.

The manual offers a quantitative emphasis with greater-than-usual stress placed on graphic methods of recording data trends. Experiments range through use of the balance—calibration of a thermometer—determination of a compound's formula—estimation of molecular size—acid-base equilibria—analysis of a mixture of salts.

By W. T. LIPPINCOTT, DEVON W. MEEK, and FRANK H. VERHOEK, *all of Ohio State University. About 350 pages, illustrated. Ready April, 1970. Teachers' Manual Available.*

Lippincott & Barnard:
GENERAL CHEMISTRY LABORATORY FILMS

EVR

SUPER 8

This series of films complements Lippincott, Meek & Verhoek: *Experimental General Chemistry* by helping an instructor provide exceptionally effective pre-laboratory instruction—and by helping the student visualize precisely the procedures or techniques so often difficult to express in words. Students can work along simultaneously with the films, utilizing the ability of the EVR player to stop at single frames for correlation of study and experimental technique.

Each film is divided into segments of from one to five minutes, covering such topics as a general introduction—statement of the experimental problem—outline of approach—development of procedure—methods for treating data—summary. *Films available:* Measurement, Use of Analytical Balance; Thermal Analysis of a Chemical System; Determination of the Formula of a Compound; Spectral Analysis; Determination of Sulfate; Estimation of Molecular Size; Solubility of Salts; Vapor Pressure; Acid-Base Equilibria I; Acid-Base Equilibria II; Spectrophotometric Study of Complex Ions.

By W. T. LIPPINCOTT *and* W. ROBERT BARNARD, *Ohio State University. 10 films. 10–15 minutes each. Available both processed for Electronic Video Recording (in black and white) and Super 8 w/sound (in color). About $60.00 per film on EVR. Price slightly higher on Super 8. Ready April, 1970.*

Complimentary copies of Experimental General Chemistry are available for consideration as class adoptions. Preview copies of General Chemistry Laboratory Films are available on 30-day approval. Please address requests to Educational Department,

We can put that in writing, right on our TLC plates.

Most pre-coated thin-layer chromatography plates are so loose and powdery that just the slightest touch will remove their coating. That's most definitely not the case with E. Merck (Darmstadt) pre-coated plates for TLC.

Their coating is completely smooth, homogenous, and truly abrasion-resistant. They never flake or scratch. You can even write on them (as we have done above) without disturbing the coating. That's why they can be packed and shipped directly on top of each other in compact, convenient polystyrene containers. And if any TLC plate reaches you in less-than-perfect condition, we'll replace it, unconditionally.

The unique organic binder in E. Merck (Darmstadt) Analytical and Preparative plates permits the use of all conventional spray reagents, strong polar solvents, stains and charring techniques. They are available with aluminum oxide, cellulose powder and silica coatings, with or without fluorescent indicators, in sizes ranging from 5x10 cm. to 20x20 cm. Prices are the lowest of any pre-coated system currently offered. May we send you a free sample and more information?

Just write: TLC Division, Brinkmann Instruments, Cantiague Road, Westbury, New York 11590.

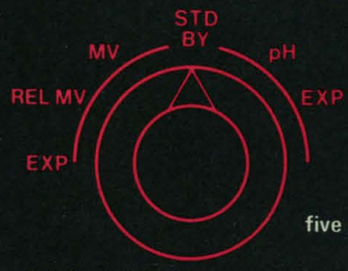
Why is this $650 Orion pH meter better than any other selling for under $800?

It does more.

the model 701 digital pH meter

more versatility

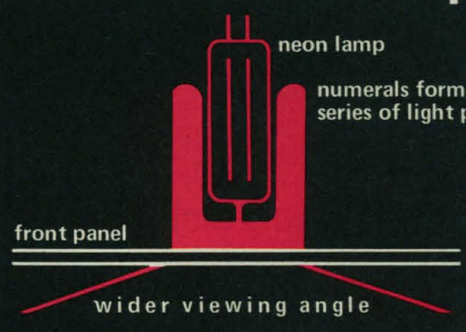
the 701 is designed to be used with both pH and specific ion electrodes — a feature that's a must on any new pH meter.



five operating modes

pH 0.00 to 13.99 — plus expanded pH readings to 0.001 pH.
relative and absolute millivolts: +1999 to −1999 mv.
expanded millivolts: +199.9 to −199.9 mv.

more readable display

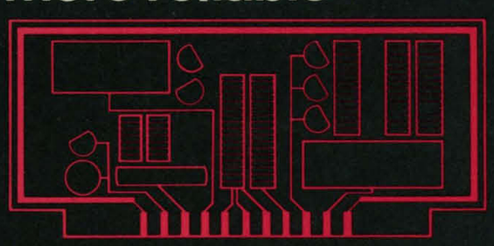


a bigger, brighter display — read up to 50 feet away!

