

the expertise of less-developed nations in natural methods of purification. A paper from the Sudan describes methods in which local clays or vascular plants are used as flocculants to purify Nile water for drinking purposes.

The chapter by Goldman and Ryther describing their work on waste reclamation through the use of an integrated food chain exemplifies the difficulties inherent in biological control of water pollution. Despite Ryther's wide experience in marine biology, he and his group have had serious technical difficulties to overcome, particularly the concentration of toxic chemicals and enteric viruses in the biota. These constraints are discussed by a number of contributors.

I am impressed by this book. It provides a new perspective on water pollution control. Ultimately we will have to conserve our water and material resources, and the integration of recycling with waste treatment will be a long, uphill struggle. The contributors to this conference are to be commended for facing the challenge.

## Evolutionary Phytochemistry

**Biochemical Interaction between Plants and Insects.** Proceedings of a meeting, Tampa, Fla., Aug. 1975. JAMES W. WALLACE and RICHARD L. MANSELL, Eds. Plenum, New York, 1976. xii, 426 pp. \$35. Recent Advances in Phytochemistry, vol. 10.

This volume will be of particular importance to the field of phytochemistry because of two papers, that of Feeny and that of Rhoades and Cates. Taken together these papers provide a sound evolutionary foundation for the development of testable hypotheses in fields that have been essentially descriptive (phytochemistry) or have been concerned primarily with proximate mechanisms of plant-insect chemical interaction (insect physiology and behavior).

The correspondence between the basic theories outlined in these two papers is remarkable given their conceptually different points of origin and their independent development. Feeny's theory originated from his empirical studies of widely different categories of plant and phytophagous insect. On the basis of observed differences in the kinds of chemical defenses employed by oak trees and

mustard plants and striking differences in the digestive strategies of phytophagous insects, he developed (in *Coevolution of Animals and Plants*, L. E. Gilbert and P. R. Raven, Eds., University of Texas Press, 1975) the basic aspects of the theory that is extended and elaborated in this volume as the theory of plant apparency.

In contrast, many of the empirical data in the paper by Rhoades and Cates were collected to test hypotheses initially developed by Oriens (see Oriens and Cates in *Unifying Concepts in Ecology*, W. H. van Dobben and B. H. Lowe-McConnell, Eds., Junk, 1975). The original predictions were that early-successional plants (because they escape in time and space) would not be toxic and that late-successional plants (because of their predictability to insects) would be toxic. Thus, the prediction was made that insects that feed on early-successional plants would be generalists and those that feed on late-successional plants would be specialists. Except in the case of a few herbivores (for example, banana slugs) empirical data tend to run counter to this prediction. Feeny's dichotomy of qualitative and quantitative defenses helps resolve the false paradox.

It is both reassuring and a tribute to careful selectionist thinking that the same basic theory of plant defensive chemistry would have been developed even had Feeny been a classical phytochemist. Although the theory is undoubtedly simplistic, I share Feeny's optimism that its broad framework is secure, and I believe it will organize much of phytochemical research in the near future.

While the remaining papers in this volume are more traditional offerings, two deserve special mention. The paper by Beck and Reese is an important contribution to the understanding of insect nutritional physiology in the context of allelochemicals and should be consulted by researchers conducting feeding experiments with herbivorous insects. The paper by Roeske *et al.* is a lengthy summary of the authors' work on the processing of cardenolides by monarch butterflies. Of particular interest to ecologists is their technique for revealing the host plants used by larvae on the basis of the cardenolide content of adult tissue.

Two papers deal with the parallel occurrence of similar chemicals in plants and insects. The review by Rodriguez and Levin is a useful summary but the theoretical discussion is shallow. The paper by Hendry *et al.* would not be acceptable in a refereed journal as it is. The authors are confused about how natural selection operates and just what constitutes a scientific theory.

In the final paper Mothes provides a review of the classic work by himself and his colleagues on intraspecific genetic variation in the alkaloids of the opium poppy. Some of his evolutionary-philosophical remarks are almost mystical. I hope this is a problem of translation.

In summary, this volume is very spotty in terms of the quality and importance of its component papers. While I am pleased to have a copy (and feel most specialists in insect-plant research should have one), I do not feel that it is worth its price to a nonspecialist or to a graduate student.

