# Don't get caught in a textbook maze.

## **Villee & Dethier: BIOLOGICAL PRINCIPLES AND PROCESSES** *Second Edition*

Now in a revised second edition, this introductory biology text reveals the basic mechanisms of life and the interrelationships of life forms. Designed primarily for full-year courses for science majors, the text can be adapted to shorter courses in biology and introductory zoology. The new edition includes: major reorganization of material on *intermediary metabolism* and the *immune system*; up-dated discussions of *evolution* and *cell membranes*; new material on *mechanisms of hormone actions*; and added information on the *cell cycle* and *eukaryotic protein synthesis*. The book follows a five-kingdom phylogenetic scheme. SI units are used throughout.

By **Claude A. Villee**, Harvard University; and **Vincent G. Dethier**, University of Massachusetts. 999 pp. About 700 ill. (in two colors). Just Ready.

**Order #9029-7.**

## **Harner: STUDY GUIDE FOR BIOLOGICAL PRINCIPLES AND PROCESSES BY VILLEE & DETHIER**

Students using the Villee and Dethier text can make the most of their biological studies by using this detailed guide. For each chapter in the text, it provides a preliminary "conceptual briefing" and a section-by-section selection of review questions. Thought-provoking summary questions and answers to all exercises are also included.

By **W. Holt Harner**, Broward Community College. About 200 pp. Soft cover. Just Ready.

**Order #4532-1.**

## **Norstog & Long: PLANT BIOLOGY**

This compact introductory text stresses the economic and cultural aspects of plants, within the context of an informative evolutionary survey of the plant kingdom. Data on the physiology and ecological significance of botanical species is integrated into chapters on morphology. Botanical jargon and Latin terminology are kept to a minimum. Superbly detailed plates by Priscilla Fawcett of Fairchild Tropical Gardens are included. A **Teacher's Guide** is available.

By **Knut Norstog**, Northern Illinois University; and **Robert W. Long**, University of South Florida. 585 pp. About 360 ill. Just Ready.

**Order #6864-X.**

## **Long & Norstog: PLANT BIOLOGY: A Laboratory Manual for Elementary Botany**

Versatility is the hallmark of this lab manual. Experiments involve a number of different organisms and approaches and the authors outline demonstrations which are instructive, yet easy to set up and run. Although designed as a lab companion to the authors' text, the manual will complement any standard botany text. Appendices include suggested student research projects, lists of needed materials, and a list of equipment vendors. Convenient tear-out answer sheets are provided for all lab exercises and demonstrations.

By **Robert W. Long**, University of South Florida; and **Knut Norstog**, Northern Illinois University. About 240 pp. Illustd. Soft cover. Just Ready.

**Order #5791-5.**

# Select from Saunders Science List.

## McCormick & Thiruvathukal: ELEMENTS OF OCEANOGRAPHY

Readable and highly graphic, this survey text for non-science majors paints a vivid picture of the sea and oceanographic phenomena. The authors discuss the physical, chemical and biological factors that combine to make the ocean a functioning ecological system. Coverage includes *food webs*, *marine ecology*, *human use and abuse of the oceans*, and *tsunamis*. Plate tectonics are central to discussions of ocean geology. An interesting chapter on "political oceanography" touches on international, diplomatic and political issues including marine resources and navigation. Throughout the book, oceanographic discoveries are presented in historical context. An **Instructor's Manual** is available.

By **J. Michael McCormick** and **John V. Thiruvathukal**, both of Montclair State College. 346 pp. About 330 ill. Just Ready.

**Order #5900-4.**

## Orr: VERTEBRATE BIOLOGY *Fourth Edition*

Thoroughly revised, the fourth edition of this intermediate-level text emphasizes the natural history of vertebrates while presenting comprehensive coverage of vertebrate anatomy, physiology, morphology, behavior, systematics, ecology, ethology, and population dynamics. It explores a wider geographic area than ever before including new material from Australia, New Zealand and the Middle East. Coverage now includes a chapter on vertebrate paleontology, a brief review of the lower chordates, a large number of new references, and many new photographs.

