# The easy way to prepare RIA samples

The LKB Ultrolab® Sample Processor can be programmed to do the processing of your RIA samples at a fast rate, in batches of 100.

The LKB sample processor will transfer single or double samples to test tubes at the rate of 400 tubes an hour. And it will add up to 3 reagents at the rate of 800 an hour. The prepared sample is then given a thorough mixing by rapid rotation. The actual throughput is 100 samples in 15 minutes.

Suspensions of Sephadex and dextran-coated charcoal may be used to separate the bound antigens from the free antigens. As it is being dispensed, the suspension is agitated to prevent it from settling. And for the final measurements of radioactivity the samples can be transferred to the renowned LKB-Wallac automatic Gamma and Liquid Scintillation counters.

Remember, LKB can provide the complete system for RIA—from sample preparation right through to a digital printout of results. And specific samples such as standards can be positively identified in the printout.

## COVER

Flock of young homing pigeons returning to their loft. The initial orientation of individual birds released under overcast skies can be altered by changing the direction of the magnetic field around their heads. See page 180. [Lee R. G. Snyder, Stanford University, Palo Alto, California]

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

announcing one of the most important  
works ever published in virology!

## Comprehensive Virology

Edited by **Heinz Fraenkel-Conrat**, University of California at Berkeley  
and **Robert R. Wagner**, University of Virginia

A systematic, complete and critical review of the whole of virology—animal, plant, and bacterial—this major treatise, in approximately 22 volumes and more than 6000 pages, serves as the definitive up-to-date reference source for all students and research workers in the fields of microbiology, molecular and cell biology, genetics, cancer research and medicine.

Beginning with a catalogue of all known viruses, this giant work covers:

- the reproductive capacities and functions of the best understood viruses
- virus structure and assembly
- regulatory mechanisms and genetics
- the interaction of viruses and their hosts at both the monocellular and multicellular levels
- the effects of physical and chemical agents.

A **SPECIAL CHARTER SUBSCRIBER'S DISCOUNT** is available for this monumental work if a Continuation Order is placed now for all volumes in this treatise.

**CHARTER SUBSCRIBERS** will receive a **15% discount** off the list price of Volume 1 and all forthcoming volumes for the life of the treatise.

*just published*

# Photomicroscope III—there's room at the top because of what's in the middle and the bottom.

**The camera and the controls are completely integrated.** The completely automatic 35mm camera of Photomicroscope III is built into the microscope stand for ease of operation and stability. All the controls are built into the base for ready accessibility and compactness. So the top is free for the addition of whatever auxiliary documentation or observation equipment you may desire—such as the unique Zeiss Glarex Projection Screen, shown below.

**More light on the film.** With Photomicroscope III you can direct 98% of the light onto the film and still have enough for automatic exposure detection with no change in the setting for film sensitivity. This is particularly advantageous for fluorescence and polarizing photomicrography.

**Now, an automatic electronic flash**... a first in photomicrography. This built-in flash unit eliminates reciprocity failure and vibration problems and the need for color temperature compensation. And you still have, of course, the widest choice of illumination equipment for all microscope techniques in both transmitted and reflected light.

**Much more.** Get the whole story by writing Carl Zeiss, Inc., 444 Fifth Ave., New York, N. Y. 10018. Or call (212) 736-6070.

In Canada: 45 Valleybrook Drive, Don Mills 405, Ont., M3B 2S6. Or call (416) 449-4660.

# Take a close look at the DW-2<sup>TM</sup> UV-VIS Spectrophotometer

Stopped-Flow accessory easily replaces cell compartment. Note open area which allows use of a variety of accessories.

Monitor dials permit easy selection of 16 checkpoints for oscilloscope readout.

Function selection by push-button.

For a really close look at Aminco's new DW-2 Bulletin, contact American Instrument Company, Silver Spring, Maryland 20910.

Beam selector permits mode selection at the twist of a dial.

## K-K-K-KEL-VI-VINATOR. $-96^{\circ}\text{C}$ !

**We sell ultra-cold. Hair-cracking cold. Upright drops to  $-76^{\circ}\text{C}$ . Chest model sinks to  $-96^{\circ}\text{C}$ . And in over-all performance, we're the hottest cold buy around.**

We know what you need in the way of cold so we've designed our units to make you happy. Take the upright. Beyond the cold you need, you'll find convenience features like six French doors. Open one without losing the cold everywhere else. You can label each door. Know what's behind it.

What's good about the chest model? It gets colder. And the top can give you some more work surface. And here too we've come up with a great way for you to identify the location of everything that's in it.

More. Both have automatic alarm systems and 2" portholes to accommodate recorders. More importantly, both carry the name Kelvinator Commercial. The company that knows how to give you the best cold you ever had.

# Worthington Collagenase...

White fat cells, obtained by enzymatic digestion of parametrial adipose tissue as used in study of membrane mediated responses.

