**NEW FROM BECKMAN:**

*Digital accuracy  
in a tabletop centrifuge*

The AccuSpin™ centrifuge from Beckman. It brings today's technology to tabletop centrifugation.

Controls are digital for accuracy that can't be matched by analog models. Flashing diagnostics and digital displays let you know run conditions at a glance. A digital speed control system maintains set speed with no overshoot—accurate to 10 rpm.

Programmed acceleration gives you a gentle start to protect gradients. Dual braking lets

you select a gentle stop. And the AccuSpin is so quiet, it's hard to believe it's running.

#### **High Speeds for Rapid Throughput**

The AccuSpin centrifuge reaches 5900 rpm and 4800 g with fixed angle rotors, 4200 rpm and 3200 g with the horizontal rotor. Maximum capacity is one full liter.

#### **Designed for Convenience**

The AccuSpin FR has an advanced, frost-free refrigeration system so there's never ice or water in the rotor chamber. Both models have an easy-to-clean, removable bowl and front motor access for fast brush changes and minimal down time.

#### **Safety Features**

Like all Beckman centrifuges, the AccuSpin is designed for UL listing and CSA approval. It's equipped with self-seating rotor buckets, steel barrier ring and automatic door interlock. To protect against tube breakage, the tube holders are rubber-based. Clear plastic covers provide aerosol protection—with no special tools or adapters required.

The digital AccuSpin centrifuge. It's setting new standards for tabletop centrifuges. For details ask your Beckman representative, or write: Beckman Instruments, Inc., P.O. Box 10200, Palo Alto, CA 94304.

# SEVENTH ANNUAL BRISTOL-MYERS AWARD FOR DISTINGUISHED ACHIEVEMENT IN CANCER RESEARCH

The Bristol-Myers Company presents an annual award to a scientist making an outstanding contribution in cancer research. The candidates for the award are to be nominated by medical schools, free-standing hospitals and cancer research centers. Only one nomination from each institution is permitted.

AWARD: \$50,000 U.S.

DEADLINE FOR RECEIPT OF NOMINATIONS

December 1, 1983

ANNOUNCEMENT OF AWARD RECIPIENT

Spring 1984

## SELECTION COMMITTEE

Albert H. Owens, Jr., M.D., Selection Committee Chairman  
The Johns Hopkins University School of Medicine

Daniel E. Bergsagel, M.D., D.Phil.  
Ontario Cancer Institute/  
Princess Margaret Hospital

Gianni Bonadonna, M.D.  
Istituto Nazionale per lo Studio  
e la Cura dei Tumori, Milan

Harris Busch, M.D., Ph.D.  
Baylor College of Medicine

Emil Frei, III, M.D.  
Harvard Medical School/  
Dana-Farber Cancer Center

Ken R. Harrap, Ph.D., D.Sc.  
Institute of Cancer Research, Surrey

Salvador E. Luria, M.D.  
Massachusetts Institute of Technology  
Cancer Research Center

Paul A. Marks, M.D.  
Memorial Sloan-Kettering  
Cancer Center

Henry C. Pitot, M.D., Ph.D.  
McArdle Laboratory for  
Cancer Research

Saul A. Rosenberg, M.D.  
Stanford University School of Medicine

Alan C. Sartorelli, Ph.D.  
Yale University  
School of Medicine

Philip S. Schein, M.D.  
Georgetown University School of Medicine

John E. Ultmann, M.D.  
The University of Chicago  
School of Medicine

Rules and official nomination forms are available from: Secretary, Award Committee,  
345 Park Avenue, Room 43-38, New York, New York 10154, or (212) 546-4339.

## COVER

Softshell turtle (*Trionyx spiniferus*) in the process of hatching from its rigid-shelled egg. Eggs like this exchange little, if any, liquid water with the surrounding environment during the course of incubation. Although biologists have come to expect embryos developing in eggs of this kind to convert wastes from protein catabolism into insoluble urates, embryonic softshell turtles convert nitrogenous wastes into soluble urea and ammonia. See page 1049. [Mary J. Packard, Colorado State University, Fort Collins 80523]

# ***The best of the old becomes the best of the new.***

If you are using research biochemicals in your laboratory, chances are you've heard the phrase, "excellence in biochemistry". For over 30 years P-L Biochemicals has earned the right to use these words with a long history of product "firsts" and consistent quality. From this well-established tradition and firm foundation will come some very exciting changes in the very near future.

## ***We're changing our name...***

The news is that Pharmacia Fine Chemicals, a world leader in the field of biomolecular purification technology has joined forces with P-L Biochemicals. The combination of separation technology and research biochemicals come together to produce a level of experience, perspective and resources that is unmatched within this industry. Now, biochemicals, molecular biology products, separation media and instrumentation are available through one highly skilled organization. The new P-L organization is called **Pharmacia P-L Biochemicals, Inc.** Yes we've changed our name...

