Environmental Awareness

Elements of Marine Ecology

By

R. V. Tait and R. S. De Santo

This core text for marine ecology courses is unique in that it is a combination textbook and workbook of field problems, as well as a curriculum plan. Unlike previous marine ecology texts, it emphasizes both physical and biological concepts, fisheries, and shallow and deep-water oceanology, rather than deep-ocean oceanography.

Environmental Physiology of Marine Animals

By

W. B. Vernberg and F. J. Vernberg

"The purpose in writing this book was to bring together in a text for college and graduate students the main concepts encountered in the physiology of the marine environment. The result is a concise, readable attempt to describe the functional responses of marine animals to alterations in the environment. . . . The text is usefully illustrated with numerous clear figures, tables and diagrams. It presents much information . . . which cannot fail to be valuable to anyone studying physiological responses in marine creatures. . . ."

Microbial Ecology

An International Journal

Editor-in-chief
Ralph Mitchell

Microbial Ecology is an international journal which accepts papers in those branches of ecology in which microorganisms are involved. Articles describing significant advances in the microbiology of natural ecosystems will be considered as well as those describing new methodology. In addition, the journal accepts reports concerned with microbiologic processes associated with environmental pollution. Papers dealing with the ecology of all microorganisms, including prokaryotes, eukaryotes, and viruses will be published.

Marine Biology

International Journal on Life in Oceans and Coastal Waters

Editor-in-chief
O. Kinne

This journal publishes original research papers concerned with marine life, such as those dealing with the metabolism of organisms, the interdependence of micro and macroorganisms, and alterations brought about by environmental changes. Studies on the physical, chemical, and geologic aspects of oceanography relevant to marine biology are also included. The journal serves throughout the world as a vehicle for information exchange for researchers in marine biology.

Undercover Security...

Nalgene® Laboratory Notebooks

In this hard-cover, permanently case-bound notebook your notes and data get optimum protection. Black cover and 108 pages (9¼" x 11¼") are 100% spunbonded polyethylene—waterproof, chemical- and tear-resistant, won't rot or mildew. Printed with a fine green grid, with spaces for dates, signature and witnessing, Cat. No. 6300 will accept ball point writing.

Also available, new notebooks with brown polyethylene covers and conventional (not waterproof) paper pages. Cat. No. 6301 has same format as No. 6300, providing an economical yet professional lab notebook. Duplex, Cat. No. 6302, has 50 numbered sets (100 sheets) printed one side only with identically numbered duplicate pages perforated for easy removal. Excellent for situations where duplicate notes are required.

You can also get practically indestructible PolyPaper™ (coated polyethylene), unprinted 8½" x 11" sheets, Cat. No. 6304. Unaffected by salt or fresh water, resist ultraviolet light, tearing, fraying, curling, aging, discoloration, rot or mildew, remain flexible at cold temperatures. Write with an ordinary pencil—even underwater. Will accept printing, typing, ball point pen and grease pencil.

PolyPaper™ labels, Cat. No. 6309, available in four convenient sizes, are unaffected by environments that would destroy ordinary labels. Special pressure-sensitive adhesive sticks well to plastics, glass and metal.

Order from your Lab Supply Dealer. For more details and a free sample of PolyPaper™, write to Dept. 4117B, Nalgene Labware Division, Rochester, N.Y. 14602.

Our compact MM-33 micromanipulator drives by hand or motorized 'joy stick'.

Ideal for working at magnifications up to 250X, the MM-33 provides coarse movements in 3 planes (XYZ) plus fine movement in the thrust axis. Excursions calibrated in millimeters with vernier readings to 0.1 mm; final drive calibrated to 10 microns. Ball-bearing raceways assure smooth, backlash-free operation. All controls aligned in same vertical plane permits use of several MM-33's side by side. Mounts on Flexbar or a variety of bases.

Also available in a motorized version (MM-33M), with 'Joy Stick' remote unit for vibration-free control of speed and direction. For literature, write: Brinkmann Instruments, Cantiague Rd., Westbury, N.Y. 11590.

New analytical PAGE for fast, low-cost separations with small sample volumes

Polyacrylamide Gel Electrophoresis is widely recognized as an extremely valuable high-resolution technique for fast separation of complex proteins, sera, tissue extracts, etc. The new Shandon analytical PAGE Mark II accommodates 12 tubes for the lowest cost-per-sample capacity. Great flexibility with accessories, too:

Photopol Lamp for photopolymerization, a low-cost **Iso-electric Focusing Kit** for analysis of proteins, **Transverse Gel Rod Destainer** for rapid destaining. Send for PAGE literature to Shandon Southern Instruments, Inc., 515 Broad Street, Sewickley, PA 15143 (Pittsburgh District).

A Journey Through the Invisible Universe and the World of Radio Astronomy

The Invisible Universe

By **G. L. Verschuur**, University of
Colorado, Boulder, Colorado

With his new book Dr. Verschuur
achieves a rare goal—teaching and
entertaining his readers
simultaneously.

The Invisible Universe is an exciting
account of the story of radio astron-
omy. The author relates in an informal,
non-mathematical way, what radio
astronomy is, what radio astronomers
have discovered out in space, and
what these discoveries mean.

Students, from high school seniors
on, and anyone who has been fascinated
by a visit to a planetarium will enjoy
this text and its profusion of
captivating illustrations.

Galactic and Extra-Galactic Radio Astronomy

Edited by **G. L. Verschuur**
and **K. I. Kellermann**
National Radio Astronomy Observatory,
Green Bank, West Virginia

This book is concerned with the
observational aspects of modern radio
astronomy outside the Solar System.
It begins where most textbooks on
radio astronomy leave off, with a
discussion of what is actually known
from research in the field. Emphasis is
placed on the type of data available
and its interpretation. The book is
aimed at graduate students and
practicing astronomers, but is also
suitable for senior astronomy courses.