## specifically blended for cell isolation.

In microbiological studies of animal cells, it often is desirable to isolate and separate the cells for further study. The researcher's need is to separate the cells from the connective and cementing materials without damaging the cells themselves.

Many researchers found that a natural mixture of digestive enzymes produced by a non-toxigenic strain of the bacterium *Clostridium histolyticum* provided the separation remarkably well. The enzymes, without the toxin that many of the *Colstridia* produce, effectively digest away the materials connecting the cells into a tissue, but leave the cells themselves virtually untouched.

The enzyme mixture is named after its more unique member, *Collagenase*. Worthington supplies Collagenase in several degrees of purity ranging from crude to highly-purified; researchers have generally found that the less purified material is more effective in releasing intact cells from tissues. The effectiveness, however, seemed to differ with different tissues, and it did not always match the quantitative differences noted in our assay labs.

A program was therefore initiated by Worthington aimed at correlating effectiveness of samples on specific tissues with results of our own biochemical assays. We enlisted the support of several dozen prominent researchers; they evaluated more than a hundred samples of regular production and specially prepared lots of Collagenase in their own studies.

Evaluation of these studies has enabled us to categorize our crude Collagenase into four different types which are blended and classified according to the specific tissues for which each is best suited. The four types are available as listed in our current catalog.

TYPE	CHARACTERISTIC	TISSUE BEST SUITED
I	Normal balance	Fat cells; Adrenal tissue
II	High Clostridiopeptidase	Liver, Bone, Thyroid
III	Low Proteases generally	Mammary
IV	Low Tryptic activity	Pancreatic Islet cells

The increasing use of Collagenase in cell isolation is encouraging. Credit for the program's success is due to the many researchers who cooperated so openly with their time and talent.

Your comments and interest are welcome. Additional information on this application of Collagenase and a copy of our current catalog are available on request.

Worthington Biochemical Corporation | Freehold, New Jersey 07728 U.S.A.

# The Beckman L-5's are the Four Best Ultracentrifuges in the World.

From every standpoint, the new Beckman L-5's offer you more than any other preparative ultracentrifuges in the world.

The proven Beckman d.c. electric drives have an average life of over four billion revolutions. Their high torque gets rotors to speed rapidly—particularly important for the shorter runs with big volumes of sample. And the superior Beckman speed control holds rotors precisely at the set speed.

The L-5's have the extra containment needed to run the highest performance Beckman rotors, as well as the new ones now in design. (There are more than 30 Beckman rotors to choose from.)

Operation is simple even for an inexperienced operator, yet the L-5's have ample flexibility so that the investigator can change any parameter at will, should his experiment require it. The precise infrared radiometric temperature control system in the L5-50, 65, and 75 meets the most demanding analytical work.

With the Beckman L-5's you also get a wealth of engineering and applications experience developed through years of research and field contact. And no matter where you are there is a Beckman ultracentrifuge service specialist near you; there are 166 in the U.S. alone.

We'd like to tell you more about the L-5's—the four best ultracentrifuge values in the world. Write for brochure SB-400 to Beckman Instruments, Inc., Spinco Division, 1117 California Avenue, Palo Alto, California 94304.

But a slip of an anonymous *New York Times* typesetter symbolizes even better the discrepancy between promise and performance during the present Administration. In the *Times* edition of 29 January 1973, a tiny box on page 1 announced a sweeping new federal science support program, details of which were to be found on an inside page. This just happened to be the obituary page. I wondered then whether this entertaining slip was Freudian or sibyllic.

In view of subsequent government steps, characterized recently by the Federated Societies of Experimental Biology as "preparing the funeral march of the National Institutes of Health," I should have been alarmed rather than amused.

GEORGE MARGOLIS

## Birth Order, Family Size, and Intelligence

The relation of birth order and family size to intelligence reported in the article by Belmont and Marolla (14 Dec. 1973, p. 1096) is remarkably similar to my observations in a study of almost 800,000 National Merit scholarship participants (1). However, whereas Belmont and Marolla determined the relation by means of a nonverbal test (Raven Progressive Matrices), my own study indicated that the effects were probably verbal in origin. Since the data used by Belmont and Marolla also contain language scores, I hope that the relation of this variable to the nonverbal scores will also be studied.

Belmont and Marolla note that the mean score for only children does not follow a family size gradient. I have also observed this phenomenon (2), but I have found no adequate explanation for it. That is, if scores tend to decline with both birth order and family size, why doesn't an only child follow this same rule and thus have the highest mean score of all?

## Occam's Razor and the Watergate Tapes

In his report "Watergate tapes: Critics question main conclusions of expert panel" (News and Comment, 22 Feb., p. 732), Nicholas Wade adds his contribution to the tape decoy that has been distracting our attention toward what constitutes consciously manipulable and easily distortable "evidence" ever since Alexander Butterfield accidentally (?) revealed the presence of the tapes last July. Wade apparently supports President Nixon's public relations and legal defense staffs in their allegation that the technical experts appointed by Judge Sirica and the White House (!) may have overlooked the possibility of technical failure in the Uher 5000 recorder.