more information

operating mode — polarity sign — decimal point — automatically indicated.

more reliable



the 701 uses the latest all solid-state design with plug-in integrated circuits and circuit cards for fast service.

more features

compact — takes up less bench top space! 0° to 30° tilt base puts the controls where you want them. electrode holder mounts right or left.

manual temperature compensator and slope indicator.

optional probe for automatic temperature compensation. separate slope adjustment in ATC mode for maximum precision.

buffer slope point control lets you slope the 701 on the pH buffer of your choice.

strip chart recorder output with span control.

COMPUTER COMPATIBILITY

binary-coded decimal output (8-4-2-1) for interfacing to printers, controllers and digital computers. only Orion makes a complete line of digital pH meter accessories.

ORION RESEARCH
11 Blackstone Street, Cambridge, Massachusetts 02139

Electronic slide rule with 11-digit accuracy

...and a memory too

You can produce logs and exponents instantly by simply touching a key on the Wang 360.

Wipe out all tediousness from technical, statistical and investment computations with the Wang 360 electronic calculator. Time consuming table look-up and interpolation is a thing of the past. Wang's unique approach to data manipulation enables you to generate $\sqrt{x}$, x^2, $\text{Log}_e x$ and e^x functions by simple key strokes. Instantaneous answers are displayed in large easy-to-read numerals with ten significant digits and **self positioning decimal** (you can specify a special trig keyboard if you need $\sin\theta$, $\cos\theta$, $\sin^{-1}x$ and $\tan^{-1}x$).

A special feature of the Wang 360 is its "scratch pad" memory system. Four extra storage registers hold constants, intermediate answers, or multiple results, for recall as you need them. Wang's building block approach gives you add-on capability for **hard copy printout,** card programming, and expansion into the powerful 370 programmable computing sub-system. For greatest economy, up to 4 keyboards operate concurrently from a briefcase-size electronics package. Cost of Model 360 is then as low as $1497.50 per keyboard* and Model 320 (without extra registers) $1282.50 per keyboard.*

Call your nearest Wang Office.

*Price in 48 contiguous states and District of Columbia.

The University Is Not a Highway Department

There is much wisdom and sophisticated opinion expressed in F. Kenneth Hare's article "How should we treat the environment?" (23 Jan., p. 352). But his arguments are based on an implicit assumption which is unfortunately shared by many influential people in our universities, and which needs to be seriously questioned: The assumption that the university *should* answer the current call to solve society's very pressing social problems.

Since World War II those of us in the universities have done many things other than objective, detached scholarship and research, but most of us did stop short of taking the responsibility for the solution of practical social and political problems. Where we did take on such responsibilities we usually assumed them as a personal responsibility, without making them a university or institutional commitment, for we were aware that politics is a difficult and not always a gentlemanly game and that what is valuable in the university—intellectuality—is fragile and likely to be damaged in the arena of real, national politics.

We should seriously consider the possibility of letting ourselves be bypassed, as Hare suggests may happen, if we do not answer the call to solve social problems. Will it be damaging to the general welfare if we in the universities say to federal and state officials: build new institutions for groups of intellectuals who are "more flexible," who will share with you the direct responsibility for the solution of practical problems. Being so bypassed would not be such a terrible fate. We would still have many worthwhile tasks to accomplish in the university. We can devote ourselves to undergraduate education which in the past has not received a fair share of the resources of the major universities; we can devote ourselves to the education and training of fewer but more scholarly graduate students, allowing the less scholarly and more politically interested students to enter the new institutions. We can devote ourselves to our fundamental and applied research activities which will, *perhaps,* help in the solution of social problems. Some of us can engage in intellectual activities designed to assist in the solution of social problems, but we can leave the actual responsibility for the solution of those problems to others in the new institutions—with, perhaps, some consultation if the new institutions need assistance.

I am aware that in some sense the university will be "hurt" if such a strategy is adopted. It will not receive the sums of money that the private foundations and the federal and state governments promise to those who will actively try to solve our current, pressing social problems. But what the university will lose in the race for resources, it will gain by not suffering the blows that inevitably come to the more "flexible" and politically responsive organizations.

