# Now With System 1, High Yield DNA Synthesis Is Faster Than Ever Before

Recent Beckman advancements in DNA synthesis technology have reduced cycle times to less than 15 minutes! Now you will achieve more couplings per day with your System 1 DNA Synthesizer — with the high yields that only the patented phosphoramidite\* chemistry can provide.

This proprietary chemistry provides higher yields for longer oligomer syntheses than other chemistries. And the Beckman controlled-pore glass reaction column increases yields even more — typically to 98%+.

## Coupling Efficiency Monitor

With System 1, there's never any question whether deblock-

ing is complete. A real-time monitor records the release of the dimethoxytrityl (DMT) blocking group. This saves time by eliminating the need to collect and analyze DMT fractions. The monitor prevents excessive deblocking and reduces depurination from acid exposure. If deblocking is incomplete, System 1 will automatically shut down, so there's no waste of reagents.

## Matched Beckman HPLC System

Faster than polyacrylamide gel electrophoresis, HPLC is becoming the preferred

purification technique for short oligomers. You can purchase the System 1 with a matched Beckman HPLC system, ideal for purification of primers, probes and linkers.

For more about the advantages of System 1 and how it's being used in molecular biology research around the world, ask for our new series of application data sheets. Contact your Beckman representative, or write: Beckman Instruments, 1050 Page Mill Rd., Palo Alto, CA 94304, or P.O. Box 76, 1211 Geneva 6, Switzerland.

STD. 15 20 33 45 60 STD.

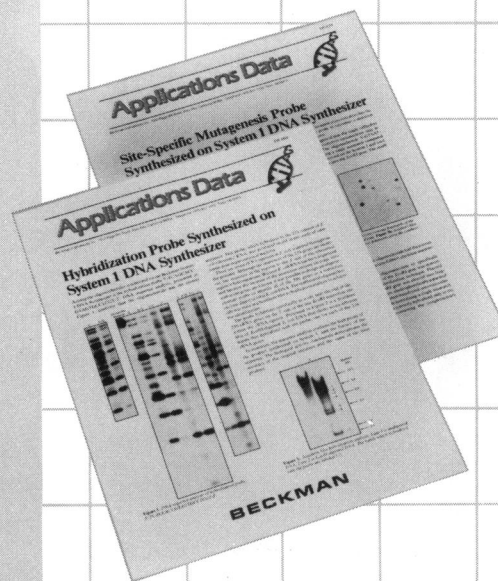

HPLC trace of crude 20-mer synthesized on System 1 DNA Synthesizer, using buffer 0.1 TEA Acetate with 5% CH<sub>3</sub>CN pH6.5, and buffer 100% CH<sub>3</sub>CN (HPLC grade). Sequence is 5' TCA CAG GTT TTG AAT TCA CA 3'.

Electrophoresis purification gel of 15-mer, 20-mer, 33-mer, 45-mer and 60-mer oligonucleotides synthesized on the Beckman System 1 DNA Synthesizer. The left lane is a gel standard for 20, 29-30, 36, 45 and 59-mer oligomers; the right lane is a 59-mer standard.

\*U.S. Patent Numbers: 4,415,732 and 4,458,066.

# For higher RNA transcript yields, use Du Pont RNase-free SP6 RNA Polymerase.

Because Du Pont NEN Products SP6 RNA Polymerase is so free from contaminating ribonuclease, you can now synthesize many more full-length RNA transcripts than otherwise possible.

This high purity also means more reproducible results, shorter processing times, and lower costs.

Clearly the kind of performance you'd expect from NEN Products, pioneers in using this enzyme for preparing labeled RNA.

For extra convenience, we offer our SP6 RNA Polymerase either by itself (NEE-151) or in packform with pSP62-PL gene cloning vector (NEE-151A).

Compare your present RNA labeling techniques with ours. Ask your Du Pont NEN Research Products representative for our free SP6 Information Kit.

Or call toll-free today: 800-225-1572.

(In Mass. and international: 617-482-9595.)

## COVER

The color image represents a cross section of a spiraling gas flow near a black hole. The colors represent the gas density in every zone on the computational grid; density decreases in spectral order from red to blue. The underlying grid can be seen as the small squares at the outer edges of the image. The red stripes that "pinch in" at the equator (horizontal plane) are shock waves. The heart-shaped region is a fat disk orbiting the black hole. See page 403. [Computation by John Hawley and Larry L. Smarr, Department of Astronomy, University of Illinois. Calculations were performed on the Cray-1 supercomputer, Max-Planck Institut für Physik und Astrophysik, Garching, Federal Republic of Germany]

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to promote the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

THREE VOLUMES  
IN THE AUTOMATIC  
PROGRAMMING  
INFORMATION CENTRE  
(APIC) STUDIES IN DATA  
PROCESSING SERIES

ALSO IN PAPERBACK . . .