But, if we accept this "explanation" of the 18½-minute silence on that tape, then we must formulate separate explanations for each of two already missing tapes, for any tapes or tape segments that turn out to be missing or rerecorded in the future, for missing dictaphone recordings, for portions excised from documents, for missing CIA records, and so forth.

As scientists who believe with William of Occam that "entities must not be multiplied without necessity," should we not seek a more direct and elegant explanation? There are two, both formulable in terms of "sinister forces." One posits mysterious spirit beings whose actions are beyond our understanding. The other points toward self-serving human beings whose actions would be defined as "cover-up to the third power" (a cover-up of a cover-up of a cover-up).

University of Wisconsin, Milwaukee*

## Conserving Renewable Resources

Colin W. Clark (17 Aug. 1973, p. 630) presents an elucidating and useful model of how a resource with a regenerative capacity may be overexploited. He uses the Antarctic blue whale population as an example.

Regrettably, a quick reader may get the impression that Clark presents a strong mathematical argument in favor of the view that only through socialism would the world be able to avoid catastrophic overexploitation of its natural resources. The postulate of Clark's

# The Polytron® homogenizer.

**BACK IN STOCK!**

**If it can be done, we can probably do it.**

The Willems Polytron® homogenizer is unlike any mixer you've ever used. It works on a unique principle—kinetic plus ultrasonic energy. And it often succeeds where other instruments fail.

Homogenization by sound waves means that tissues are broken down quickly to sub-cellular level without destruction of enzyme activity. You'd be hard-pressed to do that with other kinds of mixers.

In the applications field, the Polytron has proved so effective in inducing physical and chemical change that it has already revolutionized many procedures. Whether it be for dispersing, homogenizing, emulsifying or disrupting, a Polytron is available in the size to meet your specific requirements.

Contact us if you have any questions. Both literature and a demonstration are available on request.

subtitle, that depletion may result from high discount rates used by private exploiters, is unjustified. His model gives the same result irrespective of whether there is one or several private or non-private exploiters, provided they have the highest capital value of future net profits as their objective. To my knowledge this is the objective of most fishing fleets—whether they are operated by state agencies in socialist states or not.

However, extinction does not necessarily follow in the cases indicated in Clark's model, if the cost function is refined slightly. A major cost component in fishing whales with modern vessels is the capital cost of the vessels. This cost depends on the rate of interest (the discount rate), the depreciation time, and the initial investment. These dependencies all counteract the effect that interest and time have on the capital value of the revenue. Thus, for instance, since whale catching and factory vessels have little value without whales, extinction of the whale population would mean that depreciation of these costly vessels would occur at the same time; therefore, a quick extinction strategy may imply a drastic increase in harvesting costs, which, in particular, is important when investment decisions are made. If these capital variables are included in the harvest cost function, extinction does not, when catching is at all profitable, generally follow as the optimal strategy for the catcher, whose sole goal is the highest capital value of net profits in the future.

JÖRGEN CHRISTENSEN  
*Pipersgaten 3B, Stockholm K, Sweden*

Clark argues that overharvesting a renewable resource leads to reduction or possibly to destruction of the supply. But, despite his application of the principle of discounted cash flow, I do not agree with his conclusion that overfishing results particularly from the operation of private (capitalist) forces.

Discounted cash flow is at best only a convenient means for expressing the time-dependent relationship among alternative uses of resources. Any operator, private or public, who has a large investment in facilities geared to a highly specialized operation and not easily translated into other channels of use, will tend to operate those facilities until the return from them approaches the direct cost of operation.

The public operator is even more likely than the private to continue beyond this point for a variety of reasons,

including administrative inertia and the need to avoid labor redundancy. Further, because of his politically convenient accounting practices, it is unlikely that the public operator will really know when he is no longer covering his direct costs. Operators, public or private, when faced with a declining resource, are unlikely to view their immediate problem through the remote concept of discounted cash flow.

The foregoing has no bearing on the ethical or long-range economic desirability of striving for an international agreement to avoid the destruction or severe depletion of the blue whale. But such an agreement must stand on its own merit and, to be effective, must limit public operators as well as private.

J. V. WHIPP

*C. F. Braun & Co., Ltd.,  
Alhambra, California 91802*

Both Christensen and Whipp make the valid point that the effect of discount rates is independent of the social form of management. Forests provide another example of a slow-growing resource for which the sustainable yield is highly sensitive to the rate of discount used by planners—public or private (1). Perhaps my article did not sufficiently stress the need to consider this effect critically. Many economists would agree that, in an imperfect world, social and private discount rates may differ significantly (2).