## ***But not our commitment.***

The commitment of both companies to produce outstanding products from the most recent technology remains foremost in the objectives of this new organization. Look to the future for exciting new developments from **Pharmacia P-L Biochemicals, Inc.**

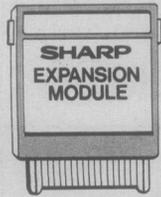

2202 North Bartlett Avenue, Milwaukee, WI 53202

ANOTHER TECHNOLOGICAL BREAKTHROUGH FROM SHARP.

# THE HAND-HELD COMPUTER WITH POWERFUL CONNECTIONS.

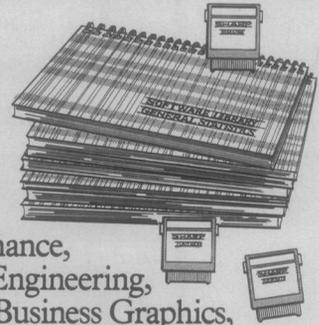

**24K**  
(8K + 16K)

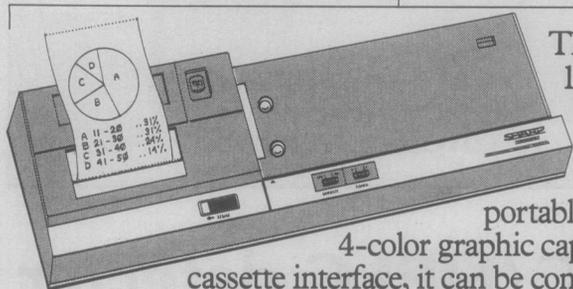

Now you can take 24K with you wherever you go—thanks to the new Sharp PC-1500A. It's the 8K hand-held computer that expands to a powerful portable 24K computer system when the optional 16K memory module is added. And because it's programmable in Basic, the most popular computer language, it gives you the power and capabilities to handle most scientific, engineering and management uses.

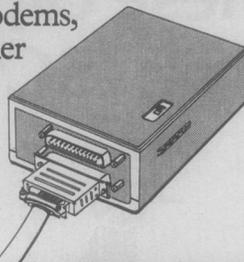

The PC-1500A also has a complete library of plug-in software programs including: Sharpcalc (Spreadsheet), Finance, Math, Electrical Engineering, Circuit Analysis, Business Graphics, General Statistics, Statistical Distribution and Graphics Development.

195 (W) x 25.5 (H) x 86 (D) mm

The optional CE-150 Color Graphic Printer/Cassette Interface not only gives the system portable printing but also 4-color graphic capabilities. And as a cassette interface, it can be connected with up to two cassette tape recorders—one for storage and one for recall. The CE-158's RS-232C Interface allows communication links to a wide variety of peripherals such as modems, bar-code readers, data bases, as well as other micro, mini or mainframe computers.

**\$** Perhaps the only feature of our portable computer system that won't overpower you is its price. It's not only less than you'd expect, it's probably hundreds of dollars less. So before you spend a lot of money and get a lot less computer, call toll-free for more information, dial (800)-447-4700.