## INTRODUCTION TO LOGIC PROGRAMMING

Christopher John Hogger

1984, 288 pp., \$46.00

ISBN: 0-12-352090-8 (Cloth)

1984, 288 pp., \$19.50

ISBN: 0-12-352092-4 (Paper)

This book is the first comprehensive introduction to all aspects of logic programming — the central formalism of the new fifth generation computers. The main themes covered are: the use of logic for representing and solving computational problems; PROLOG programming techniques and styles; data structures; specification, verification and synthesis; PROLOG implementation; impact upon programming methodology and education; knowledge-based applications; non-Von Neumann features of logic programming and fifth generation computing.

## LUCID, THE DATAFLOW PROGRAMMING LANGUAGE

William W. Wadge

and Edward A. Ashcroft

May 1985, 328 pp., \$39.50

ISBN: 0-12-729650-6

The primary objective of this book is to prove that Dataflow is a real alternative to sequential/imperative computing, and that dataflow algorithms can be expressed naturally and concisely in LUCID.

"I WHOLEHEARTEDLY RECOMMEND  
THIS BOOK TO ALL PROFESSIONAL  
FORTRAN PROGRAMMERS."

— P.A. CLARKE IN  
COMPUTER JOURNAL

## FORTRAN OPTIMIZATION

Michael Metcalf

1982, 242 pp., \$26.00

ISBN: 0-12-492480-8

This volume deals with the whole topic in a systematic fashion, and every effort has been made to include only the most up-to-date information, and to present it in a way which clearly distinguishes between the different techniques required for the various types of compiler.

# SELECTED TITLES IN COMPUTER SCIENCE

TWO VOLUMES IN  
COMPUTER SCIENCE AND  
APPLIED MATHEMATICS:  
A SERIES OF MONOGRAPHS  
AND TEXTBOOKS

## MICRO DATABASE MANAGEMENT

Practical Techniques for  
Application Development

Robert H. Bonczek, Clyde W. Holsapple,  
and Andrew B. Whinston

1984, 536 pp., \$37.50

ISBN: 0-12-113060-6

**From the Preface:** The central purpose of this book is to help readers understand the possibilities and practicalities of building application systems with database management software . . . Descriptions of leading mainframe database management systems (DBMSs) are included to allow us to put micro database management capabilities into proper perspective.

## ALGORITHM- STRUCTURED COMPUTER ARRAYS AND NETWORKS

Architectures and Processes  
for Images, Percepts, Models,  
Information

Leonard Uhr

1984, 413 pp., \$37.50

ISBN: 0-12-706960-7

This book examines the new parallel array and network multicomputers that are just beginning to be designed and built. It considers the problems of developing higher-level languages for such systems, as well as those of designing algorithm, program, data flow, and computer structure.

TWO VOLUMES IN THE  
COMPUTERS AND PEOPLE  
SERIES

## DEVELOPMENTS IN EXPERT SYSTEMS

Edited by

M.J. Coombs

1984, 272 pp., \$15.00

ISBN: 0-12-187580-6

Expert systems — automated knowledge-based problem solvers — have been demonstrated in useful performance as diagnostic and planning aids in a wide range of domains. They have not, however, been widely adopted for routine use. The papers collected in this volume report current research to resolve some of the problems blocking more widespread use.

## FUNDAMENTALS OF HUMAN-COMPUTER INTERACTION

Edited by

Andrew Monk

1984, 312 pp., \$26.50

ISBN: 0-12-504580-8

The purpose of this book is to share some of the knowledge acquired from research into Human Computer Interaction (HCI) with those at the sharp end of the design process; principally the systems engineers and programmers.

# Make Stat Magic

Now for the IBM PC/AT\*  
with hard disk

## Statistics, reports and plots happen magically with SPSS/PC™—the Statistical Package for IBM PC/XTs.\*

SPSS/PC is the most comprehensive statistical package for performing simple or complex tasks, regardless of data size. It maintains feature and language compatibility with mainframe SPSS; while optimizing for the PC environment.

Statistics range from simple descriptive to complex multivariate, including Multiple Regression, ANOVA, Factor and Cluster analysis. Loglinear and nonparametric procedures are also included.

Simple facilities allow transfer of files between

SPSS/PC and programs like Lotus 1-2-3, dBase II and SAS. A complete Report Writer, Plotting facilities and a Communications program for mainframes round out a fully integrated product.

For more information, contact our Marketing Department without further ado. And see what a little stat magic can do for you.

SPSS Inc., 444 N. Michigan Avenue, Chicago, IL 60611, 312/329-3500.

In Europe: SPSS Benelux B.V., P.O. Box 115, 4200 AC Gorinchem, The Netherlands, Phone: +31183036711 TWX: 21019.

VISA, MasterCard and American Express accepted.