## Phagocytic Cells

**Immunobiology of the Macrophage.** DAVID S. NELSON, Ed. Academic Press, New York, 1976. xviii, 634 pp., illus. \$39.

Much credit should go to David Nelson for editing this timely, useful, and nicely produced collection of 23 articles concerned with many different aspects of the physiology and function of macrophages. Although these phagocytic cells do not possess an antigen-specific recognition system, they express on their surface several types of receptors for complement and antibody and do play a major role in the regulation of both humoral and cell-mediated immune responses; the importance of macrophages has been well established in cell-cell interactions, in inflammatory processes, in chemotaxis, and in defense against microbial infections, and they are implicated in the killing of tumor cells. All these topics are discussed in this volume.

The book suffers from the usual defects associated with multiple authorship: there is considerable overlap in material covered by different chapters, whereas some relevant matters receive relatively little attention. For example, at least four full chapters deal with the role of macrophages in vitro in antibody production, T-cell activation, and T- and B-cell collaboration; yet evaluation of controversial results is missing. Each group of workers uses its pet tissue culture system; presumably minor changes in culture, animal colonies, and source of antigen, as well as the difficulties associated with fractionation of macrophages or their complete removal from a lymphoid cell population, account for variability in the results. In contrast to the extensiveness of coverage of the in vitro exper-

imentation in murine systems is the brevity of the chapter on macrophages and their disorders in man (less than 4 percent of the book).

Some of the chapters on topics less frequently reviewed are particularly useful—for example, those on monocyte kinetics in infection, macrophage membranes, and the availability of virus-transformed cell lines of macrophages. Overall the book will be most welcome to research workers in immunology and related fields who wish to be brought up to date concerning recent trends in macrophage research and useful experimental model systems. In addition, it provides most useful and extensive reference lists—a great boon for both experts and newcomers to a field with an immense literature.

## Books Received

**Abhängigkeiten.** Ansätze zur Verhaltensmodifikation. Roman Ferstl and Sibylle Kraemer, Eds. Urban und Schwarzenberg, Munich, 1976. viii, 204 pp. Paper, DM 24. Fortschritte der Klinischen Psychologie 9.

**Advanced Geostatistics in the Mining Industry.** Proceedings of a NATO Advanced Study Institute, Rome, Oct. 1975. M. Guarascio, M. David, and C. Huijbregts, Eds. Reidel, Boston, 1976. xvi, 462 pp., illus. \$39.50. NATO Advanced Study Institutes Series C, vol. 24.

**Advances in Biochemical Engineering.** Vol. 4. T. K. Ghose, A. Fiechter, and N. Blakebrough, Eds. Springer-Verlag, New York, 1976. vi, 174 pp., illus. \$24.60.

**Advances in Chromatography.** Vol. 14. J. Calvin Giddings, Eli Grushka, Jack Cazes, and Phyllis R. Brown, Eds. Dekker, New York, 1976. xvi, 460 pp., illus. \$34.50.

**Annual Review of Astronomy and Astrophysics.** Vol. 14. Geoffrey R. Burbidge, David Layzer, and John G. Phillips, Eds. Annual Reviews, Palo Alto, Calif., 1976. x, 500 pp. \$17.

**Asiatic Influences in Pre-Columbian American Art.** Paul Shao. Iowa State University Press, Ames, 1976. x, 196 pp., illus. \$25.

**Atoms and Molecules in Electric Fields.** Nils Ryde. Almqvist and Wiksell, Stockholm, 1976. iv, 456 pp., illus. Sw.kr. 315.

**City Centers in Transition.** Proceedings of a conference, Rougemont, N.C., June 1976. Shirley F. Weiss, Raymond J. Burby, III, and Barbara G. Rodgers, Eds. Center for Urban and Regional Studies, University of North Carolina, Chapel Hill, 1976. xii, 90 pp. Paper, \$6.

**Comparative Animal Cytology and Histology.** Ulrich Welsch and Volker Storch. Translated from the German edition (Stuttgart, 1973). University of Washington Press, Seattle, 1976. xiv, 344 pp., illus. \$14.50. Biology Series.

**The Computer in Health Care Systems in**

**Some European Countries and in the United States.** Proceedings of a symposium, Milan, Sept. 1973. Ezio Masè, Morris F. Collen, and Sergio Gorini, Eds. Piccin Medical Books, Padua, Italy, 1976. x, 174 pp., illus. \$15.