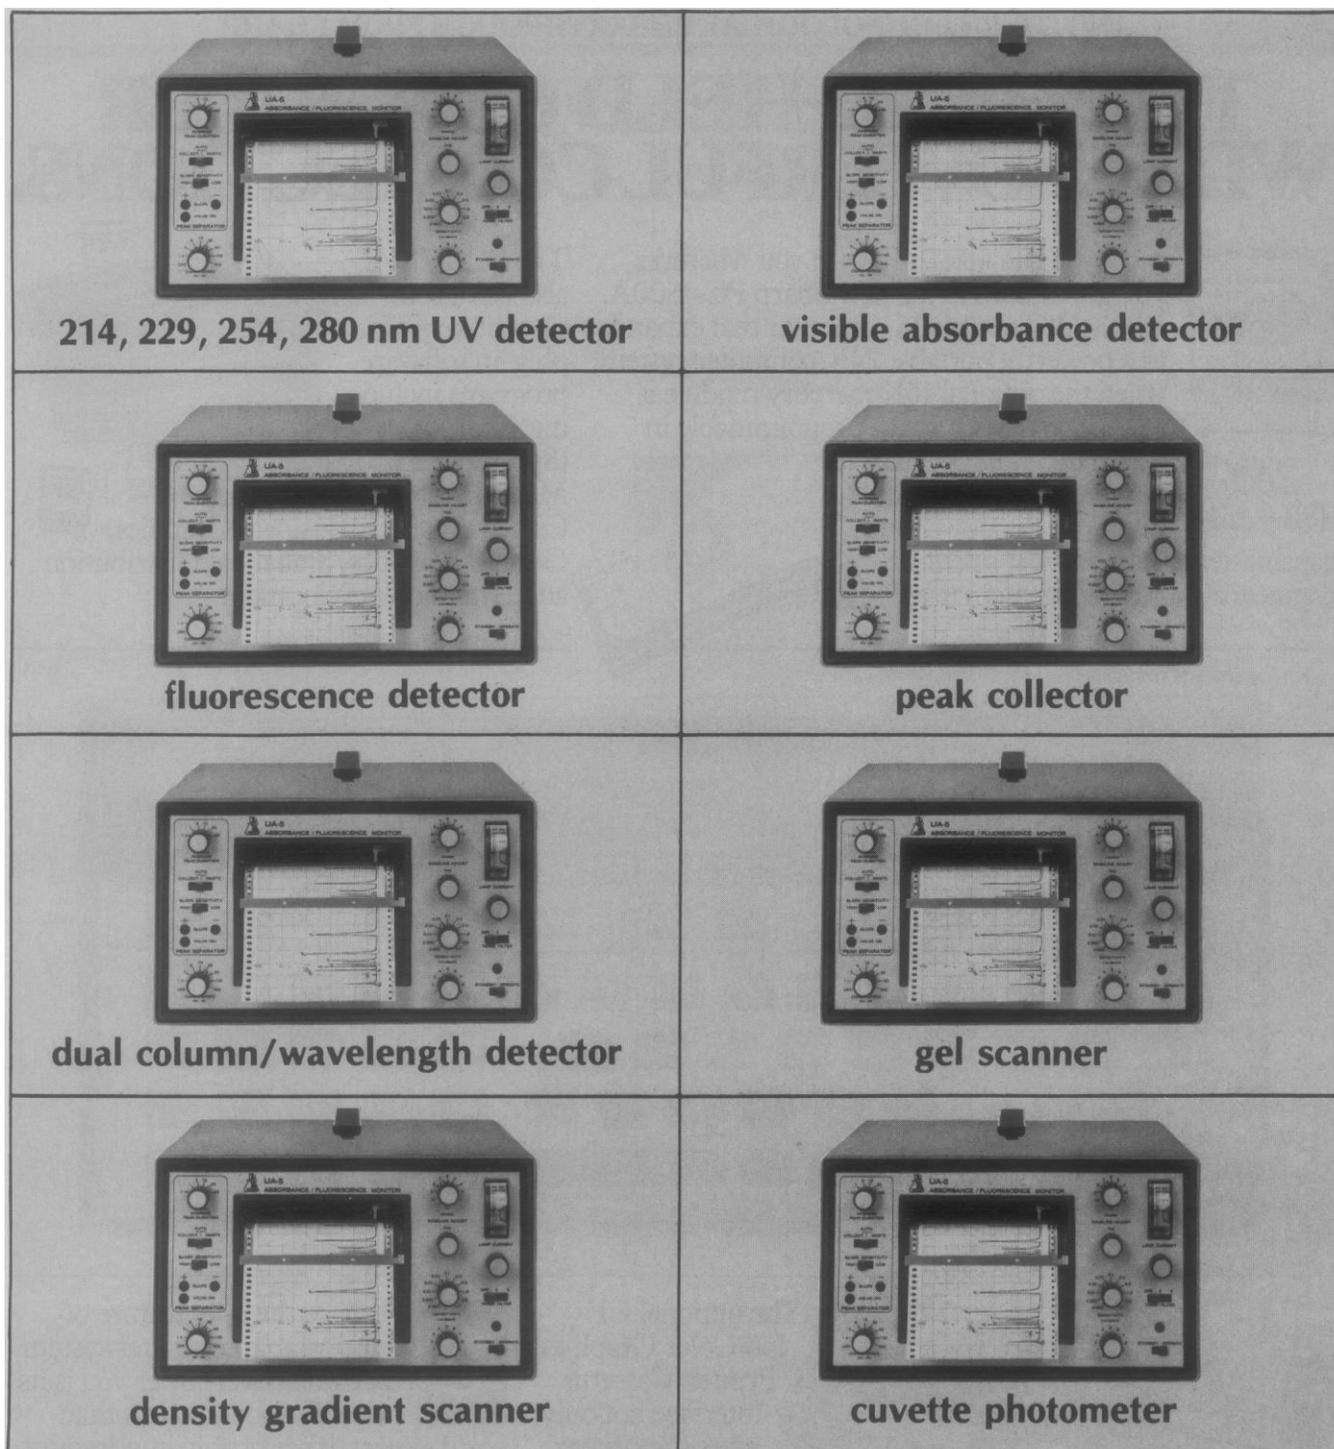

Watch for our TV commercial to learn more about the latest advance in computer technology from Sharp. We replaced a half-million transistors and diodes with one tiny "chip."

Basic tools for tissue culture investigation:  
Olympus Model CK  
Inverted Biological Microscopes

Up to now, as a tissue culture investigator, you've adapted a microscope designed for another discipline to your use. In areas such as monoclonal antibodies, tissue typing and recombinant DNA, the CK offers a basic tool designed exclusively for you. With comfort and ease of operation.