Perhaps we in the university should leave the actual solution of political and social questions to men of action as we have in the past. These men control enormous resources and can create laboratories and research organizations to assist them. Perhaps the universities should leave the actual solution of foreign policy problems to the President, the Secretary of State, and the groups of scholars and advisers they call upon. Perhaps the universities should leave the actual defense of the country to the Department of Defense and its intellectual advisers. Perhaps we should leave conservation to the Department of the Interior together with the intellectual apparatus it creates. Perhaps we can leave the construction of highways and trains to the Department of Transportation.

As individuals and citizens we can contribute to the solution of all these problems by political action. As scholars we can produce ideas that may help men of action. But it might be best to recall that the university is not the Department of State, nor the Department of Defense, nor the Department of Housing. Most of all, we can remind ourselves that the university is not a highway department.

Matheson has gas mixtures for all pollution and vehicle emission studies

Study our list! Matheson has full availability of these important calibration mixtures in any suitable background: Carbon Monoxide . . . Carbon Monoxide & Carbon Dioxide . . . Hexane . . . Hydrogen Sulfide . . . Methane . . . Nitric Oxide . . . Nitrogen Dioxide . . . Propane . . . Sulfur Dioxide. These mixtures may be ordered in a wide range of cylinder sizes to meet your individual requirements.

Matheson has the technology to condition cylinders in a manner to provide stable analyzed mixtures—H_2S and SO_2 to the 0.1 ppm level. Matheson's improved analytical techniques—the most accurate partial pressure and volumetric techniques available—assure extreme precision and accuracy.

Ready availability of these specialized products is another example of Matheson's continuing leadership in the preparation and analysis of gas mixtures. For more information on Matheson's capability in pollution and vehicle emission studies in particular and Matheson gas mixtures in general, fill out and mail the handy coupon. 22-70G

Dialux®

Dialux is the latest member of our new generation of Leitz trend-setting microscopes. The maximum in laboratory microscopes... in looks, in refinements, in capability.

Whether your daily work load demands visual observation or photomicroscopy in darkfield, fluorescence, polarized light, phase contrast, or conventional brightfield, this remarkable instrument handles it with competence... and handles it day in, day out with ease.

Microscopy of the 70s will look even brighter through the lenses of your Dialux, the last word in future microscopes.

Overeducation

Persons with more education have higher average incomes than do persons with less. It is also true that a considerable number of college graduates work at jobs that in earlier years were almost always filled by nongraduates, and that to a large extent still are. The usual conclusion has been that vocational competence is significantly increased by additional education.

Ivar Berg* has reported a number of studies of the relations between a worker's years of schooling and several aspects of his job performance. He concludes that an increasing percentage of workers are employed in jobs that utilize less education than they possess; that in many jobs experience is a better indicator of earnings than is education; that workers with more education show higher turnover rates and more dissatisfaction than do those with less; and that measures of aptitude are better than amount of education in predicting performance and earnings.

Paul Taubman and Terence J. Wales † have compared the earnings of college graduates with the earnings of equally bright high school graduates. Their results confirmed the usual finding that college graduates earn more money, but they also found that earnings differentials almost disappear within occupational categories. Bright salesmen earn more than dull ones, but college graduate salesmen earn no more than high school graduate salesmen of the same intelligence level.

In medicine, college teaching, and some other fields, the essentiality of higher education would meet with little challenge. In a number of other fields, higher education does not so directly contribute to occupational competence, and within these occupations the amount of education is poorly correlated with income. Nevertheless, it remains true that college graduates as a group have higher incomes than nongraduates, partly because they tend to be brighter, partly because some of them enter professions that reward them for the necessary higher education, and partly because some employers overvalue formal credentials and employ college graduates at entry levels higher than those open to otherwise comparable nongraduates.

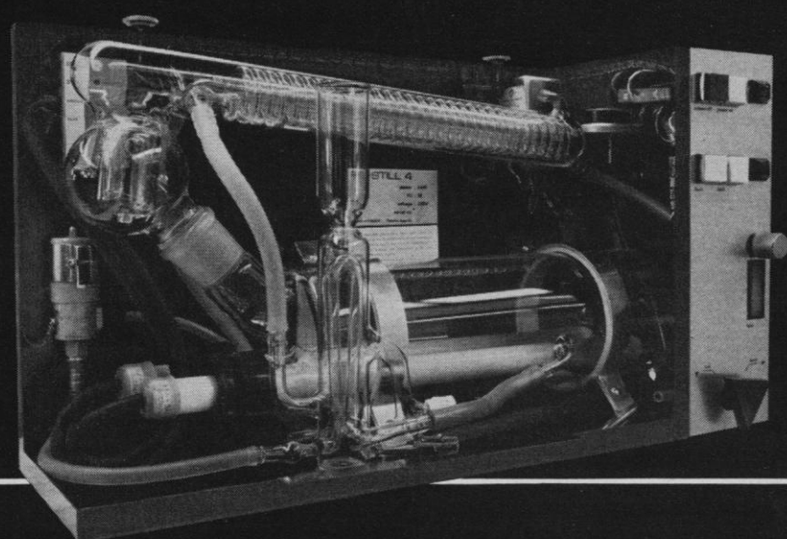
When a diploma is used as an employment screening device rather than as evidence of necessary qualifications, recruitment costs may be lowered, but what the employer saves must be paid for by someone else. Overemphasis on academic degrees discriminates against potential workers who have the necessary abilities but lack the required credentials, and it transfers part of the cost of employee selection to educational budgets and to the substantial number of young people who remain in college to secure employment credentials rather than to acquire greater competence or further education.