By **Robert T. Orr**, California Academy of Sciences, San Francisco. 472 pp. 297 ill. March 1976.

**Order #7018-0.**

## Turner & Bagnara: GENERAL ENDOCRINOLOGY *Sixth Edition*

The leading text for introductory endocrinology courses will soon be available in a revised new edition. Consideration of the mechanisms of hormone action has been expanded. The book includes additional material on hormone assays, especially radioimmunoassays; a new separate chapter on neuroendocrinology; new information on prostaglandins, the role of Vitamin D as a hormone, chalone, nerve growth factor, and pheromones; and many new electron micrographs, line drawings and summary tables.

By **C. Donnell Turner**, formerly of Duquesne Univ.; and **Joseph T. Bagnara**, Univ. of Arizona. About 675 pp., 100 ill. Ready June 1976.

**Order #8933-7.**

## Horn: BIOLOGY OF INSECTS

Written for students in the life and agricultural sciences, this introductory text emphasizes insect function and the importance of insects in relation to man's environment. Illustrated coverage of morphology and taxonomy is also included.

By **David J. Horn**, Ohio State Univ. About 450 pp., 300 ill. Ready Oct. 1976

**Order #4780-4.**

## May: THEORETICAL ECOLOGY: Principles and Applications

Both modern and cohesive, this book provides an introduction to theoretical ecology showing how it can clarify empirical observations and examining its practical applications. Attention is focused on the biological assumptions which go into various models and on the way consequent mathematical behavior of the models explains aspects of population and community dynamics. Designed for courses at the senior/graduate level, the book follows a descriptive rather than a rigorously mathematical approach.

Edited by **Robert M. May**, Princeton Univ., with 10 contributors. About 250 pp. Illustd. Ready Fall 1976.

## Graham & Waering: DEVELOPMENTAL BIOLOGY OF PLANTS AND ANIMALS

Written for advanced courses on the senior/graduate level, this up-to-date text is unique in its balanced treatment of both plant and animal development. Featuring contributions by respected authorities in the field, coverage includes: *the origin of cell heterogeneity*, *determination and pluripotentiality*, *cell interactions*, *hormonal control*, *molecular biology* and *environmental control*. Editorial introductions to each section provide both continuity and perspective.

Edited by **C. F. Graham**, Oxford Univ.; and **P. F. Waering**, Univ. College of Wales. 408 pp. About 200 ill. Ready June 1976.

**Order #4205-5.**

## Christensen: DISSOCIATION, ENZYME KINETICS, BIOENERGETICS—A Learning Program for Students of the Biological and Medical Sciences

This new learning program uses a programmed format to give students a firmer understanding of these important topics in biochemistry. It includes 201 items on dissociation, 78 on kinetics, and 60 on bioenergetics. If your students have encountered difficulties in grasping these basic concepts, this book can prove of immediate value to them.

By **Halvor N. Christensen**, The Univ. of Michigan, Ann Arbor. 185 pp. Illustd. Soft cover. \$6.75. Sept. 1975.

**Order #2580-0.**

## COVER

Bow of the *Ivory Star* in Halifax, Nova Scotia, 11 July 1974, after her collision with a "growler" in the Gulf of St. Lawrence. The 612-foot-long vessel displaces 16,320 tons (8,964 tons net) and was carrying 700,000 bushels of grain. A human stands in the lower right of the hole. See page 7. [Wamboldt-Waterfield Photography Ltd., Halifax, Nova Scotia]

# FOOD

**When abundant, it is wasted or treated as a commodity.**

**When scarce, its distribution is a matter of life or death.**

During the past few years, serious shortfalls in world food production and distribution, along with soaring agricultural prices, have posed some vital questions:

Will population growth and rising affluence exceed the world's capacity to feed itself?

Will we run out of land, water, energy?

Can applications of new agricultural technology continue to increase essential supplies?