The CK microscopes were conceived as the primary instruments for in vitro examination, without superfluous features so that it is reasonably priced. But without sacrificing capability, such as phase contrast.

Compare the Olympus CK models. Contact the Olympus Authorized

Dealer listed in your Yellow Pages, or Precision Instrument Division, Olympus Corporation of America, 4 Nevada Drive, New Hyde Park, NY 11042.

# How Exxon has pioneered systems to optimize

## Roy Lieber works at the leading edge of process control.

As an operator at an Exxon refinery monitors the schematic of a process on the CRT, the representation of the furnace suddenly changes color and begins to pulse, indicating a condition requiring attention. He touches the screen and corrective action is taken. Elsewhere another operator advises the system by CRT to switch a tower's emphasis from propane to butane as a result of analysis of market data.

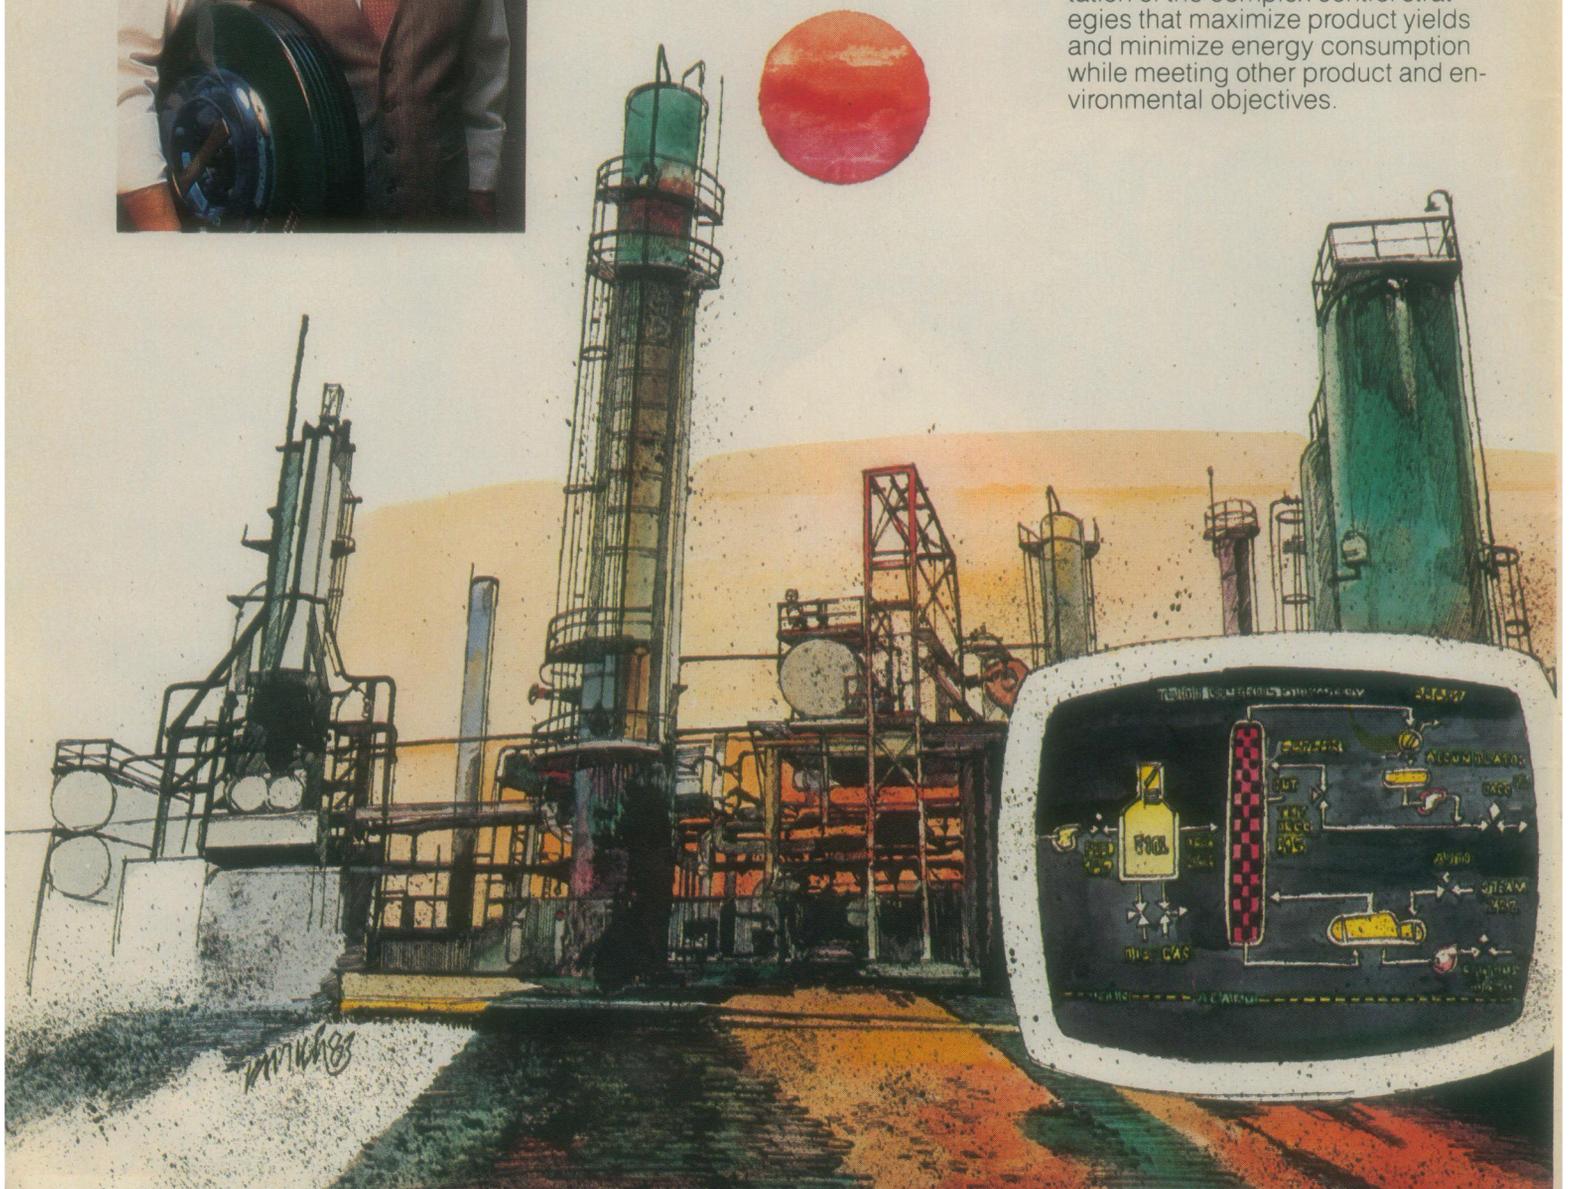

Such advanced process control is the result of a long history of pioneering in the application of computers to refinery operation. It goes back to the early 1960's when Roy Lieber and his colleagues at Exxon Research and Engineering Company (ER&E) intro-

duced the use of computers for closed loop control. These first systems, which used the primitive mini-computers of that era, provided superior regulatory control despite their limited functionality.

### Precision refining

As computer technology advanced, the systems designed by ER&E became progressively more sophisticated. Combining control theory with process know-how further expanded applications, including the automation of related refinery functions such as blending, product storage and shipping.

Current systems permit implementation of the complex control strategies that maximize product yields and minimize energy consumption while meeting other product and environmental objectives.

# advanced computer refinery operation.

User friendliness is also being stressed. Through an interconnected, hierarchical network of micro, mini and maxi computers, today's operators monitor the entire refinery from work stations housing three to five CRTs.

## Future trends

Exxon has installed more than 100 closed loop computer control systems in its refineries and chemical plants worldwide. In fact, the majority of these plants are totally under computer control.

Advanced as the computerized process control systems are today, Roy Lieber feels there is still great potential for future economies and

