**1000
times
faster
than
auto-
radiography
for beta
imaging**

Within 5 to 30 minutes, the **Birch-over Radiochromatogram Spark Chamber** nondestructively locates and records the distribution of radioactive compounds on electrophoresis gels, paper, or thin layer plate radiochromatograms. With conventional autoradiography, the same process takes from three days to three weeks, with radiochromatogram scanning, from one to six hours. The instrument's camera produces a one-minute Polaroid print similar to an autoradiograph—a true record of radioactivity distribution in alpha, beta, and gamma emitting isotopes. An epidioscope print projection system of fixed magnification transfers the image from the Polaroid print directly back on the original radiochromatogram. An optional feature permits viewing under direct ultraviolet or natural light or by transmitted natural illumination and obtaining a permanent photographic record. Call or write today for complete details.

Texas Instruments SR-52

Programming power from Texas Instruments. Easy hand held programming for scientists, engineers, students—anyone who works with advanced mathematics. Check these features: 224 program locations, 20 addressable memory registers, 23 preprogrammed key functions, indirect addressing, permanent program storage on magnetic cards.

Texas Instruments SR-56

More power from Texas Instruments. Hand held key programmable calculator. 100 program steps, 5 program levels (up to 4 levels of subroutine may be defined). Easy single step editing. Main features include 26 preprogrammed key functions, 10 addressable memory registers, algebraic logic and 9 levels of parentheses.

PC-100 Lock down printer; for a hard copy of your results; step by step listing of programs, or "debugging" programs. The PC-100 printer may be used with the SR-56 or SR-52.

COMMUNICULTURES ...a new way to understand cultural interactions

You can now grow up to four pure and separate cultures in a single mixed culture system. The metabolic products of the cells in each chamber are free to communicate on a molecular level with the cells in the other chambers to influence growth and metabolism. Yet, each individual culture remains homogeneous for meaningful analysis. The Ecologen is a multiple diffusion chamber which simulates the natural environment by permitting interaction of metabolic products. To regulate cultural interaction, the Ecologen can be equipped with controls for pH, dissolved oxygen, temperature and agitation. It is ideal for studies of soils, water, oral cavities, and digestive tracts, and can be used to isolate different metabolites in a cell-free chamber.

FROM NEURON TO BRAIN: A Cellular Approach to the Function of the Nervous System: STEPHEN W. KUFFLER and JOHN G. NICHOLLS. This book offers a coherent approach to the study of the nervous system from the standpoint of cellular mechanisms. It begins with a discussion of the mammalian visual system and proceeds to cover material from specialized signals, morphology and biochemistry of nerve cells, to higher functions of the brain such as perception. Published by Sinauer Associates.

MEDICAL PHARMACOLOGY: Principles and Concepts, 8th edition, by ANDRES GOTH, M.D. Carefully revised and updated, this classic reference covers all aspects of medical pharmacology, with emphasis on current approaches to therapeutic problems. Section I presents general principles such as kinetics, drug metabolism, and drug-receptor interactions. Succeeding sections examine drug effects on the nervous, cardiovascular, respiratory, gastrointestinal and endocrine-reproductive systems. The final sections provide new information on chemotherapy and immunopharmacology. Published by The C. V. Mosby Company, May, 1976. Approx. 672 pp. 583 illus. About \$17.50.

SCIENCE BOOKS AND FILMS: An authoritative guide to science books and films.

Are you among the thousands depending on AAAS *Science Books* as your quick, reliable source for evaluation of the latest science books? If not, join them, and now get even more information with AAAS *Science Books & Films*, the new and expanded quarterly magazine offered by AAAS. In addition to book reviews, you will receive reviews of current science education films produced by commercial firms, universities, and government agencies. Use this single selection tool as your guide for choosing science materials for readers and viewers at all levels, from kindergarten through college.

Price: \$15 for members (\$26 for 2 years), \$16 for nonmembers (\$28 for 2 years).

Sterilization: The Heat's Off

For heat sensitive solutions and media, membrane filtration offers the only effective means of sterilization and particle removal. The Millex® Filter Unit is a 0.22µm or 0.45µm pore size membrane filter sealed in a disposable plastic housing. In research and analytical applications, Millex Filter Units ultraclean and sterilize small volumes.

For further information on the Millex Filter Unit, check the reader service card or call Millipore Corporation toll-free: 800-225-1380.