## SPSS inc. PRODUCTIVITY RAISED TO THE HIGHEST POWER™

\*SPSS/PC runs on the IBM PC/XT or AT with 320K memory and a hard disk. An 8087 co-processor is recommended. Contact SPSS Inc. for other compatible computers.

IBM PC/XT and AT are trademarks of International Business Machines Corporation. dBase II is a trademark of Ashton-Tate. 1-2-3 is a trademark of Lotus Development Corporation. # Only with the new LKB Horizontal El

## Unequalled flexibility in

### READY-TO-USE GELS FOR MAXIMUM CONVENIENCE

All the owner of the LKB Horizontal Electrophoresis System needs to cover a wide range of electrofocusing applications is a supply of the popular and successful LKB Ampholine PAGplates. These allow the researcher to avoid the time and trouble involved in casting gels in the laboratory, while guaranteeing both high resolution and excellent reproducibility. As many as 96 samples can be separated simultaneously on a single PAGplate, enabling users with high workloads to spend their time screening samples instead of casting gels.

*Eight phenotypes of  $\alpha_1$ -antitrypsin are clearly identified using one of the convenient LKB Ampholine PAGplates ▼*

### ULTRATHIN GELS FOR MAXIMUM ECONOMY

Anticipating the need for less expensive electrofocusing gels, LKB developed the new UltroMould: a simple device designed to cast bubble-free gels as thin as 0.1mm in less than 30 seconds. Based on a patented sliding plate method, UltroMould is easy to use, producing perfectly accurate and uniform gels and ensuring a high standard of reproducibility. Adding UltroMould to the LKB Horizontal Electrophoresis System means that significantly less gel solution and smaller sample volumes are required, resulting in far more economical electrofocusing.

*LKB UltroMould casts bubble-free ultrathin gels in only 30 seconds, making gel casting quicker, easier and more certain ►*

### THICK GELS FOR MAXIMUM CAPACITY

Original electrofocusing techniques used thicker gels, and even today you may still wish to work this way in order to achieve higher capacity. The LKB Horizontal Electrophoresis System lets you easily cast and run Ampholine gels up to 2 mm thick, allowing much greater sample volumes to be analyzed successfully. The 2 mm thick gels are also ideal if you are new to electrofocusing and are following a procedure described in the literature.

*After the thick gel has been cast, the sample is introduced with the help of the sample application foil ►*

This is one in a series of advertisements describing the unrivalled versatility of the LKB Horizontal Electrophoresis System. For further information about analytical electrofocusing, and the many other applications of the system, send today for our brochure.

### THE LKB SYSTEM

Only LKB can offer the research scientist a complete, integrated system in which each component works with and complements all the others. Based on the new and improved Multiphor II, the system also includes a 5KV power supply, thermostatic circulator, laser densitometer and data evaluation software. In addition to the instrumentation, LKB provides a range of 18 major kits plus a complete programme of high quality chemicals, supplies and accessories, backed by the full worldwide support of the market leader in electrophoresis and electrofocusing.

LKB—the electrophoresis experts.

# electrophoresis System do you also get...

# analytical electrofocusing

## AGAROSE GELS FOR MAXIMUM POROSITY

Another of the many options available to the user of the LKB Horizontal Electrophoresis System is the application of Agarose electrofocusing gels. LKB supplies extremely pure agaroses, carefully developed for electrofocusing, and the original capillary casting method simplifies the task of producing 0.5 mm gels on GelBond Film backing sheets. Agarose is non-toxic and easy to handle and the entire analysis procedure, including casting and running, is very rapid.

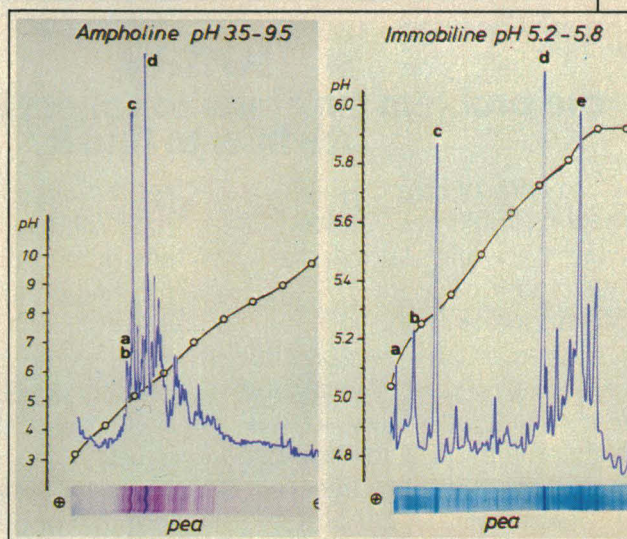

*Separating the GelBond Film from the glass plate gives a 0.5 mm agarose gel, firmly attached to its support and ready to use ►*

## IMMOBILINE GELS FOR MAXIMUM RESOLUTION

The unique LKB Immobiline System is significantly different to traditional gels in that its pH gradient is an integral part of the gel. The system is designed to allow the user to select a pH gradient as wide as 3.0 pH units, or as narrow as 0.1 pH units, anywhere in the range 3.6 to 9.5. This tailoring of the gradient to suit specific applications permits extremely high resolution to be achieved with the LKB Horizontal Electrophoresis System. Stable and reproducible linear gradients having a slope as low as 0.01 pH units/cm are possible, allowing you to separate proteins whose pI values differ by as little as 0.001 pH units.