In the future, the relation between years of schooling and occupational performance may become even less close, for the disruptions that now afflict schools and colleges and the growing demand for ungraded courses and completely free elective programs are likely to make the time a student is enrolled in school and college an even poorer predictor of his adult competence.

To deemphasize "credentialism" will require that employers make greater efforts to evaluate applicants as individuals instead of treating them as members of educational classes. This change would be helped by better means of assessing aptitudes and by better records and measures of proficiency. It may be disquieting to some people to learn that the military services have progressed farther in these directions than have most civilian employers.—DAEL WOLFLE

* I. Berg, *Education and Jobs: The Great Training Robbery* (Praeger, New York, 1970).
† P. Taubman and T. J. Wales, Wharton School of Finance and Commerce, University of Pennsylvania, personal communication concerning an investigation of the benefits of higher education being conducted for the National Bureau of Economic Research.

They laughed when I set it on the lab bench.



The Other Glass Still had just produced a respectable distillate. There were appreciative murmurs throughout the lab.

Sensing a chance to prove my mettle in a dramatic way, I confidently strode forward with the Barnstead FI-STILL 4.™ "Too small," some said. Others remarked, "Too handsome – can't be right for a lab."

I cleared a small spot on the lab bench (just 20″ x 11⅝″ x 8″) for my discovery. A silence fell as FI-STILL 4 produced a full 4 liters of pyrogen-free distillate within the hour. I pointed out that the other glass still costs 1½ times as much per liter per hour of capacity.

"Amazing."

"How does it work?" they asked.

"Automatically," I modestly replied. I pointed out the remarkable constant level syphon. The built-in flow meter and automatic start/stop features. I showed them the push button controls for all operations.

Next, I displayed the matching storage tank with a 15-liter capacity. They had guessed by now that it automatically called for water after 2.5 liters had been drawn off.

Then, I took the wraps off The FI-STILL 4. There was a hush as the complete glass design was revealed.

My associates were chastened. They quietly left to learn more about FI-STILL 4. From their local Barnstead dealer or Barnstead Company, 225 Rivermoor Street, Boston, Massachusetts 02132. Telephone (617) 327-1600.

AAAS Symposia as Textbooks

Man, Culture, and Animals

The third printing of *Man* . . . will be available on 1 May. First published in 1965, it is being used increasingly as a college textbook in anthropology. It grew out of a AAAS symposium, "The Role of Animals in Human Ecological Adjustments."

Edited by Anthony Leeds and Andrew P. Vayda. 304 pages. Bibliography. Retail price: $8. AAAS member price when payment is sent with order: $7.

Air Conservation

Recent emphasis on the environment has put this 5-year-old AAAS volume into the textbook category. *Air Conservation* is the Report of the Air Conservation Commission of the AAAS, James P. Dixon, Chairman. The volume has suddenly found wide use by environment-conscious students and teachers.

2nd printing. 1968. 348 pages. Illustrated. Bibliography. Index. Retail price: $8. AAAS member price when payment is sent with order: $7.

14–18. **Botanical** Soc. of America, northwestern section, New London, Conn. (R. K. Zack, Dept. of Botany, Drew Univ., Madison, N.J. 07940)

14–18. American **Nuclear** Soc., Los Angeles, Calif. (O. J. Du Temple, 244 E. Ogden Ave., Hinsdale, Ill. 60521)

14–18. National **Plastics** Exposition and Conf., Cleveland, Ohio. (L. P. Williams, 250 Park Ave., New York 10017)

14–19. **Air Pollution Control** Assoc., 63rd annual, St. Louis, Mo. (A. Arch, 4400 Fifth Ave., Pittsburgh, Pa. 15213)

