

and more laborious than was thought originally. The chapters on the mechanism of formation and action of interferon likewise reflect the complexity of these processes.

The problems inherent in the assays used to measure interferon activity are discussed at length. An argument is made for calibrating laboratory reference interferons against national research standard interferons, so that potencies of all interferons from one animal species could be given in terms of a common "international unit" and results from different laboratories could be compared directly. This is undeniably the ideal goal. Unfortunately, the book does not deal with the question whether, with the current state of the art of interferon assays and without a rigorously defined reference unit, it might be better to report uncorrected titers with comparisons with national standards rather than merely corrected titers.

Considerable information is provided about interferon inducers, especially the nonviral inducers which have been receiving increased attention for potential clinical development. The synthetic polyribonucleotide inducers of antiviral resistance had not been discovered in 1966 when the previous edition was published; the antiviral, toxic, and other pharmacologic properties of this group of inducers are discussed extensively in the new one. The treatment of low-molecular-weight interferon inducers, such as tilorone, is also quite inclusive through the literature of 1971. The relationship of these nonviral inducers and interferon to growth of viruses and other agents (*Chlamydia*, Protozoa, *Rickettsia*, and bacteria) is covered in detail. Several contributors emphasize the pleiotropic effects of these nonviral inducers; the close relationship of inducers and interferon to the reticulo-endothelial system and the immune system is noted. There is an excellent discussion of the relative advantages and disadvantages of the use of inducers and of exogenous interferon in treatment of viral diseases in humans.

Of particular value is the chapter on interferon, tumors, and tumor viruses. Here M. N. Oxman has attempted, with considerable success, to provide a critical review of available information concerning the interactions of interferons and inducers with tumor cells and with oncogenic viruses and the factors that must be considered in designing and evaluating experiments investigating these interactions. The gen-

eral conclusion is that tumor viruses, like other viruses, vary in ability to induce interferon and in sensitivity to its action. The interferon system itself appears likely to be one of several host defenses that contribute to natural resistance to viral neoplasia, and interferon inducers or exogenous interferon preparations should be considered for controlled studies in selected cancer patients.

Research on interferon is still growing rapidly, and, as K. H. Fantes writes in one chapter, "new findings have often uncovered new difficulties instead of overcoming old ones." However, a volume of this nature provides the opportunity for reflecting on the overall progress that has been made over the last 16 years. The contributors have attempted, with varying degrees of success, to come to grips with the expanding and conflicting literature. At times the reader (particularly if he is not directly in the field) would benefit from greater attempts at clarification and evaluation of the available information. However, the volume is the most complete source available of general information about interferon. Finter and the other contributors can be assured that it will serve as a valuable reference.

Parasites

The Coccidia. *Eimeria*, *Isospora*, *Toxoplasma*, and Related Genera. DATUS M. HAMMOND and PETER L. LONG, Eds. University Park Press, Baltimore, and Butterworths, London, 1973. x, 482 pp., illus. \$24.50.

This book is concerned with members of the order Eucoccidiorida, which contains protozoan parasites of man and of domestic and wild animals and birds. From an economic standpoint this is an important group to the livestock industry, particularly cattle and poultry producers. Research in the past three years has confirmed the coccidian nature of the ubiquitous parasite *Toxoplasma gondii*. This parasite and *Isospora* species are pathogens of man.

The book contains 10 chapters, each by a well-known researcher who summarizes his own work and that of others in the field. The chapters cover history and taxonomy, host and site specificity, life cycles and development, ultrastructure, cytochemistry, and physiology and

biochemistry of the Coccidia, as well as cultivation in avian embryos and cell cultures, pathology, pathogenicity, immunity, and techniques used for the study of Coccidia. One chapter deals with *Toxoplasma* and related organisms.

In the preface Datus Hammond states that the book is an attempt to provide an up-to-date coverage of the general aspects of the Coccidia and their relationships with their hosts. This objective has been well accomplished. Although most of the information has been published elsewhere, a comprehensive review of the biology of the Coccidia has not been attempted since 1934. To my knowledge this is the first time that a detailed history of the flux of the taxonomic status of the Coccidia has been written, and the chapter on techniques is also the first review of its subject. In the preface it is stated that no detailed consideration is given to chemotherapy because the subject could not be adequately covered in a single chapter. It is unfortunate that chemotherapy is not considered in an otherwise comprehensive review.