*Comparison of traditional electrofocusing and LKB Immobiline System (courtesy of Dr A Görg et al, Technische Universität, München) ►*

**To cope with a need to collect information,  
man creates the Library at Alexandria.**

The Alexandrian Library during the Roman Empire.

## Today, the problem isn't how to collect information, it's how to find it.

In ancient Egypt, an information problem was solved when the world's knowledge was organized in the Alexandrian Library.

Today, it's no longer possible to store all needed information in a single place. How do you gather the information you need from thousands of sources?

The solution is DIALOG®, the world's largest scientific and technical databank. For over a decade we've been providing online access to scientific information.

To millions of journal articles, conference papers, technical reports, books and patents. The information you

need to do your job.

With more databases than any other online system and the most powerful software available, DIALOG pinpoints new ideas—emerging technologies, product developments, research policies, social and economic issues.

Instantly, from your desktop terminal or personal computer. With no monthly minimums or initiation fees.

To learn more about this revolutionary tool, contact DIALOG Marketing, 3460 Hillview Ave., Dept. 83, Palo Alto, CA 94304. Call 800/227-1927 (800/982-5838 in Calif.).

## LETTERS

### Sulfur Dioxide Emissions

M. Oppenheimer *et al.* (Letters, 8 Mar. p. 1154) take issue with Philip H. Abelson's conclusions (Editorial, 14 Dec., p. 1263) that action to reduce pollution in the United States would be premature, and they characterize Abelson's position as "both unconvincing and puzzling." The writers contend that "surface water acidification cannot be avoided if sulfur dioxide emissions are not reduced by one-half or more." However, Abelson's position seems entirely reasonable in light of the weight of the evidence now available and the conflicting interpretations expressed by participants in the emissions reduction issue.

The 1983 report of a National Academy of Sciences (NAS) committee (1), noted that decreasing sulfur dioxide emissions may not significantly affect the acidity of precipitation. In Environmental Protection Agency (EPA) Region 1 (New England), SO<sub>2</sub> emissions fell by 38 percent from 1965 to 1978, with no significant long-term trend in the acidity of precipitation at Hubbard Brook, New Hampshire. Similarly, in EPA Region 2 (New York and New Jersey), SO<sub>2</sub> emissions fell by 40 percent over the same period, again with no significant long-term trend in acidity (2).

Others (3) have analyzed the precipitation chemistry data for three sites from the mid-1950's and the mid-1970's. In Virginia, acidity increased by 74 percent, while SO<sub>4</sub><sup>2-</sup> fell by 3 percent. In Pennsylvania, acidity increased by 216 percent, while SO<sub>4</sub><sup>2-</sup> fell by 23 percent. In Illinois, acidity increased by 27,000 percent, while SO<sub>4</sub><sup>2-</sup> increased by 22 percent.

The relation between SO<sub>2</sub> emissions and sulfate deposition is also equivocal. In EPA Region 1, while SO<sub>2</sub> emissions fell by 38 percent, sulfate concentrations at Hubbard Brook, New Hampshire, fell by 33 percent (1). In New York, a drop of 40 percent in sulfate concentrations (1) was accompanied by an annual average drop of 2 percent in sulfate (4), which amounts to a reduction of about 25 percent over the 13-year span.

In a letter about the apparent inconsistency in opinions about the linearity of the SO<sub>2</sub>-sulfate relation, the executive director of the National Acid Precipitation Assessment Program has reported (5) the explanation agreed upon by the NAS committee and the National Laboratory Consortium (NLC). Emission-deposition relationships were said to be "nearly [linear] (i.e., proportionately

1:1) when *averaged* over at least a year and *averaged* spatially over a large half-continent sized area." He also commented that "this is a valid hypothesis based on current information which will be tested as new research yields better information. However, both parties [NAS and NLC] agreed that for smaller spatial scales and shorter time scales, the relationship may not be directly proportional. . . . In other words, linearity may apply to average deposition and yet not hold true for each receptor site of concern."

The sites of concern are largely forested mountain areas, specifically the trees, lakes, and streams in forested watersheds. The evidence increasingly points to the decaying organic layer of forest litter as the primary source of acidity (6).