These complex problems—and some solutions—are dealt with in an important new compendium:

## ***FOOD: Politics, Economics, Nutrition, and Research***

*Edited and with an introduction by Philip H. Abelson*

*FOOD: Politics, Economics, Nutrition, and Research*, the third in a special SCIENCE Compendium Series, contains articles by 50 of the most knowledgeable scholars in the field and provides a close look at the “why” of the world food situation—from the influence of politics and economics, through the complex issues of application of technological advances and the dependency on nonrenewable resources of high-technology agriculture.

Provocative reading for everyone—layman or professional—concerned with today's—and tomorrow's—food supply.

“... one of the most sensitive and accurate publications on food in recent years . . . [it shows] how serious are the fallacies behind some of the food myths we accept daily as fact.”—Nick Eberstadt, *The New York Review of Books* (19 February 1976).

# Digital can make your labwork easier by making your lab work harder.

Digital can help make your job easier by making your lab more efficient. No matter whether you're doing experiment monitoring and control. Materials testing. Or spectral analysis.

We offer a complete range of lab hardware. Backed by our Laboratory Applications software. And DECnet networking software. In fact, we offer everything you need to get the most out of our systems and your lab.

**For low-cost data acquisition, we offer the PDP-11/04.** It's a small yet sophisticated system for data acquisition and analysis on a tight budget. You can use the 11/04 as a smart communication node. A remote data collector. An intelligent terminal. Or a completely independent data acquisition system. With the 11/04, where and how you use it depends on you.

**We also offer the GT44 graphics system.** The GT44 combines the power and performance of our disk based PDP-11/40 computer system, intelligent display processor and 17" CRT. It gives you a fast, flexible system for all your interactive graphics applications. The GT44

is hardware and software compatible with the complete Digital 11 family. And that means you can simply add on to your system whenever you're ready. You can even use it as a satellite terminal in your lab network.

**For really high speed FORTRAN number crunching, we offer the PDP-11T55.** The 11T55 is designed to give you both fast response time and sophisticated program development. It includes two removable disks with 2.4 megabytes each for off line storage of programs and data. A fast floating point hardware processor. And 300 nanosecond cycle time. The 11T55 is ideal for applications that require fast FORTRAN or assembler execution speed.

**And you can tie everything together with DECnet.**

With DECnet, small systems like our 11/04 can tap the power and memory of larger systems. Larger systems like our 11T55 or

PDP 11/70 can gather data from small computers connected to instruments. Systems can even swap information and share costly storage devices. In short, DECnet gives you the ability to easily design your own network in any configuration you choose. So you could save money by (1) sharing resources and (2) making a system you have work harder.

When you put our cost-effective hardware together with our application and network software, you'll find Digital has a solution to just about any lab application. Even yours.

We'd like to prove it. Just return the coupon below. Digital Equipment Corporation, Marlborough, Mass. 01752, Telephone 617-481-9511, extension 6947. European headquarters: 81 route de l'Aire, 1211 Geneva 26. Tel: 42 79 50. Digital Equipment of Canada, Ltd.

Every company has a phone to take your call. The difference at New England Nuclear is the people you can talk to.

Problem with LSC counting? The staff and facilities of our LSC Applications Laboratory will help. Question on tritium labeling? A chemist in our Tritium Labeling

Department wants to discuss it with you. Want to talk with an expert about steroids, amino acids, carbohydrates, RNA-DNA precursors, lipids, drugs, or any other area in radiochemicals? The experts are here, and they all have telephones.

Responsiveness is one of the reasons people count on us.

## A Century of Chemical Progress

For nearly three decades following its formation in 1848, AAAS provided the principal "home" for the chemists of the United States—first through a Section of Chemistry and Mineralogy and then through a Section A subsection which later became Section C (Chemistry).

When nearly 100 chemists met at Northumberland, Pennsylvania, in 1874 to celebrate the centennial of Joseph Priestley's discovery of oxygen, discussions of a national chemical society took place. The plan fell through at the time, largely because of loyalty to AAAS and the belief of some that there never would be enough chemists in the land to sustain a healthy society. These discussions led, however, to establishment of the American Chemical Society (ACS), with 133 founding members, on 6 April 1876. The society has survived in such good health that this year, as it observes its 100th anniversary, it has attained a membership of more than 110,000. Moreover, throughout its first century, ACS has enjoyed a cooperative and mutually beneficial relationship with AAAS, of which it is an affiliate.