Christensen also makes a useful observation regarding capital costs. I am open to suggestion as how best to incorporate these costs into the mathematical model.

Another important phenomenon for the economics of whaling is the presence of several distinct species which are harvested in the same location. This situation is analogous to the two-prey, one-predator systems studied by ecologists. In such systems it may happen that the more productive prey species "supports" the predator population at a level high enough to eliminate the other prey species. I have argued elsewhere (3) that Antarctic whaling is perhaps subject to this effect.

## FINNPIPETTE

The best micropipetting system in the world. Accurate. The least expensive. Has variable volume. Four instruments cover a range from 5  $\mu$ l to 5000  $\mu$ l. Excellent reproducibility. Costs only \$78.50 per unit or \$70.00 when four or more are ordered. (Prices FOB Wilmington, Mass.) Prices for Canada on request. Each unit has a micrometer scale giving a minimum of 45 and (depending on unit size) up to 160 possible settings. Thus, one FinnpiPETTE is equal to at least 45 fixed volume pipettes. Each unit (except for 1000  $\mu$ l to 5000  $\mu$ l) takes most standard tips.

## TWO LIQUID SCINTILLATION COCKTAILS

From  
**Amersham/Searle**

**PCS™ The complete aqueous cocktail**  
**NCS™ The complete tissue cocktail\***

PCS is designed for aqueous inorganic and organic samples. Generally it will hold more water and count with higher efficiency than the cocktail you are currently using. PCS contains all necessary ingredients, including fluors. In most cases, you just add the radioactive sample to the counting vial with 10 ml or more of PCS, shake vigorously, and count.

NCS is designed for solubilizing complex biological materials in toluene cocktails. Tests with NCS on whole tissue, blood, and plasma show higher figures of merit (counting efficiency times sample weight) than other digestion reagents or procedures. NCS is the strongest (0.6N) solubilizer for liquid scintillation counting.

Contact our technical service department for detailed information.

## End of the Oil Embargo

The United States has completed successfully the first phase of an adjustment to drastic changes in the cost and availability of petroleum. Statistics\* covering inventories and consumption of oil and its products show that the oil embargo failed to cut supplies to a danger point. Indeed, the end of the embargo found the United States with total inventories 6 percent above those of a year ago.

Consumption of petroleum in the United States follows a cyclical pattern. During the summer, the use of gasoline is at a peak and consumption of heating oil is at a minimum. During the winter months, the opposite is true, but because of sharply enhanced consumption of heating oil, the net effect is that the months of maximum demand are December through March. In that period, consumption usually reaches a peak that is 14 to 17 percent above summer lows.

The petroleum industry builds up inventories during the summer and draws on them in the heating season. In typical recent years, total stocks have dropped from roughly 800 million barrels† to roughly 700 million barrels during the winter months.

The year 1973 was not a typical one for the oil industry. Even before the embargo, stocks were unusually small, whereas demand was sharply greater. For comparison, in early October 1970, total inventories were 777 million barrels, whereas demand was less than 14 million barrels per day. In 1973 at the corresponding time, total inventories were 743 million barrels, with demand at 17 million barrels per day. Much of the inventories is not available because it is tied up in filling pipelines, in tankers, or in process; the contrast between the 2 years is more profound than the figures show.

As suppliers of a vital commodity, the international oil companies have a responsibility to provide dependable supplies and to maintain a sufficient inventory to meet contingencies, but the companies had failed to build adequate reserves in this country. Thus the Arab embargo was applied at a time when it could have maximum effect. It came when the ratio of inventory to demand was unusually low and just before the heavy consumption of the heating season.

When the embargo was announced, consumption was at a rate about 9 percent above that of the previous year. Had normal patterns been allowed to persist, the United States would have experienced disruptive shortages. The country was spared extreme hardship by reason of a fortunate combination of factors: (i) for the first 2 months after its start, the embargo leaked substantially; (ii) the public responded well to pleas for conservation—only toward the end of the embargo did part of the people press the panic button over gasoline shortages; (iii) the weather was milder than average; and (iv) after a long period of fumbling, the federal government finally chose an effective energy czar, William Simon. His program has produced annoyance and criticism, but it has worked. During the crucial months of January and February, when the embargo was fully effective, total inventories dropped from 759 to 710 million barrels; the usual seasonal decrease is 60 to 70 million barrels. Gasoline stocks rose about 9 percent, which is about the usual increase during that period.

In summary, the embargo was ineffective. The United States discovered that it could live with a 15 percent curtailment in consumption without great hardship. With the advent of spring and a resumption of large-scale oil imports, the public will resume some of its energy-consuming habits. But we have shared a dramatic experience, and life will not be quite the same again.—PHILIP H. ABELSON

# Do the Reichert Zetopan Microscope and Automatic Camera come as a set? Or can I buy and use them independently?

Yes.

Bought separately or together, this one-tuosome offers unique capability and outstanding performance.