Concern about the acidification phenomenon is appropriate, but if benefits for sensitive ecosystems are to be achieved, the mechanisms that operate must be clarified and quantified. The hard data now available do not support the hypothesis that major reductions of emissions will benefit the ecosystems of major concern. As successive research findings emerge, Abelson's position becomes ever more convincing and appropriate.

will now gallop off in all directions and plow up the continent of Africa with huge American tractors, scattering artificial fertilizers and pesticides as they go along. But what happens in those areas where it simply does not rain? And will African rulers allow all this intervention? People with substantial experience in high-technology agriculture are to be found in large numbers in Africa and they should be consulted. There is also a great deal of knowledge about possible increased food production in Africa. I have no doubt that American agriculture is efficient in the short run. But how good is it on a sustained-yield basis? What about the decline of irrigation farming based on the Ogallala aquifer in the United States and the increasing soil erosion all over the world, especially in Africa? How much will American-style agriculture cost in Africa, and who will pay for it? Already many Canadian and American farmers are going bankrupt because of low food prices. African rulers, with some noteworthy exceptions, have appeared to be more interested in cash crops than in food production.

Many years ago Kwame Nkrumah tried collective farming in Ghana, complete with large tractors. The effort was a disaster. There have also been attempts at collective farming in Ethiopia and Mozambique. These countries are now asking for food aid. The Soviet Union, the mother and father of collective farming, last year imported 50 million metric tons of grain. So we must conclude that there are different varieties of "high-technology" agriculture. Some work, while others are a flop.

The population of Africa was about 140 million in 1930 and is about 540 million now. Population growth is resolutely outstripping food supplies. Can we change total cultures in Africa? How will we (the West) be given this power?

### Infrastructure

In his editorial of 1 March (p. 991), Erich Bloch reports guidelines for fiscal year 1986 budget development at the National Science Foundation. Specific reference is made to science and engineering infrastructure as one of the three major priorities. Renewed concern at the NSF for the people who will advance science and engineering is laudable and already visible. Recent review of the

NSF's support for undergraduate institutions during fiscal year 1984 by a review group representing a broad spectrum of institutions and associations found that the first year of the NSF's effort to encourage and support research at these colleges and universities had proceeded quite well. Working with funding targets and through the dedicated efforts of its staff, the NSF awarded 141 grants in its Research in Undergraduate Institutions Program, 75 of which were to first-time awardees. Although the success ratio for funded proposals was less than the NSF average, review priorities were at least comparable. As a consequence of NSF encouragement a new, previously neglected, group of qualified research scientists has been brought into the mainstream. Their efforts, and the undergraduate students whom they inspire, offer renewed optimism for this nation's ability to retain research preeminence in science and engineering.

MICHAEL P. DOYLE

Department of Chemistry, Trinity  
University, San Antonio, Texas 78284

### Nitropyrenes

A minor error mars the otherwise very informative account by Eliot Marshall of the Asilomar Conference convened by the Health Effects Institute (News and Comment, 15 Feb., p. 729). In that article, 2-nitropyrene is identified as a "highly potent" carcinogen that is present in diesel exhaust and was "recently" removed from xerographic toners. Actually, 2-nitropyrene is probably not an anthropogenic chemical and thus was not present in toners. Reference should have been made to 1,6- and 1,8-dinitropyrene, which are indeed carcinogens and were removed from xerographic toners 5 years ago (H. S. Rosenkranz *et al.*, Reports, 29 Aug. 1980, p. 1039). Subsequently these dinitropyrenes, as well as 1-nitropyrene and other nitrated polycyclic aromatic hydrocarbons, have been found to be ubiquitous products of incomplete combustion processes and have been detected not only in diesel exhaust but also, for example, in fly ash, the emissions of kerosene home heaters, and grilled chicken yakitori.

# IT'S ONLY A PAPER PLANE...

But it flew 58 feet, two inches, winning in the nonprofessional category of *Scientific American's* paper airplane contest in 1967. A lot has changed since then. Real planes have traded heavy, metal parts for pieces made of layered and fibrous composite materials. And, we assume, the paper plane buffs of the world have been tinkering too, folding along different lines and perhaps learning a few tricks from the nonpaper engineers. So *Science 85* magazine, Seattle's Museum of Flight and the Smithsonian Institution's National Air and Space Museum announce The Second Great International Paper Airplane Contest of the Century.

## THE EVENTS:

Time Aloft  
Distance  
Aerobatics  
Aesthetic Design (all these planes must fly at least 15 feet or three seconds)

## THE CATEGORIES:

- Professional—teachers and graduate students in aeronautics and related fields as well as engineers, designers, and others employed in the aerospace industry
- Nonprofessional—everyone else
- Junior—entrants under 14 years old, eligible for time and distance events only (parent-child teams must enter under the professional or nonprofessional categories)

## THE JUDGES:

A high-flying panel will test your design in the wide open spaces of a Boeing aircraft hangar in Seattle.