14–19. **Mass Spectrometry** and Allied Topics, 18th annual conf., San Francisco, Calif. [J. M. McCrea, Applied Research Lab. (73), U.S. Steel Corp., Monroeville, Pa. 15146]

14–19. American Soc. of **Medical Technologists,** Detroit, Mich. (S. B. Friedheim, Suite 1600, Hermann Professional Bldg., Houston, Tex. 77025)

14–19. Canadian Assoc. of **Pathologists,** Winnipeg, Man. (C. W. Penner, Winnipeg General Hospital, Winnipeg 3)

15–16. **Catalytic Hydrogenation and Analogous Pressure Reactions,** 3rd conf., New York, N.Y. (L. R. Neville, New York Acad. of Sciences, 2 E. 63 St., New York 10021)

15–17. American **Neurological** Assoc., 95th annual, Atlantic City, N.J. (S. A. Trufant, Cincinnati General Hospital, Cincinnati, Ohio 45229)

15–17. National Conf. of **Standards Laboratories,** Gaithersburg, Md. (R. J. Barra, Westinghouse Defense and Space Center, P.O. 746, Baltimore, Md. 21203)

15–18. American Soc. for **Engineering Education,** Columbus, Ohio. (W. L. Collins, 2100 Pennsylvania Ave., NW, Washington, D.C. 20037)

15–18. American **Meteorological** Soc. Symp., Boulder, Colo. (J. London, Dept. of Astro-Geophysics, Univ. of Colorado, Boulder 80302)

15–18. **Tissue Culture** Assoc., 21st annual, Washington, D.C. (V. P. Perry, American Foundation for Biological Research, 11125 Rockville Pike, Rockville, Md. 20853)

15–19. International Symp. on **Information Theory,** Noordwijk, Netherlands. (P. E. Green, Jr., M.I.T. Lincoln Lab., Lexington, Mass. 02173)

15–19. **Nuclear Data for Reactors,** 2nd intern. conf., Helsinki, Finland. (J. H. Kane, Div. of Technical Information, U.S. Atomic Energy Commission, Washington, D.C. 20545)

15–19. **Vacuum Metallurgy,** intern. conf., Anaheim, Calif. (E. L. Foster, Battelle Memorial Inst., 505 King Ave., Columbus, Ohio 43201)

15–19. American **Water Resources** Assoc. Conf., Milwaukee, Wis. (G. Karadi, Dept. of Applied Sciences and Engineering, Univ. of Wis., Milwaukee 53201)

16–17. **Environmental Variables in Animal Experimentation,** 2nd annual, Metropolitan Branch, American Assoc. for Lab. Animal Science, New Brunswick, N.J. (D. Miller, Smith Kline & French, 1500 Spring Garden St., Philadelphia, Pa.)

16–18. Conference on **Cold Forming of Metal Parts,** Cleveland, Ohio. (J. A. Fellows, American Soc. for Metals, Metals Park, Ohio 44073)

16–18. American **Helicopter** Soc., 26th annual natl. forum, Washington, D.C. (H. M. Lounsbury, 30 E. 42 St., New York 10017)

16–19. Canadian **Psychiatric** Assoc., 20th annual, Winnipeg, Man. (W. A. Blair, 225 Lisgar St., Ottawa, Ont., Canada)

17–18. European **Dialysis and Transplant** Assoc., 7th annual, Barcelona, Spain. (W. Drokker, 75 de Lairessestraat, Amsterdam, Netherlands)

17–19. **Cryogenic Engineering** Conf., Boulder, Colo. (J. L. Smith, Jr., Rm. 41-204, Massachusetts Inst. of Technology, Cambridge, Mass. 02130)

17–20. American **Rheumatism** Assoc., Detroit, Mich. (M. M. Walsh, 1212 Ave. of the Americas, New York 10036)

17–21. American **Therapeutic** Soc., Chicago, Ill. (R. T. Smith, 37 Narbrook Pk., Narberth, Pa. 19072)

17–24. **Chemical Engineering** and Congr. of **Chemical Engineers,** Frankfurt-am-Main, Germany. (J. Dohent, Natl. Chemical Exposition, 86 E. Randolph St., Chicago, Ill. 60601)

18–19. Current Concepts of the **Histol-**

ogy of the Oral Mucosa Symp., Chicago, Ill. (C. A. Squier, College of Dentistry, Univ. of Illinois at the Medical Center, Chicago 60680)

18–20. **Bibliographical** Soc. of America, Philadelphia, Pa. (W. H. Bond, Houghton Library, Harvard Univ., Cambridge, Mass. 02138)