The Zetopan is an advanced research microscope that can be extended to cover fluorescence, polarization, microphotometry and phase techniques, and can be used with transmitted, incident, epi or Nomarski interference.

The Automatic Camera is adaptable to any microscope in your lab, and is the only camera with direct exposure readout. Built-in factor keys allow you to compensate the measured exposed time for film reciprocity failure. Light measurement may be detailed to one small spot or over the entire frame. Interchangeable 35 mm film magazines.

For a convincing demonstration of the microscope and/or camera write: American Optical Corporation, Reichert Products, Buffalo, New York 14215.

# A verbal montage of the state of science in the 70's

"Science is a constantly changing series of approximations," a scientist-philosopher pointed out.

Thus, each of the 36 interviews between scientists and journalists is a snapshot of a particular science at a particular time. But, summed up, these interviews offer a verbal montage of the state of science in the early seventies: progress in genetics, the difficulties of finding technological answers to natural disasters such as earthquakes, volcanoes, and hurricanes; the pulsating need to explore the worlds beyond—Mars, cosmic puzzles such as pulsars, the oceans. We continue to probe ourselves—the basis of our violent behavior, our evolution, the nurturing of our young . . .

Each of these interviews—like fragments of a jigsaw puzzle—tells little. Assembled, they give a panorama of science that is revealing of its depth, its breadth, and its dynamic state.

## Pharmacia Peristaltic Pump P-3

A cassette pump electronically  
controlled for constant  
liquid flows in  
chromatography  
and gradient  
formation

### You can

- obtain three different flow rates at the same time through the three individually tensioned pumping channels
- change tubes in seconds with the snap-in cassette
- forget about pulsation thanks to the large driven rollers
- rely on a constant motor speed, electronically compensated for load and temperature
- use any flow rate between 0.6 and 400 ml/h per channel with the same gear box
- reverse the flow instantly
- push for maximum flow and clear pump lines rapidly

## The Brush 481. An 8-channel recorder with built in signal conditioners.

The Brush 481 is ideal for a wide range of scientific and industrial applications.

It has our exclusive pressurized ink writing system for crisp, clear traces, built in signal conditioners, an assured 99.5% linearity, 12 pushbutton chart speeds, and a whole lot more. It comes in rack mounting or portable models with accessories to fit your needs.

Let us tell you more. Write Gould Inc., Instrument Systems Division, 3631 Perkins Avenue, Cleveland, Ohio 44114. Or Kouterveldstraat Z/N, B 1920 Diegem, Belgium.

## 1974 Heath/Schlumberger electronic instruments catalog.

The new '74 Heath/Schlumberger instruments catalog is here ...32 pages of high performance electronic equipment at low, direct-to-you prices. Whatever you need in test and measurement equipment for design, R&D, or teaching applications, Heath/Schlumberger has it...at much less than you planned to spend.

Our new  
SR-255B  
strip chart  
recorder  
(left) is a  
good  
example.

Four calibrated spans, 10 mV-10 V, ten accurate chart speeds from 10 in/min to 0.01 in/min. Complete remote control capability, 10 in/sec writing speed...all for just \$335\*. 600 MHz frequency counter for just \$795\*...110 MHz autoranging counter, just \$325\*...dual trace 15 MHz scope only \$595\*...the famous Malmstadt-Enke Lab Stations...power supplies...generators...digital multimeters ...and dozens of other high performance, low cost instruments. To get your FREE copy of this catalog, visit your local Heathkit Electronic Center or use the coupon below.

## RIA's are so much easier and accurate with a Brinkmann Dilutor.

RIA sample processing becomes a simple matter with the Brinkmann Digital Dilutor; it mixes sample and reagent additively, precisely and automatically at the touch of a button. Outstanding accuracy and reproducibility is made possible by an electronic digital volume setting system combined with two precision cylinder and piston assemblies, each having only 2 moving parts.

Liquids contact only glass and PTFE components. Operating range is 1.0 to 5,000  $\mu$ l for reagent, adjustable in steps of 1.0  $\mu$ l.

Choice of two sample ranges: 0.1 to 500  $\mu$ l, adjustable in steps of 0.1  $\mu$ l (Model I), or 1.0 to 5,000  $\mu$ l, in steps of 1.0  $\mu$ l (Model II). For literature write: Brinkmann Instruments, Cantiague Road, Westbury, New York 11590.

In Canada: Brinkmann Instruments (Canada) Ltd., 50 Galaxy Blvd., Rexdale (Toronto), Ont.

...one  
resource  
you can't  
use up.

## Chemical Information

We are reminded daily that unless we work to conserve our resources we'll soon use them up. At Chemical Abstracts Service (CAS), we supply a resource that you can't use up—chemical information.