—Michael Collins, aerospace consultant and former Apollo astronaut

—Dennis Flanagan, editor emeritus of *Scientific American*

—Ilan Kroo, NASA aerodynamics designer

—Yasuaki Ninomiya, designer of Whitewings toy airplanes

—Sheila Widnall, MIT aerodynamics engineer

## THE AWARDS:

THE BERNOULLI MEDALLION for paper flight goes to first-, second-, and third-place winners in each event. First-place winners will be flown, all expenses paid, to Seattle to receive their awards and fly their planes during a special ceremony at the Seattle Kingdome in June. Some of the winning designs will be published in the September issue of *Science 85*.

## THE RULES:

All entries must be made only of paper. Glue and cellophane tape may be used only for bonding purposes, not to add weight. Paper lamination and paper reinforcement *is* allowed.

Your entry is your airplane, properly folded, with your name, address, phone number, and any special throwing instructions written clearly on the plane. Also write which event you would like to enter (only one event per plane) and whether you are in the Professional, Nonprofessional, or Junior group. Planes missing any of the required information will be disqualified.

Entries should be sent to: International Paper Airplane Contest, Museum of Flight, 9404 E. Marginal Way South, Seattle, Washington 98108.

Entries must be received by May 1, 1985. All entries become the property of *Science 85*, the Museum of Flight and the National Air and Space Museum. By submitting their designs, entrants agree to allow *Science 85*, the Museum of Flight and the National Air and Space Museum to publish them and use them in subsequent promotional material. Employees and relatives of employees of *Science 85*, the Museum of Flight, the National Air and Space Museum, and AG Industries/Whitewings are not eligible.

SPONSORED IN COOPERATION WITH AG INDUSTRIES/WHITEWINGS AND THE NATIONAL SCIENCE FOUNDATION

MUSEUM OF FLIGHT  
SCIENCE 85  
NATIONAL AIR AND SPACE MUSEUM

DEADLINE:  
MAY 1, 1985

# Did you say "QVECs"?

Try it yourself. Take any half-dozen well-informed staff members and say knowingly, "Of course, you've heard about these new QVECs." You'll be treated to at least five different versions of precisely what QVECs are *not*.

What no one will admit to—especially at the Dean's annual reception—is that they have no idea whether QVECs are a cream-filled French pastry or the focus of the latest microchip research.

A pity. Because for many of your people, TIAA-CREF's QVECs (short for *Qualified Voluntary Employee Contributions*) represent an intelligent, convenient and highly competitive *tax-deferred* alternative to an IRA.

In fact, if any members of your staff are considering buying IRAs, your institution should be offering them TIAA-CREF QVECs—for these important reasons.

- ☐ QVECs provide a lifetime income, unlike most IRAs.
- ☐ QVECs currently offer attractive rates of return.
- ☐ QVECs offer the investment choice between two funds—TIAA and CREF.
- ☐ QVECs are portable—when staff move to another institution that offers QVECs, their QVECs can go right along.

So sooner or later you can expect to be interrogated on the subject of QVECs by the head of business studies or the rising star of the history department. And you'll want to have the facts at your command.

We can provide them. For a full briefing, simply return the form below or write us at QVECs, TIAA-CREF, 730 Third Avenue, New York, New York 10017. Then, when the subject comes up, as it's sure to do, you'll be ready to set the record straight.

## **QVECs. The educated alternative to an IRA.**

ASYST multiple windows permit side-by-side comparisons. The two-dimensional FFT routine, shown, is one of the many built-in functions.

With ASYST, data acquisition and analysis routines can be combined to create powerful, menu-driven functions.

Least squares, polynomial, exponential, and logarithmic curve fitting routines fully integrate with other ASYST capabilities.

ASYST integrates analysis functions with graphics. On-screen cursors allow interactive selection of curve segments.

# ASYST Scientific Software.

## Acquisition, analysis and graphics capabilities turn your IBM PC into a powerful workstation.

ASYST and your IBM PC, XT,™ AT, or compatible put you in direct control. You can reduce data while collecting—displaying results as you proceed. Now for the first time you can pull information through the analytical process without timesharing delays or software bottlenecks. See why "scientists and engineers will rejoice at having such a versatile tool to turn their PCs into minis"—PC Magazine.

**Get the speed and precision of a minicomputer—at a fraction of the cost.**

- ASYST fully utilizes the PC's 8087 coprocessor for precision exceeding that of other micros—and many minis and mainframes.
- A 1024-point FFT with ASYST/IBM PC takes less than 3 sec. An optimum performance custom routine on a DEC 11/23 + minicomputer with PPF 11™ took 2 sec.—at five times the price.

**ASYST is composed of three separate, but fully-integrated, modules:**

**Module 1: System/Graphics/Statistics** establishes the environment. Includes data representation and storage; arith-

metic, trigonometric, hyperbolic and other mathematical and statistical functions; direct graphics output and display; array manipulation; control of vectors and matrices; automatic plotting; file manipulation; programming control structures; and a built-in text editor.