18–20. American Assoc. of **Bioanalysts**, New York, N.Y. (D. Birenbaum, 802 Ambassador Bldg., St. Louis, Mo. 63101)

20–25. American Soc. of **Radiologic Technologists,** Miami Beach, Fla. (G. J. Eilert, 527 S. Main St., Fond du Lac, Wis. 54935)

21–24. American **Dairy Science** Assoc., 65th annual, Gainesville, Fla. (C. Cruse, 903 Fairview Ave., Urbana, Ill. 61801)

21–24. American **Leather Chemists** Assoc., Lake Placid, N.Y. (M. T. Roddy, c/o Tanners Council Research Laboratories, Univ. of Cincinnati, Cincinnati, Ohio 45221)

21–25. American Association for the **Advancement of Science,** Pacific Div., Berkeley, Calif. (R. C. Miller, California Acad. of Sciences, Golden Gate Park, San Francisco 94118)

21–25. American **Medical** Assoc., Chicago, Ill. (W. E. Burmeister, 535 N. Dearborn St., Chicago, Ill. 60610)

21–25. American **Veterinary Medical** Assoc., Las Vegas, Nev. (D. A. Price, 600 Michigan Ave., Chicago, Ill. 60605)

21–26. American Soc. for **Testing and Materials,** Toronto, Ont., Canada. (T. A. Marshall, Jr., ASTM, 1916 Race St., Philadelphia, Pa. 19103)

22–24. International Conf. on the Role of **Tryptophan Metabolism in Biochemistry and Pathology,** Madison, Wis. (T. C. Meyer, Univ. of Wisconsin, Madison 53706)

22–25. Canadian Soc. of **Agronomy**, Ottawa, Ont. (R. Loiselle, Ottawa Research Sta., Central Experimental Farm, Ottawa)

22–25. Symposium on **Bioinorganic Chemistry**, Blacksburg, Va. (R. E. Dessy, Dept. of Chemistry, Virginia Polytechnic Inst., Blacksburg 24061)

22–25. Canadian Soc. of **Horticultural Science**, Ottawa, Ont. (E. C. Lougheed, Dept. of Horticulture, Univ. of Guelph, Guelph, Ont.)

22–25. American Assoc. of **Petroleum Geologists**, Calgary, Alta., Canada. (J. M. Browning, Tenneco Oil and Minerals, P.O. Box 1051, Calgary)

22–25. Canadian Soc. of **Soil Science**, Ottawa, Ont. (A. R. Mack, Central Experimental Farm, Ottawa)

22–25. **Thyroid** Conf., 6th annual, Vienna, Austria. (R. Hofer, c/o Wiener Medizinische Akademie, Alserstrasse 4, A-1090, Vienna)

22–26. American Assoc. of **Avian Pathologists**, Inc., Las Vegas, Nev. (G. H. Snoeyenbos, Univ. of Massachusetts, Amherst 01002)

22–27. **Mathematical Statistics and Probability**, 6th, Berkeley, Calif. (E. L. Scott, Dept. of Statistics, Univ. of California, Berkeley 94720)

23–26. State of the Art in **Corrosion Testing Methods** Symp., Toronto, Canada. (W. H. Ailor, American Soc. for Testing and Materials, Reynolds Metals Co., 4th and Canal Sts., Richmond, Va. 23218)

24. **Biometric** Soc., Western North American regional, Berkeley, Calif. (J. S. Williams, Statistical Lab., Colorado State Univ., Fort Collins 80521)

24–26. National **Aeronautics and Space** Administration, Ames Research Center, Moffett Field, Calif. (M. R. Heinrich, NASA, Ames Research Center, Moffett Field 94035)

24–26. American **Automatic Control** Conf., Atlanta, Ga. (D. Lyons, Dept. of Textiles, Clemson Univ., Clemson, S.C.)

24–26. **Equipment Manuals** Symp., Washington, D.C. (R. Post, Dept. of the Army, Materiel Command, Washington, D.C. 20315)

24–26. **Extreme Environments**: Microbial Adaptation. (M. R. Heinrich, Natl. Aeronautics and Space Administration, Ames Research Center, Moffett Field, Calif. 94035)

24–26. Canadian **Wood Chemistry** Symp., 3rd, Vancouver, B.C. (D. A. I. Goring, Pulp and Paper Research Inst. of Canada, 570 St. John's Rd., Pointe Claire, P.Q.)