The CAS Information System produces printed, microform and computer-readable files by combining three elements into a variety of chemical information services: ABSTRACTS—to describe the documents that report the world's chemical research. INDEXES—exhaustive and comprehensive, with a variety of starting points such as subject matter, author names and molecular formulas. BIBLIOGRAPHIC CITATIONS—complete and accurate, to direct you to the original publication.

## WARD'S...AN UP-TO-DATE, "OLD FASHIONED" COMPANY

When Henry Ward published this catalog in 1866, people trusted Ward's for quality scientific educational products—and they still do.

That's because they can rely on the very latest technology to assure them of quality materials and prompt delivery, and "old-fashioned" personal attention when it comes to service.

Over the years, we've supplied hundreds of thousands of high quality Biology, Chemistry and Geology materials.

Even though we're growing by leaps and bounds, and adding new specimens constantly, Ward's policy of "old-fashioned" quality and service is what keeps all of our customers—satisfied customers.

If you don't have Ward's 1974-75 Catalog, send for your free copy today. If you already have one, why not take a few minutes to browse through Ward's world of specimens—and you'll understand why we're still first after 111 years.

### Measuring Microscopes

The series UFM includes monocular and binocular models that have the ability to make measurements of length, width, and depth. Measurements may be made in English or metric units. The microscopes are equipped with large flat-fields. They have a special 3× objective and a wide-field 10× ocular standard with accessory 5× and 40× objectives optional. Illumination systems are built in to provide vertical lighting for opaque objects, transmitted light, and incident oblique illumination. Also available are a high-intensity quartz-iodide illuminator and projection screen, attachments for photomicrography, and other accessories. Unitron Instrument Company. Circle No. 130 on Readers' Service Card.

### Teflon Programmed Sampling Pump

A nonreactive Teflon, gas-sampling pump has been equipped with a programmable 7-day, 24-hour timer. The device may be set to draw samples of selected duration of 15 minutes or more at designated times and frequencies. Only reinforced Teflon comes in contact with the sample. The pump is reliable at pressures from those at sea level to 2 millibars and develops suction which is adjustable up to 3 inches of mercury. The samples are taken at a flow rate of about 150 milliliters per minute which is constant to within  $\pm 1.5$  percent of mean value. The unit weighs less than 7 pounds and operates on standard electric current. Science Pump Corporation. Circle No. 134 on Readers' Service Card.

### Rotated Cells for Coulometry

Model C2000 ElectRoCell performs an analysis in 10 minutes including aliquoting, sparging, and electrolysis. The rotated mercury and platinum cells

offer large ratio of electrode surface to sample volume. Outgassing is rapid; oxygen may be removed from the sample in as little as 20 seconds. The ElectRoCell may be controlled manually or automatically. The device has applications in coulometry, anodic stripping voltammetry, and polarography. The rotated mercury cell is standard and the platinum cell is optional. McKee-Pedersen Instruments. Circle No. 131 on Readers' Service Card.

### Light Guides for Lasers

An articulated light guide is available for attachment to lasers. It consists of modular mirror holders and rotating tubes and provides a flexible pathway for directing laser light and optical viewing fields. The optical axis of the assembly corresponds to the axis of rotation to maintain the light beam in the center of the guide system. Length and bore of the units are optional. Standard mirrors are front-surface, multiple-layer mirrors with high reflectivity at specified wavelengths. Space Sciences Division, Whittaker Corporation. Circle No. 132 on Readers' Service Card.

### Contact Angle Analyzer

Studies of surface properties such as surface treatment, roughness, effect of additives, printability, and adhesion are facilitated with a new contact angle analyzer. The model includes a drop generator that controls drop size with high precision. The device is a tabletop projector with wide-angle optics. A tungsten-halogen light source is equipped with a dichroic filter to remove heat. The image of the liquid drop in contact with the surface studied is projected at 40× on a frosted screen that has a protractor scale and etched horizontal and vertical scales. Imass, Incorporated. Circle No. 133 on Readers' Service Card.

### Optical Emission Spectrometer

The model 310 optical emission spectrometer rapidly analyzes ferrous or nonferrous alloys and reads directly in percent concentration. Model 310 employs cylindrical mirrors to sample discharge for all wavelengths. The focal length is 1.5 meters and the capacity is up to 60 photomultiplier tubes. The available spectral range is from 1900 to 9000 angstrom units. The standard readout is on a cathode-ray tube console in digital form. Options include a teletypewriter printout and interfacing and fully computerized operation. Lab-test Equipment Company. Circle No. 135 on Readers' Service Card.

### Literature

*Aminco Laboratory News* (spring 1974 issue) features studies of applications and uses of the company's products on site and new product descriptions. American Instrument Company. Circle No. 136 on Readers' Service Card.

*Pharmacia Systems for Column Chromatography* illustrates modular systems for chemical analysis including the chromatograph, columns, flow adapters, valves, connectors reservoirs, mixers and pumps. Pharmacia Fine Chemicals. Circle No. 141 on Readers' Service Card.