The book is well done in that errors or misstatements are rare. Figures are used throughout the book, and most of them are of high quality, especially the photomicrographs and electron micrographs. The book will prove useful not only to researchers dealing with Coccidia but to other biologists as well. I regret that such an excellent review of the literature on the Coccidia was not available when I began to work with this important group of parasites.

The Origin of Landscapes

A Synthesis of Geomorphology

H. F. GARNER, Rutgers University. □ Perhaps the most substantial re-assessment of geomorphological theory in a half century, this volume identifies the environments in which landforms develop and the processes characteristic of these environments as they evolve in time and space. The author emphasizes associations of processes and presents unique chapters on tectonics, alternating arid-humid geomorphic systems, and coasts.

Is your lab suffering from supplieritis?

The symptoms are easy enough to spot. A rash of suppliers, catalogs, supplier salesmen. All clamoring for your attention. All making life difficult.

The cure: Schwarz/Mann. One source of supply for almost all of your needs.

At Schwarz/Mann, we supply radiochemicals, radioimmunoassay products, amino acids, peptides, ultra pure reagents, tissue culture media, semi-automatic pipettes, and a host of other products for the research lab.

All of them of extremely high quality. All of them backed up by famous Schwarz/Mann service, including our Product Analysis Reports (shipped with each order), and our monthly re-assay of lots already shipped (so you can check lot-stability with us anytime).

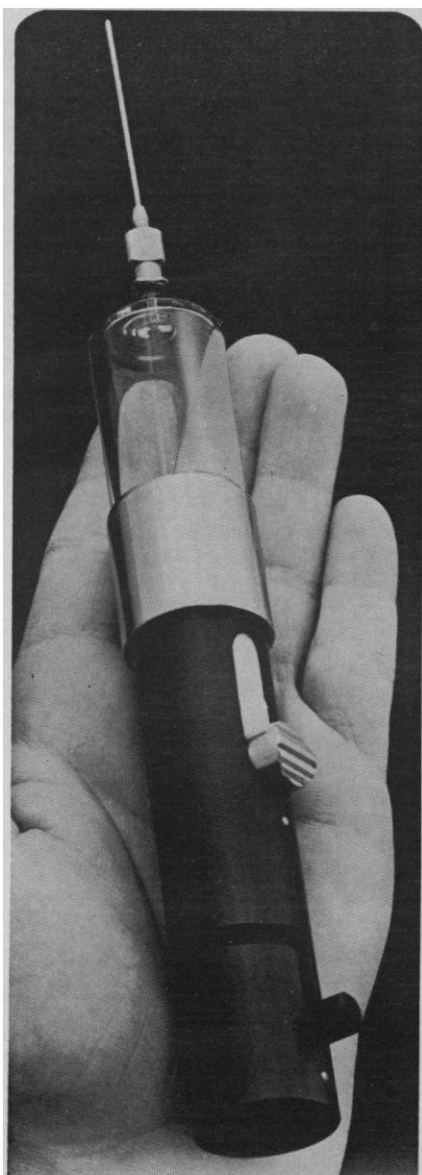

Why not keep us in mind during your next bout of supplieritis? Your prognosis is looking better already.

Our catalog line of carbon-14 labeled compounds isn't large enough to make us complacent. But it is big. In fact it's about the largest selection of C-14 labeled compounds you will find anywhere available from a catalog.

And it's always growing larger. There are over 700 research chemicals labeled with carbon-14 in 10 product groups, including amino acids, bile acids, drugs and related chemicals, insecticides and pesticides, nucleosides, nucleotides, organic intermediates, polynuclear aromatics, steroids, purines and pyrimidines. We also feature a growing list of tritium labeled compounds, to round out our product line.

A large and growing line is fine — but it's not enough. Each Mallinckrodt product comes to you in a revolutionary see-thru protective package, with thorough documentation of purity. Radiochromatographic profiles from at least two different chromatography systems are included with each labeled compound. And with each product in Mallinckrodt's guarantee-of-purity certificate.

Sound like too much to hope for? Try us. Write or phone (314) 291-8191 for our new catalog. See for yourself.

Check these catalog C-14 labeled compounds — many available only from Mallinckrodt.

SQUIRTERS' CHOICE...

Nalgene® Wash Bottles

For every lab rinsing, dispensing and washing need, Nalge has the bottle. And every one is unbreakable, chemically-inert, non-contaminating.

Nalgene Economy Wash Bottles (Cat. No. 2401) offer unrestricted control of rate, volume and direction of stream. One-piece, flexible polyethylene dip tube can be bent at different angles without crimping, breaking or cracking. Tapered, molded tip can be cut back to increase flow or removed for maximum flow. Uniform walls of conventional polyethylene permit almost effortless operation without weakspots. Six sizes: 30-1000 ml.