**Module 2: Analysis** reduces and analyzes data. Includes Eigenvalues, Eigenvectors, polynomials, least squares approximations, curve fitting, convolutions, integration, differentiation, smoothing, and Fast Fourier Transform.

**Module 3: Data Acquisition** allows interfacing with laboratory instruments. Commands such as "A/D.IN" allow data communication with standard interface boards. Includes A/D and D/A conversions, digital I/O, timing, and triggering. Commands can be combined for customized automatic acquisition and control.

- Module 1 works alone—or with either of the other two modules—allowing you to tailor the system to your specific needs.
- All functions are always available. You never have to leave the system to access any of its capabilities.

**Built-in routines. Full programmability.**

- Use straightforward, pre-programmed commands such as XY.DATA.PLOT and ARRAY.EDIT.
- Combine and modify commands to extend the system for your custom applications.

**Take advantage of our 30-day no-risk offer. Call (800) 348-0033, today!**  
In New York state, call (212) 702-3241.

# Every R&D manager finds a few minutes each day to think about his new product and FDA approval.

When it comes to toxicology testing for the FDA, there are plenty of things that can keep you up nights. Things that can spell the difference between a successful product introduction or millions in lost sales. Like late test results. Repeating studies. Spending over budget.

At Bio/dynamics we've got the people, facilities, track record, and knowledge of regulatory requirements to assure that your toxicology tests will be done right the first time. On time. At a fair price.

For example, every single one of our toxicology study directors is board-certified and a member of the Society of Toxicology. That's why every test (acute, subchronic or chronic) is directed by a certified toxicologist. And our pathology staff is also 100% board-certified or board-eligible with many years of veterinary pathology experience.

As for performance, we've never had a test rejected by the EPA/FDA because of our error.

Our facilities are also unique to the industry. They've been built from the ground up just to do the job they do. And not simply remodeled from something that existed before.

So before you initiate your next toxicological testing program, give us a call. We're here to help eliminate those things that can keep you from getting the good night's sleep you deserve.

For information, contact Dr. Gary Benke at  
(201) 873-2550, P.O. Box 43, Mettlers Road,  
East Millstone,  
New Jersey 08873.

# THE FPS 64-BIT FAMILY: CONSIDER WHY THE MOST ACCESSIBLE SUPERCOMPUTERS MAY BE THE FASTEST WAY TO DO YOUR JOB.

The new 38 MFLOPS FPS-264, with 64-bit accuracy, large storage, and architecture refined to achieve a high percentage of its peak speed. For many applications, it can provide half the performance of the most popular supercomputer. Its moderate price and exceptional support liberates supercomputing from the realm of major corporate investment and puts it within practical reach of departments and teams.

**H**ow fast can you get a supercomputer up and running is as important as how fast it runs. When you look beyond peak computing

speeds to the practical realities of compute-intensive analysis and simulation, odds are that nothing else can take your job from start to finish as fast as the FPS

64-bit supercomputer family. Here's why:

- 1. FPS protects and utilizes your existing software resources.** FPS offers you an exceptional, proven software tool set. If your investment in FORTRAN is typical, the FPS Compiler will alone be a compelling advantage.
- 2. More applications software than for any other comparable com-**

**puter.** Compare quantity and quality of compatible third party software packages—for structural analysis, circuit design, reservoir simulation, fluid flow analysis, chemistry and much more—and the FPS advantage widens.

- 3. The FPS 64-bit family makes supercomputing speeds affordable at the department level.** Even teams with remote access to Crays® and Cybers™ are

# A Supercomputer you can REALLY Afford.

Supercomputer number crunching power in a compact package—that's the new MAP-6420.

First CSPI set the goal of making 64-bit double-precision computation truly accessible to scientific and engineering users in laboratory environments. Then we enhanced computation and condensed array processor size and cost to produce the MAP-6420. Small in size—up to 16 megabytes of memory

will fit in a 21-inch rack-mountable chassis. Small in price—our 4 megabyte unit starts at a low \$100,000. And packed with computational muscle—MAP-6420 speeds up your VAX by a factor of 5 to 15, and at the same time, frees it for other tasks, so the overall response time for every VAX user is improved.

The MAP-6420 has the configurational range to handle

## At \$100,000\*, 64-bit Scientific Number Crunching is NOW Accessible.

your large scale applications. Its low component count yields high reliability and offers the benefits of low power, low cooling, and minimal space requirements.

For users who can program in FORTRAN, high performance is virtually assured. We planned MAP's hardware around its FORTRAN compiler so the programs the user writes will deliver the performance paid for. Parallel units process algo-

gorithms efficiently, even if they're not vector-oriented. In addition, we offer a Scientific Subroutine Library of 120 optimized math functions. Uniform, versatile performance delivered from FORTRAN—that's MAP-6420!