24–27. **Drugs and Cerebral Function** Symp., 2nd annual, Denver, Colo. (M. L. Smith, Suite 1120, 2045 Franklin, Denver 80205)

24–27. **Hydrobiology**, natl. symp., Miami Beach, Fla. (J. C. Warman, Water Resources Research Inst., Auburn Univ., Auburn, Ala. 36830)

24–27. Western Soc. of **Malacologists**, 3rd annual, Stanford, Calif. (C. Skoglund, 3846 E. Highland Ave., Phoenix, Ariz. 85018)

24–1. International Symp. on **Mechanical Properties and Processes of the Mantle**, Flagstaff, Ariz. (L. R. Sykes, Columbia Univ., Palisades, N.Y. 10964)

25–27. **Leukocyte Culture** Conf., 5th, Ottawa, Canada. (J. Harris, Ottawa General Hospital, Ottawa 2)

28–2. **Health Physics** Soc., 15th annual, Chicago, Ill. (W. J. Blair, Biology Dept., Battelle Northwest, Richland, Wash. 99352)

28–4. American **Library** Assoc., Detroit, Mich. (D. H. Clift, Executive Director, The Association, 50 E. Huron St., Chicago, Ill. 60611)

28–4. American **Optometric** Assoc., 73rd annual congr., Honolulu, Hawaii. (G. Allen, Jr., 7000 Chippewa St., St. Louis, Mo. 63119)

28–4. **Radiation Research**, 4th intern. congr., Evian, France. (J. F. Duplan, Fondation Curie, 26 rue d'Ulm, F-75-Paris 5e, France)

29–1. **Drug Metabolism in Man**, New York, N.Y. (E. S. Vesell, Pennsylvania State Univ. College of Medicine, Hershey, Pa.)

29–1. American Soc. of **Heating, Refrigerating and Air Conditioning**, Kansas City, Mo. (J. T. Szabo, 345 E. 47 St., New York 10017)

29–1. Society for **Industrial and Applied Mathematics**, Denver, Colo. (N. Bleistein, Dept. of Mathematics, Univ. of Denver, Denver 80210)

29–1. **Water Quality Management Data and Instrumentation**, Madison, Wis. (I. Grossman, New York State Dept. of Health, 84 Holland Ave., Albany 12208)

29–3. International Conf. of **Operational Research** Soc. and Inst. of **Management**

Sciences, London, England. (Mrs. M. Kinnaird, Operational Research Soc. Ltd., 62–64 Cannon St., London E.C.4)

30–3. American **Dental** Soc. of Europe, Dublin, Eire. (D. Derrick, 140 Park Lane, London W.1, England)

July

1–3. Institute of **Navigation**, 25th annual, Colorado Springs, Colo. (R. E. Freeman, Suite 832, 815 15th St., NW, Washington, D.C. 20005)

1–4. Canadian **Dental** Assoc., Winnipeg, Man. (J. P. Beattie, 435 Academy Rd., Winnipeg 9)

1–6. National **Education** Assoc., San Francisco, Calif. (S. M. Lambert, NEA, 1201 16th St., NW, Washington, D.C. 20036)

2–3. American Inst. of **Aeronautics and Astronautics** and **Canadian Aeronautics and Space** Inst. joint meeting, Toronto, Ont., Canada. (H. C. Luttman, 77 Metcalfe St., Ottawa 4, Ont.)

5–9. **Agricultural Pesticide** Soc., Ottawa, Ont., Canada. (W. H. Minshall, Research Inst., Canada Agriculture, University Sub Post Office, London, Ont.)

5–9. Canadian Soc. of **Agronomy**, Ottawa, Ont. (R. Loiselle, Ottawa Research Sta., Central Experimental Farm, Ottawa)

5–9. Canadian Soc. of **Soil Science**, Ottawa, Ont. (A. R. Mack, Soil Research Inst., Central Experimental Farm, Ottawa)

6–10. **Microwave Spectroscopy** Conf., Bangor, England. (Meetings Officer, Inst. of Physics and The Physical Soc., 47 Belgrave Sq. London S.W.1, England)

6–10. Urban **Water Resources Management** Conf., Henniker, N.H. (K. R. Wright, Wright Water Engineers, Denver, Colo.)