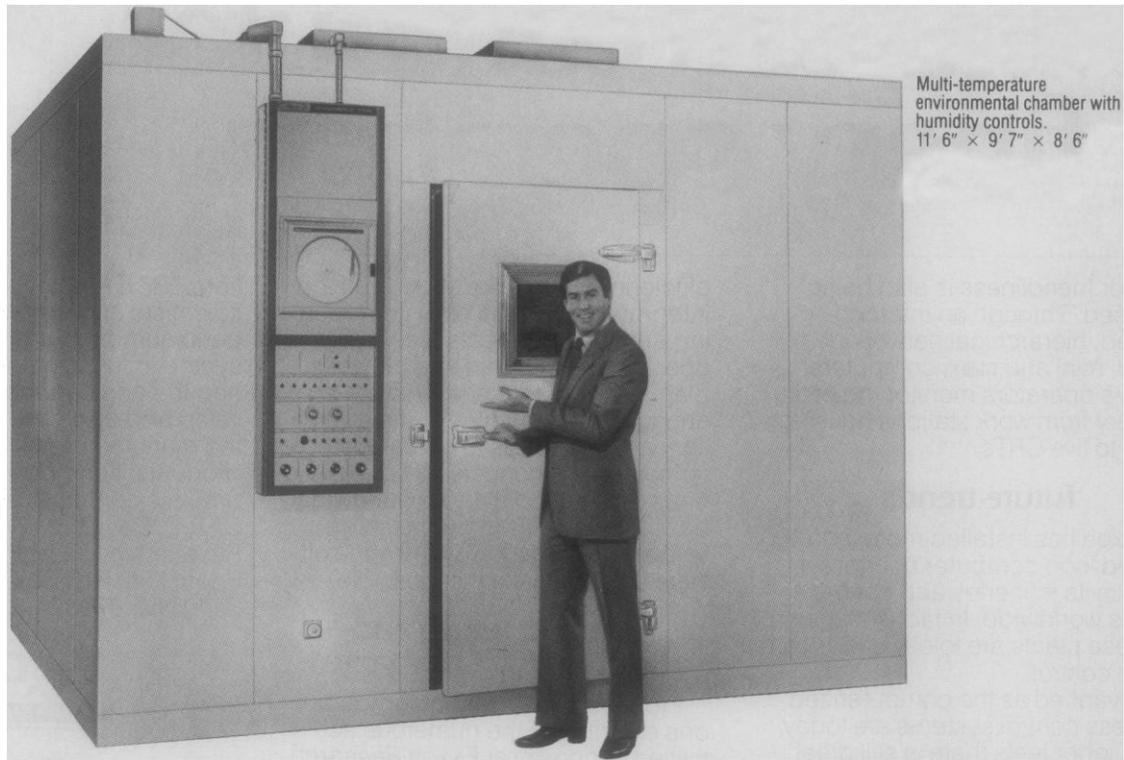

efficiencies. He talks about work on integrated networks of systems sharing data on all aspects of refinery operation both within and between plants. Using advances in electronics and concepts such as artificial intelligence, the goal is to optimize single refineries and conceivably even refineries on a regional and a worldwide basis. He is helping guide the development of the hardware and software that will make this possible.

## Exxon Research and Engineering Company

Process control technology is but one example of the numerous activities underway at Exxon Research and Engineering Company. A wholly owned subsidiary of Exxon Corpora-

tion, ER&E employs more than 2,000 scientists and engineers working on petroleum products and processing, synthetic fuels, pioneering science and the engineering required to develop and apply new technologies in the manufacture of fuels and other products. For more information on process control or ER&E, write Dr. E.E. David, Jr., President, Exxon Research and Engineering Company, Room 704, P.O. Box 101, Florham Park, N.J. 07932.

# OUR WALK-INS FINISH LAST.

The people who brought you the first "all metal" walk-in environmental rooms are the same people whose quality-built prefabricated, prewired, pretested walk-in environmental rooms finish last. Everytime. In fact, some of our rooms have been in service for over 20 years!

Hotpack has built its 75-year reputation on building reliable, controlled temperature/controlled humidity equipment that outperforms and outlasts the competition. Our walk-ins are no exception.

But it's what we *know* about walk-ins that sets us apart. As experts in the design, construction, installation and ser-

vice of superior walk-ins for every need, we know how to build the most cost-effective rooms; we know what control systems to recommend for specific requirements; and we make sure every room is pretested thoroughly before it leaves our plant.

Available in all sizes, shapes and simulations, we offer 242 standard sizes of walk-ins with any combination of temperature, humidity and lighting needs. All accurate within  $\pm .3^{\circ}\text{C}$  chamber temperature gradient.

We offer three types of convenient, flexible panelized construction. Channellight with fiberglass insulation and

Channellight with urethane insulation, both of which offer superior structural integrity and rigidity, as well as foamed-in-place urethane. Our selection of control systems includes the most sophisticated microprocessor-based digital programmers.

If you're looking for superior environmental test chambers that stand the test of time, we invite you to take advantage of our free planning service. Just call us toll free at 800-523-3608, in Pennsylvania, call 215-824-1700. Or write Hotpack Corporation, 10940 Dutton Road, Philadelphia, PA 19154. And let us build a room for you!

## WE BUILD EQUIPMENT TO WORK.

OUR 75<sup>TH</sup>  ANNIVERSARY

From Bausch & Lomb...  
The most innovative instrument in decades

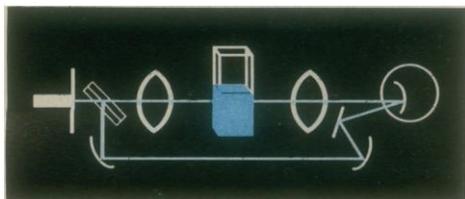

# Delivers more than any conventional single-beam

- More tests per hour • More cost savings per test
- More automated testing versatility • More accurate test results • More overall value

The new SPECTRONIC® 1001 split-beam spectrophotometer from Bausch & Lomb—the most innovative instrument since the SPECTRONIC 20\*—has what it takes to satisfy all your requirements... satisfy them more completely than any conventional single-beam. It even delivers some "indispensible" features you may not have thought of yet:

## Totally new split-beam optical system

Brings double-beam stability to single-beam applications. Plus **extra-wide UV-visible wavelength range** for testing versatility, **super energy** for no-dilution analysis of the murkiest samples, and **exceptional resolution** for greater accuracy and fine-structure definition.