*Fourier Transform Analyzers (SAI-470)* lists features, concepts, principles of operation and specifications of this signal analyzing device. Signal Analysis Operation, Test Instrument Division, Honeywell, Incorporated. Circle No. 143 on Readers' Service Card.

*ABEM Geophysical Instruments* is a short catalog for mining, hydro, civil engineering, and exploitation geophysics including seismic apparatus. Atlas Copco ABEM AB. Circle No. 140 on Readers' Service Card.

*FMI Lab Pumps* describes a line of valveless, variable, and reversible pumps for handling solutions, suspensions, slurries, and gases in the laboratory. Fluid Metering, Incorporated. Circle No. 144 on Readers' Service Card.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and government organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by *Science* or AAAS is not implied. Additional information may be obtained from the manufacturers or suppliers named by circling the appropriate number on the Readers' Service Card (see pages 122A and 186C) and placing it in the mailbox. Postage is free.—RICHARD G. SOMMER

## Speed Servo® II recorders: fastest track on the car!

With a response faster than 0.3 seconds full scale, our Speed Servo II recorders are making tracks while others are still warming up. And they endure continuous running because of their linear servo motor (one moving part) and conductive plastic feedback pot. Inkless or disposable ink writing. Ten-inch single channel, two-channel crossover, or two-channel parallel. Wide choice of chart speeds, inch or metric. Many case styles and panel options. Check bulletin F 700 for their universal track records. P.O. Box 24000, Indianapolis, Indiana 46224. Tel. 317/244-7611.

## we deliver

## Tell us what you need . . .

We began synthesizing Carbon-13 compounds for you over fifteen years ago, when they were rare laboratory curiosities. You are now able to choose from our list of nearly one hundred compounds—and we actually make and deliver them. They represent the greatest variety of structural types available anywhere. If we don't list your compound we likely can custom synthesize it for you.

Ask for product information on our Carbon-13 compounds.

## GOLDEN RETRIEVER PUP

# The small time fraction collector.

It's also a small drop counting fraction collector. In fact, it's one of the smallest fraction collectors available. And it has a price to match: \$595.00, complete.

95 test tubes 12 or 13 mm diameter are held in 19 removable racks, each with a rotating shoe to allow it to stand upright when removed from the instrument. The Pup will retrieve from 1 to 2 columns and can be programmed for timed interval, drop counting, or volumetric collection. For cleaning after spills, the entire shifting mechanism can be easily removed and submerged. An automatic shut-off and an optional column support mast help make the Golden Retriever Pup one of the best values for your lab.

ISCO has other circular and linear collectors, absorbance monitors, pumps, and more instruments for column chromatography and other kinds of biochemical research. For more information, write for our current catalog.

## BOOKS RECEIVED

(Continued from page 153)

Viking, New York, 1973. xii, 296 pp., illus. \$8.95.

**Noise and Man.** William Burns. Lippincott, Philadelphia, ed. 2, 1973. xii, 460 pp., illus. \$20.

**Nonlinear Almost Periodic Oscillations.** M. A. Krasnosel'skii, V. Sh. Burd, and Yu. S. Kolesov. Translated from the Russian edition (Moscow, 1970) by A. Libin. Halsted (Wiley), New York, 1973. x, 326 pp. \$36.

**Nuclear Physics.** M. G. Bowler. Pergamon, New York, 1973. xii, 420 pp., illus. \$18. International Series of Monographs in Natural Philosophy, vol. 53.

**Organic Reactions.** Vol. 20. William G. Dauben and nine others, Eds. Wiley, New York, 1973. xii, 494 pp., illus. \$22.50.

**Otophysiology.** Proceedings of a symposium, Ann Arbor, Mich., May 1971. Joseph E. Hawkins, Jr., Merle Lawrence, and Walter P. Work, Eds. Karger, Basel, 1973 (U.S. distributor, Phiebig, White Plains, N.Y.). vi, 542 pp., illus. \$76.35. Advances in Oto-Rhino-Laryngology, vol. 20.

**Patterns of Personality Judgment.** Rudolf Cohen. Translated from the German edition (Bern, 1969) by Dirk L. Schaeffer. Academic Press, New York, 1973. x, 366 pp. \$20.

**Pharmacology and the Future of Man.** Proceedings of a congress, San Francisco, July 1972. G. H. Acheson, Ed. Karger, Basel, 1973 (U.S. distributor, Phiebig, White Plains, N.Y.). Five vols., illus. Vol. 1, Drug Abuse and Contraception. xviii, 300 pp. \$29. Vol. 2, Toxicological Problems, xviii, 242 pp. \$23.75. Vol. 3, Problems of Therapy. xviii, 508 pp. \$46.50. Vol. 4, Brain, Nerves, and Synapses. xviii, 484 pp. \$43.75. Vol. 5, Cellular Mechanisms. xviii, 452 pp. \$41.75. The set, \$143.