Nalgene Wash Bottles (No. 2402) are molded in one piece (bottle and tube) by a patented process—eliminating any possibility of leakage. No tipping or shaking necessary to empty completely. Four sizes: 125-1000 ml.

Nalgene Teflon FEP Wash Bottles (No. 2403) handle strong solvents or liquids which might damage other plastics. Autoclavable—use them where no contamination is acceptable. For use at temperatures as low as -200°C , as high as $+200^{\circ}\text{C}$. Four sizes: 125-1000 ml.

Nalgene Safety Wash Bottles (No. 2404) molded of red conventional polyethylene for high visibility, with vertically ribbed surface for accurate touch identification. Indicate inflammable or dangerous contents. Protect light sensitive liquids. Two sizes: 250 and 500 ml.

Order from your Lab Supply Dealer. For details write Dept. 4211C, Nalgene Labware Division, P.O. Box 365, Rochester, N.Y. 14602.

an ISCO Golden Retriever

fetches fractions with a flourish

An ISCO Model 328 Golden Retriever offers you many exclusive features. **Handles 3 to 70ml test tubes, or scintillation vials**, in removable, self-standing racks. **Push button programming** for digital selection of time, drop, or volumetric increments. Illuminated digital display. **Delay timer** to synchronize tube contents with recorder event marks for precise location of fractions. **Immersible, lift-off mechanism** is easy to clean. **Anti-condensation devices** protect electronics in the coldroom, even when instrument is off.

Golden Retrievers are priced from \$975 to \$1170. Send now for your copy of ISCO's current green catalog.

Two important new developments in acrylamide electrophoresis

These new products further extend the applicability of Ortec high-resolution electrophoresis in both research and clinical laboratories.

1. Pre-cast Gradipore™ gels— 14 sample wells in each flat slab encased in a disposable cell. Continuous sieving action through a gel gradient of 4% to 26% recrystallized acrylamide. Gradipore gels, ten to a box, all with exactly the same composition, eliminate the nuisance and the chance for error in casting your own. One-year shelf life assures a fresh gel when you need it.

2. New easy-to-operate Model 4310 Densitometer sees and counts single photons (the smallest quanta of light), resulting in stability and accuracy never before possible. Small region of special interest in a sample can be scanned separately and still produce a full-width trace. Large sample tray accommodates all electrophoresis and TLC media.

Share the Sparkling Facets of Sand and Sandstone with Your Students...

Sand and Sandstone is '... a thought provoking guide to the study of deposits of sand and sandstones. Any geologist would profit from reading the book. It will be the standard reference in its field for some time to come.' —*American Mineralogist*, May/June 1973

Sand and Sandstone

by
Pettijohn, Potter, and Siever

is now a *Springer Study Edition* at the new low price of \$14.50

Sand and Sandstone is an excellent text for advanced undergraduate and graduate courses in sedimentation, sedimentary petrology, and general petrology.

The authors summarize what is known about sandstones beginning with the components, their composition and geometrical properties, and progressing to the larger organization and structure of the whole rock itself. The processes of sand formation, transportation and deposition, and post-depositional alteration are included. The book concludes with a resumé of the relation of sands to their environment of deposition and their distribution in space and time. In a synoptic review of several better-known sedimentary basins, an integrated approach involving stratigraphy, sedimentary petrology, and paleocurrents, is used to clarify geologic history.

'... All three authors have a wealth of experience in this area (sedimentary petrography). . . . Particularly outstanding are the large number of superbly reproduced photomicrographs of thin sections that are effectively used to illustrate points made in the accompanying text. . . .' —*Science*, 3 November 1972

Sand and Sandstone. By **F. J. Pettijohn**, The Johns Hopkins University, Baltimore, Maryland; **Paul Edwin Potter**, University of Cincinnati, Cincinnati, Ohio; **Raymond Siever**, Harvard University, Cambridge, Massachusetts 1973. xvi, 618p. 258 illus. paper \$14.50 Cloth edition still available at \$31.10.

New Resin-Single Column System for your Amino Acid Analyzer

Now there's a new single column system for the complete analysis in three hours of the standard amino acids. No special buffers . . . no baseline shift . . . no filters needed . . . no special columns. It requires less sample, too. Guaranteed results or your money back. Why use two when one will do. Write for literature to James V. Benson, Jr., Hamilton Company, P.O. Box 17500, Reno, Nevada 89510.