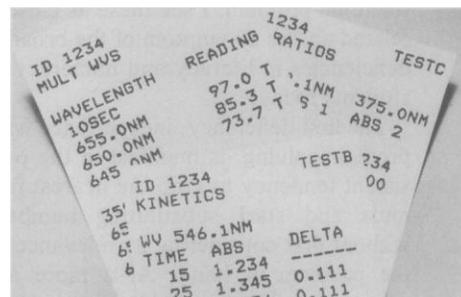

Revolutionary split-beam optical system provides the stability of a double-beam by using a small fraction of the abundant light as a reference beam.

User friendly soft-touch keyboard is remarkably responsive and simple to learn. Big alphanumeric display provides 2-way communication in English.

## Smartest hardest-working microprocessor in the business

Gives you **extreme accuracy** with automatic peak finding and automatic multi-point standard curve generation and storage—**time savings** with automatic multi-wavelength tests, automatic absorbance-ratio and absorbance-difference calculations (one-time or kinetic)—**easier training and fewer errors** with simplified keyboard, step-by-step

Optional 20-column printer ensures complete, effortless test documentation.

operator prompting, and completely automated execution of analytical programs using up to 30 sets of your own parameters.

## And more

There's much more to tell about the new 1001. And the person to tell it is your local Bausch & Lomb distributor representative. Ask for a demonstration. Discover all the reasons why the new SPECTRONIC 1001 split-beam makes any conventional single-beam the second best instrument for you. Call 800-828-6967 (in NYS call 716-338-8423) or write: Bausch & Lomb Inc., P.O. Box 10207, Rochester, N.Y. 14610.

\*The world's first mass-produced spectrophotometer and all-time best seller

Full line of accessories under microprocessor control gives you fast, repeatable results at lowest cost per test.

**BAUSCH & LOMB**

FOR TODAY'S FACULTY AND COLLEGE STAFF MEMBERS\* FROM 18 TO 80.

# Whether you're thinking retirement or not, review the plan that provides for cash withdrawal and/or a lifetime income.

**TIAA-CREF Supplemental Retirement Annuities (SRAs) offer you substantial flexibility including cash withdrawal and/or lifetime retirement income. You can even reduce your income taxes now!**

You can begin contributions to an SRA at any age and begin benefits at any age up to age 71 unless you are still employed (then you can delay beginning benefits until age 80). For example, you could start contributions at age 25, and choose to begin benefits or withdraw cash at age 34, 40 or 50, regardless of your employment status.

### Get your money at any time.

You can receive benefits as a lifetime income or over a fixed period of from 2 to 10 years. What's more, if you need it (even while employed by your current employer), you can withdraw all the money you have accumulated by surrendering your contracts. Or, you can withdraw \$1,000 or more every six months. There is never a cash surrender charge.

**Contributions are tax-deferred, so you pay less income taxes now.**

The federal income tax on your contributions is deferred until they are paid to you as benefits. So, you pay less tax now.

### Changing employers? Take SRAs with you.

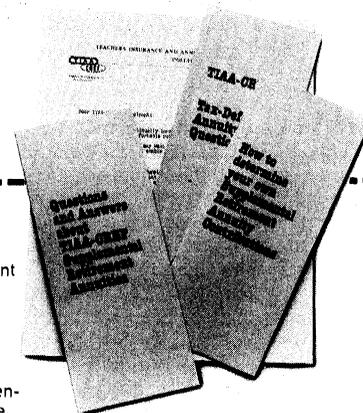

Since you own your Supplemental Retirement Annuities, you take them with you if you leave your current employer. You can make contributions through any institution that makes Supplemental Retirement Annuities available to staff members. Contributions can be as little as \$25 a month.

### Full information.

Complete and mail the coupon for an SRA Information Kit today. You'll get full details about all the advantages SRAs have to offer, why this plan suits so many financial situations and age groups and how much you may contribute to the plan.

\*TIAA-CREF provides annuities and other services for employees of colleges, universities, private schools and certain other nonprofit tax-exempt educational and research institutions.

# THERE ARE STILL A FEW THINGS AS HARD WORKING AS AN OHAUS BALANCE.

Being eager to do a good job comes naturally to some people. And it shows in their work. At Ohaus, we've been busy making the best balances in the world for over 75 years. Balances built to work hard and built to last.

Every Ohaus balance has the kind of quality and dependability you expect from a leader. Take our Triple Beam. It's the tough top loader used in labs, plants and schools around the world. It's the precision pick for checkweighing, mixing and compounding, counting and any other job where accuracy's crucial. Maybe that's why it's the most widely used balance in the world today.

Whatever your weighing need, there's an All-American made

Ohaus balance ready to do the hard work. And that makes your job just a little bit easier. Send for our new catalog today.

# PICTURE PERFECT

There's a breakthrough in photomicrography that's the image of perfection, the new Nikon UFX photomicrographic system.