6–11. Symposium on Applications of **Holography**, Besancon, France. (J. Ch. Vienot, Laboratoire de Physique Générale et Optique, Faculté des Sciences, Univ. de Besancon, 25 Besancon, France)

6–12. Society of **Nuclear Medicine**, Washington, D.C. (M. Glos, 211 E. 43 St., New York 10017)

7–9. Conference on **Scanning Electron Microscopy in Materials Science**, Newcastle upon Tyne, England. (E. H. Boult, School of Chemistry, The University, Newcastle upon Tyne)

7–9. Conference on **Modern Welding Techniques**, New York, N.Y. (J. A. Fellows, American Soc. for Metals, Metals Park, Ohio 44073)

7–10. **Catalytic Oxidation Principles and Processes**, intern. symp., London, England. (J. F. Gibson, Chemical Soc., Burlington House, London)

7–10. International Conf. on the **Chemistry and Physics of Organic Scintillators** and **Liquid Scintillation Counting**, San Francisco, Calif. (C. T. Peng, School of Pharmacy, Univ. of California, San Francisco 94122)

7–10. Symposium on **Stock and Recruitment**, Aarhus, Denmark. (L. R. Day, Intern. Commission for Northwest Atlantic Fisheries, P.O. Box 638, Dartmouth, Nova Scotia, Canada)

8–10. American Soc. of **Agricultural Engineers**, 63rd annual, Minneapolis, Minn. (J. L. Butt, P.O. Box 229, St. Joseph, Mich. 49085)

8–10. Symposium on **Non-Aqueous Electrochemistry**, Paris, France. (J. Badoz-Lambling, Laboratoire de Chimie Analytique, 10 rue Vauquelin, Paris 5)

8–10. Western **Resources** Conf., Denver, Colo. (J. J. Schanz, Jr., Denver Research Inst., Univ. of Denver, Denver 80210)

8–11. World Congress of **Digestive Endoscopy**, 2nd, Copenhagen, Denmark. (S. Stoichita, 29 ree Pitar Mos, Bucharest, Rumania)

9–10. Texas **Water Pollution Control** Assoc., 9th conf., Houston, Tex. (H. N. Myrick, Dept. of Civil Engineering, Univ. of Houston, Houston 77004)

12–16. **Powder Metallurgy**, 3rd intern. conf., New York, N.Y. (P. K. Johnson, Metal Powder Industries Federation, 201 E. 42 St., New York 10017)

12–18. International Soc. of **Gastroenterology**, 4th world congr., Copenhagen, Denmark. (M. Andreassen, Univ. Kirurgiske Klinik C., Rigshospitalet, Copenhagen).

12–18. **Photochemistry**, 3rd intern. symp., St. Moritz, Switzerland. (D. Bryce-Smith, Dept. of Chemistry, Univ. of Reading, Reading, England)

12–18. International Soc. of **Urology**, 15th congr., Tokyo, Japan. (T. Ichiawa, 1 Toyamacho, Shinju Ku, Tokyo)

13–15. American Assoc. of **Physicists in Medicine**, Washington, D.C. (J. A. Hancock, Jr., Box 2546, Malcolm Grow USAF Hospital, Andrews Air Force Base, Washington, D.C. 20331)

13–17. American Soc. of **Civil Engineers**, Boston, Mass. (W. H. Wisely, ASCE, 345 E. 47 St., New York 10017)

13–17. **Engineering Foundation Research** Conf., Henniker, N.H. (F. P. Huddle, Reference Service, Library of Congress, Washington, D.C.)

13–17. National Policy for **Materials**, Henniker, N.H. (F. P. Huddle, Library of Congress, Washington, D.C.)

13–17. **Transportation and Engineering**, Boston, Mass. (W. H. Wisely, American Soc. of Civil Engineers, 345 E. 47 St., New York 10017)

14–16. **Electromagnetic Compatibility**, internat. symp., Anaheim, Calif. (J. C. Senn, P.O. Box 1970, Anaheim 92803)

15–23. **World Water Balance**, intern. symp., Reading, England. (R. L. Nace, U.S. Geological Survey, Water Resources Div., Washington, D.C. 20242)

16–19. American Soc. of **Extra-Corporeal Technology**, 8th intern. conf., New Orleans, La. (E. C. Berger, 287 E. Sixth St., St. Paul, Minn. 55101)

16–20. American **Malacological** Union, 36th annual, Key West, Fla. (A. Solem, Field Museum of Natural History, Chicago, Ill. 60605)

17–18. Rocky Mountain **Cancer** Conf., Denver, Colo. (D. G. Derry, Colorado Medical Soc., 1809 E. 18th Ave., Denver 80218)

19–24. American Assoc. of **Clinical Chemists**, 22nd natl., Buffalo, N.Y. (D. A. Pragay, P.O. Box 38, Buffalo 14215)

20–22. American Inst. of **Aeronautics and Astronautics**, Detroit, Mich. (W. I. Marble, 2 Pennsylvania Plaza, New York 10001)

20–22. Society of **Automotive Engineers**, Detroit, Mich. (W. I. Marble, 2 Pennsylvania Plaza, New York 10001)