**A Dictionary of Thermodynamics.** A. M. James. Halsted (Wiley), New York, 1976. xii, 262 pp., illus. \$14.95.

**Dwellers in the Sea.** Barry Fell. Photographs and commentary by Douglas Faulkner. Reader's Digest Press, New York, 1976 (distributor, Crowell, New York). 196 pp. \$40.

**The Ecological Transition.** Cultural Anthropology and Human Adaptation. John W. Bennett. Pergamon, New York, 1976. x, 378 pp. Cloth, \$16.50; paper, \$9.50. Pergamon Frontiers of Anthropology Series. Pergamon International Library.

**The Electric War.** The Fight over Nuclear Power. Sheldon Novick. Sierra Club Books, San Francisco, 1976. 376 pp. + plates. \$12.50.

**Electromagnetism, Man and the Environment.** Joseph H. Battocletti. Westview Press, Boulder, Colo., 1976. viii, 84 pp. \$12.75. Westview Environmental Studies.

**Energy Policies of the World.** Vol. 1, Canada, China, Arab States of the Persian Gulf, Venezuela, Iran. Gerard J. Mangone, Ed. Elsevier, New York, 1976. xx, 388 pp. \$19.50.

**Ethnographic Film.** Karl G. Heider. University of Texas Press, Austin, 1976. xiv, 166 pp. \$9.95.

**Marine Optics.** N. G. Jerlov. Elsevier, New York, 1976. xiv, 232 pp., illus. \$29.75. Elsevier Oceanography Series, 14. Second edition of *Optical Oceanography*.

**Marine Pollutant Transfer.** H. L. Windom and R. A. Duce. Lexington (Heath), Lexington, Mass., 1976. viii, 392 pp., illus. \$21.95.

**The Mating Game.** Robert Burton. Crown, New York, 1976. 160 pp., illus. \$12.95.

**Mensch und Nahrungspflanze.** Der Biologische Wert der Nahrungspflanze in Abhängigkeit von Pestizideinsatz, Bodenqualität und Düngung. Werner Schuphan. Junk, The Hague, 1976. x, 172 pp., illus. Paper, Dfl. 30.

**Merlin's Puzzler.** Charles Barry Townsend. Hammond, Maplewood, N.J., 1976. vi, 122 pp., illus. Paper, \$3.50.

**Modern Methods in Forest Genetics.** Papers from a workshop, Göttingen, Germany, July 1973. J. P. Miksche, Ed. Springer-Verlag, New York, 1976. xiv, 290 pp., illus. \$23.80. Proceedings in Life Sciences.

**Modern Therapies.** Virginia Binder, Arnold Binder, and Bernard Rimland, Eds. Prentice-Hall, Englewood Cliffs, N.J., 1976. x, 230 pp. Cloth, \$8.95; paper, \$3.95. A Spectrum Book.

**Nebraska Symposium on Motivation 1975.** Conceptual Foundations of Psychology. William J. Arnold, Ed. University of Nebraska Press, Lincoln, 1976. xxviii, 586 pp., illus. Paper, \$11.95. Current Theory and Research in Motivation, vol. 23.

**The New American Dream Machine.** Toward a Simpler Lifestyle in an Environmental Age. Robert L. Sansom. Anchor/Doubleday, Garden City, N.Y., 1976. x, 252 pp. \$8.95.

**Nonlinear Functional Analysis and Differential Equations.** Proceedings of a conference, East Lansing, Mich., June 1975. Lamberto Cesari, Rangachary Kannan, and Jerry D. Schuur, Eds. Dekker, New York, 1976. xii, 352 pp. Paper, \$29.50. Lecture Notes in Pure and Applied Mathematics, vol. 19.

**Nuclear Techniques in Geochemistry and Geophysics.** Proceedings of a panel, Vienna, Nov. 1974. International Atomic Energy

Agency, Vienna, 1976 (U.S. distributor, Unipub, New York). viii, 272 pp., illus. Paper, \$17. Panel Proceedings Series.

**Nutrition in Preventive Medicine.** The Major Deficiency Syndromes, Epidemiology, and Approaches to Control. G. H. Beaton and J. M. Bengoa, Eds. World Health Organization, Geneva, 1976 (U.S. distributor, Q Corporation, Albany, N.Y.). 590 pp., illus. \$34.20. World Health Organization Monograph Series, No. 62.

**Oddities of the Mineral World.** William B. Sanborn. Van Nostrand Reinhold, New York, 1976. 142 pp., illus. \$9.95.