An exclusive Direct Projection System transmits 100% of the available light to the film. The result is drastically shorter exposures, greatly enhanced low

light sensitivity and a striking improvement in contrast. Computer control assures automatic exposure accuracy in either 1% spot or integrated average metering modes. Yet, this system is astonishingly simple to operate.

For the total picture of Nikon's new FX systems for

35mm, Polaroid® and large format photomicrography, write: Nikon Inc., Instrument Division, 623 Stewart Avenue, Garden City, NY 11530. (516) 222-0200.

## Communication Between Scientists

Unhealthy long-term trends are evident in both written and verbal scientific communication. The problems of the proliferating scientific literature have been frequently discussed. Less attention has been given to the equally important verbal communication.

Those who are familiar with trends are especially concerned about the evolution of annual meetings of scientific societies. Historical records of meetings describe them as gatherings in which enthusiasm ran high, spirits were lifted, and much exciting information was exchanged. Crowds were smaller then, and meetings were held under agreeable circumstances, either on college campuses or at some other suitable spot.

As the number of scientists increased, it was inevitable that the character of the annual meeting would change. But the evolution was so slow that little thought was given to the danger that the values of personal interchange might be lost.

Occasionally at a big meeting attendees meet peers with whom they can enjoy mutual intellectual stimulus. However, it is decades since an annual meeting as a whole was described in glowing terms. What do attendees experience at a large annual meeting? The cold, impersonal, commercial atmosphere of hotels sets the tone. Sessions with forty or more simultaneous papers present a bewildering requirement for choice. Actually, the decision made is not crucial. The typical session is loaded with 10- or 15-minute papers delivered with the crutch of slides. Almost invariably there are far too many slides; the content on each is so excessive that it cannot be read, let alone comprehended. In the decades since slides came into traditional use, no substantive improvement in their design has occurred.

Despite the limited value of the meetings, the tradition of obligatory attendance persisted. But major societies are now experiencing a change. At meeting after meeting, attendance has been declining from earlier peaks. Current overall costs for a participant average \$1000 or more. In a time of tight budgets, realism about the value of the annual meeting is overcoming tradition.

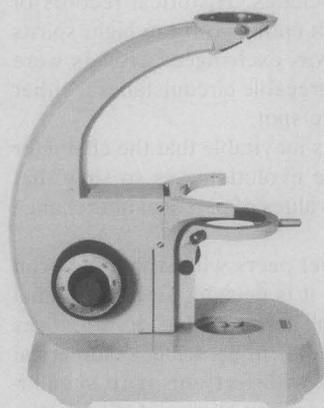

For established scientists, the decay of the typical meeting is no loss. They have in place a rich variety of communication links. The most deeply satisfying of these in one-on-one conversations with peers. There they can enjoy the mutual exchange of ideas and enthusiasm, as did scientists a century ago. But the potential for excitement is even greater now since air travel makes their peers readily accessible. Once a level of mutual trust and understanding is achieved, the telephone and electronic mail constitute effective supplements to personal encounters. Some scientists are extroverts who hunger for the presence of a group of peers. This involves the nuisance of mutual scheduling, but can be arranged. A favorite form of meeting is the small closed symposium. Around the world there is increasing use of the formula initiated by the Gordon Research Conferences. These meetings last a week and have about 100 invited attendees. They are held in secluded spots where participants are free from distractions and the presence of nonscientists. Part of the time is spent in loosely scheduled sessions. However, there is adequate time for the personal interactions that are so crucial and enjoyable.

Despite diminishing attendance, the scientific societies will continue to hold annual meetings. They will continue to follow firmly established traditions. The simultaneous sessions will continue, often with audiences of fewer than ten. The formula of 10-minute talks with scores of illegible slides will persist. The scientific community, including its elite, should give serious thought to this. In a few large scientific centers, young people receive adequate stimulus from professors and peers. But in smaller institutions, critical components of enthusiasm are missing. Professors may do their part in trying to indoctrinate an appreciation of the beauty of science, its great structure of knowledge, and the intellects of those who built it. But they need help which the big annual meetings do not supply.

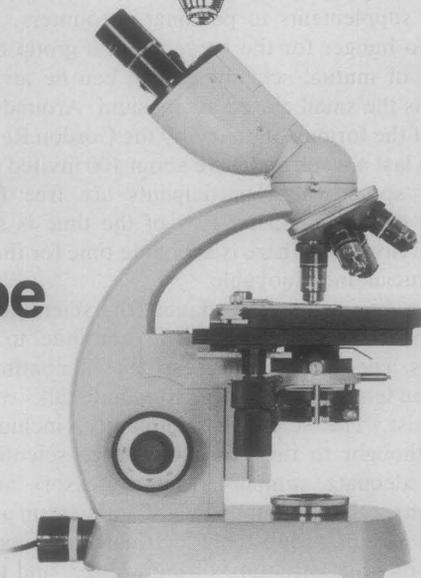

—PHILIP H. ABELSON