The society's phenomenal growth has paralleled the phenomenal development of American chemistry, which ACS has done much to stimulate. Dedicated to the "advancement of chemistry in all its branches," ACS from the start has made the rapid and wide dissemination of chemical knowledge one of its principal objectives. Its *Proceedings*, first published in 1876, became in 1879 the *Journal of the American Chemical Society*, which still flourishes today as part of a diversified family of journals, magazines, books, and secondary publications—notably *Chemical Abstracts*.

A second way in which ACS has promoted the diffusion of knowledge has been by its elaborate network of scientific meetings. With the aid of 175 local sections, in all parts of the country except Alaska, and 28 technical divisions serving all major fields of chemistry, ACS sponsors two national, ten regional, and more than 1000 local meetings each year.

For many years, ACS has made its members' expertise available to public officials dealing with problems affecting, or affected by, chemistry. More recently, the society's Committee on Chemistry and Public Affairs, supported by a staff department, has made significant contributions in this area. It was partly in recognition of this type of service that Congress conferred a national charter on the society in 1938.

The society also has worked through the years to strengthen the chemical profession itself, by exerting a constructive influence on chemical education and by helping chemists protect and enhance their professional status.

The centennial observance provides an exceptional opportunity to pursue another key ACS objective, that of increasing public understanding of the meaning and importance of the work of chemists and chemical engineers. The largest single centennial project is a traveling exhibit, supported by industry and designed to familiarize the public with the myriad ways in which chemistry improves the quality of everyday life. This exhibit will open in New York on 5 April during the ACS Centennial Meeting and later will visit some 14 other major cities over the next 3 years. A special commemorative stamp honoring the science of chemistry will be introduced at the Centennial Banquet on 6 April. At both the New York meeting and the 1976 fall meeting in San Francisco, technical programs of unequalled quality will be presented, with many outstanding foreign scientists participating. Local sections will hold their own celebrations at various times during the year.

All who have helped plan the centennial celebration hope that the gains made in 1976 in scientific reporting, member participation, public relations, intersociety and international cooperation, and overall professional enthusiasm will be maintained as ACS enters its second century.—GLENN T. SEABORG, *President, American Chemical Society, Washington, D.C. 20036*

# Western Electric Reports:

## Electron beam mask marvel.

Integrated circuits can be seen as the ultimate extension of the art of silk-screening and modern electronics. Using masking techniques which go far beyond those of silk-screen artists, it is possible to generate thousands of electronic components on a tiny chip the size of a matchhead.

But as designers pack more and more components onto these chips, the masks used to generate them must be made with even greater precision. Conventional photographic mask-making techniques are proving too crude to produce such masks economically, severely limiting integrated circuit technology.

But now a Bell System team has made a major advance in the mass production of extremely precise masks. Bell Labs engineers have devised a method of using a beam of electrons to make the masks. And Western Electric engineers have helped design practical production equipment.

The new method is faster, more reliable, more precise and less expensive than existing photographic techniques. Because an electron beam has a shorter equivalent wavelength than light, it is a much sharper stylus. It can be focused to a spot 10 millionths of an inch in diameter.

The electron beam is used to draw an intricate pattern on a chromium-coated glass substrate, covered with a chemical film sensitive to the beam. The chemical film, called a resist, polymerizes or "sets" after exposure to the beam, becoming impervious to the chemicals that will subsequently be used to etch out the mask. The unexposed portions of this film and the underlying chromium are etched away, leaving a negative mask pattern of chromium on glass.

**Benefit:** Electron beam mask-making is one more manufacturing innovation that allows the Bell System to meet your communication needs reliably and economically.

*Blank mask is mounted on movable stage positioned to accuracy of a millionth of an inch. Stage, electron beam and circuit design instructions are computer controlled.*

*Electron beam changes physical characteristics of exposed resist so that, after chemical etching, pattern is left on clear substrate.*

*Finished substrate may contain 10,000 mask patterns. Copies of master masks will be used in actual production.*