**Photographic Sensitivity.** Proceedings of a symposium, Cambridge, England, Sept. 1972. R. J. Cox, Ed. Published for the Scientific and Technical Group of the Royal Photographic Society by Academic Press, New York, 1973. xvi, 410 pp., illus. \$23.

**Photographic Techniques in Scientific Research.** Vol. 1. J. Cruise and A. Newman, Eds. Academic Press, New York, 1973. x, 350 pp., illus. \$21.50.

**Physical Principles and Techniques of Protein Chemistry.** Part C. Sydney J. Leach, Ed. Academic Press, New York, 1973. xiv, 622 pp., illus. \$44. Molecular Biology Series.

**Physics and Chemistry of Ice.** Papers of a symposium, Ottawa, Canada, Aug. 1972. E. Whalley, S. J. Jones, and L. W. Gold, Eds. Royal Society of Canada, Ottawa, 1973. xiv, 404 pp., illus. \$30.

**Placebo Therapy.** A Practical Guide to Social Influence in Psychotherapy. Jefferson M. Fish. Jossey-Bass, San Francisco, 1974. xii, 164 pp. \$8.75. The Jossey-Bass Behavioral Science Series.

**Planning for Man and Nature in National Parks.** Reconciling Perpetuation and Use. Richard R. Forster. International Union for Conservation of Nature and Natural Resources. Morges, Switzerland,

1973. 86 pp., illus. Paper. IUCN Publications new series, No. 26.

**Progress in Polymer Science.** Japan. Vol. 6. S. Onogi and K. Uno, Eds. Kodansha, Tokyo, and Halsted (Wiley), New York, 1973. x, 302 pp., illus. \$19.50.

**Radioactive Isotopes in Biological Research.** William R. Hendee. Wiley-Interscience, New York, 1973. xviii, 356 pp., illus. \$14.95.

**Radioecology.** V. M. Klechkovskii, G. G. Polikarpov, and R. M. Aleksakhin, Eds. Translated from the Russian edition (Moscow, 1971) by N. Kaner and H. Mills. Halsted (Wiley), New York, 1973. xii, 372 pp., illus. \$35.

**Raw Material Supply in a Multipolar World.** Yuan-li Wu. Crane, Russak, New York, 1973. xiv, 56 pp., illus. \$4.95.

**Representative Government and Environmental Management.** Edwin T. Haebele. Published for Resources for the Future by Johns Hopkins University Press, Baltimore, 1974. xiv, 188 pp., illus. \$8.95.

**Residue Reviews.** Residues of Pesticides and Other Contaminants in the Total Environment. Vol. 49. Francis A. Gunther and Jane Davies Gunther, Eds. Springer-Verlag, New York, 1973. viii, 158 pp., illus. \$14.80.

**Responses of Fish to Environmental Changes.** Walter Chavin, Ed. Thomas, Springfield, Ill., 1973. x, 460 pp., illus. \$19.75.

**The Salmon.** Their Fight for Survival. Anthony Netboy. Houghton Mifflin, Boston, 1974. xxii, 614 pp., illus. + plates. \$15.

**Schooling in the Ecology of Fish.** D. V. Radokov. Translated from the Russian edition (Moscow, 1972) by H. Mills. Halsted (Wiley), New York, 1973. viii, 174 pp., illus. \$19.75.

**The Science of Design.** Gordon L. Glegg. Cambridge University Press, New York, 1973. viii, 94 pp., illus. \$5.75.

**Solid/Solid Interfaces.** The Faraday Division, Chemical Society, London, 1973. 230 pp., illus. + plates. Paper, £5. Faraday Special Discussions of the Chemical Society, No. 2.

**Solid Waste Management.** D. Joseph Hagerty, Joseph L. Pavoni, and John E. Heer, Jr. Van Nostrand Reinhold, New York, 1973. xiv, 302 pp., illus. \$16.95. Van Nostrand Reinhold Environmental Engineering Series.

**Le Solide Cristallin.** Robert Collongues. Presses Universitaires de France, Paris, 1973. 224 pp., illus. Paper, 30 F. Collection sur le chimiste.

**Spatial Structures.** Introducing the Study of Spatial Systems in Human Geography. R. J. Johnston. St. Martin's, New York, 1973. x, 138 pp., illus. \$6.95. The Field of Geography.

**Stereochemistry and Bonding in Inorganic Chemistry.** J. E. Fergusson. Prentice-Hall, Englewood Cliffs, N.J., 1974. x, 310 pp., illus. \$15.95. Prentice-Hall International Series in Chemistry.

**Synthetic Procedures in Nucleic Acid Chemistry.** Vol. 2, Physical and Physicochemical Aids in Characterization and in Determination of Structure. W. Werner Zorbach and R. Stuart Tipson, Eds. Wiley-Interscience, New York, 1973. xii, 674 pp., illus. \$35.