Discover how you can benefit from MAP-6420 number crunching. Call toll free 1 800 325-3110.

# F S U P E R C O M P U T E R S

The FPS optimizing FORTRAN-77 Compiler lets you easily adapt code to FPS' pipelined architecture in a form that is nearly as efficient as hand-coded assembly language. With extensions for asynchronous I/O and for enhancing compatibility with other compilers, it is one of most comprehensive tools of its kind.

likely to find that the advantage of immediate, local access is well worth the sacrifice of standing in line for the "fastest" machines.

System prices start at \$300,000 (U.S.) for the 11 MFLOPS FPS-164. The new 38 MFLOPS FPS-264, starting at \$640,000,

achieves 4-5 times the speed of the FPS-164 on many applications programs. The multiple parallel processing units and peak 341 MFLOPS of the FPS 164/MAX can run many matrix computations faster than supercomputers, for less than one-tenth the price.

## Family Specifications

	FPS-264	FPS-164/MAX	FPS-164
Peak speed, MFLOPS	38	33-341	11
Dynamic range	$2.8 \times 10^{-309}$ to $9.0 \times 10^{+307}$	$2.8 \times 10^{-309}$ to $9.0 \times 10^{+307}$	$2.8 \times 10^{-309}$ to $9.0 \times 10^{+307}$
Logic format	64 bits	64 bits	64 bits
Main memory capacity	4.5 MWords	15 MWords	7.25 MWords
Maximum disk storage capacity	16 Gbytes	3 Gbytes	3 Gbytes
Precision	15 decimal digits	15 decimal digits	15 decimal digits
Vector registers	4 x 2K	124 x 2K (max.)	4 x 2K
Scalar registers	64	184 (max.)	64
Host interfaces	IBM, DEC	IBM, DEC, Sperry, Apollo	
Program Development Software	FORTRAN Compiler, Overlay Linker, Assembler, Object Librarian, Interactive Debugger.		

## Family Performance Measures

	FPS-264	FPS-164/MAX	FPS-164
		15 accelerators	1 accelerator
Peak MFLOPS	38	341	33
Peak MOPS	190	1705	165
Peak MIPS (Multi-instruction parcels)	19	5.5	5.5
Typical MFLOPS, LINPACK Benchmark	9.9	20.0	6.0
Whetstones (64-bit)	20,100	5800	5800
1000x1000 matrix multiply, seconds	53	10	66
\$K/MFLOPS (system price/peak speed)	\$16.8K	\$2.5K	\$12.3K
			\$27.1K

**4. The FPS family is expandable. Proven dependable. Well-supported. In other words, a safe, farsighted investment.** You can upgrade your existing FPS computer, or evolve from one level of performance to another, with minimal disruption. And you can bank on a record of reliability that begins with exhaustive manufacturing testing and extends to our 21 field office service facilities worldwide.

# The Computer Issue

I learned the other day that wind tunnels are essentially obsolete for testing airplane designs. Modern understanding of aerodynamics and the ability to alter multiple variables of wind, size, airflow, and so on by computer mean that structural designs can be more efficiently examined by computer than by old-fashioned experiments. My immediate reaction was to travel by train. Although I have bowed to the onward march of modern science and continue to use airplanes, this development indicates the enormous, sometimes unknown, change in all of our lives occasioned by the computer. In this issue some ways in which computers are being used are described by authors recruited for *Science* by Philip H. Abelson.

The development from calculating machine to computer involved many scientists and engineers among whom Alan Turing and John von Neumann are usually mentioned. It is instructive to realize that since von Neumann's studies in the 1940's, computers have increased in speed by a factor of 1 billion and have become cheaper per computation by a factor of 10 million. Larry Smarr describes a problem in which there are 25,600 variables at each step and a single experiment makes use of at least 10,000 steps. The solution involves 1.25 billion numbers. Problems of this complexity could not even be planned, let alone solved, just a few years ago. This increase in complexity has, moreover, altered the thinking of scientists. Old-fashioned types, like me, have a feeling that the true answer to a scientific problem lies in an analytical equation; numerical calculations are only approximations to the real answer. Modern computer experts are frequently dealing with problems with so many variables that the true visualization requires a numerical solution; the analytical equation is only an approximation.

These articles also reveal a second change in our lives. The handheld pocket calculator now lies on laboratory benchtops, so cheap that theft is no longer considered a serious problem, and personal computers are being given to college students at the beginning of their college careers. What will happen to students, as M. Mitchell Waldrop asks, if the ease of push-button access to information eliminates the normal interactions occasioned by meeting at the library or attending classes? What will happen to the character of a student who has never had to wait in line for a book?

Entire sciences are being changed, as described in the article by E. J. Corey *et al.* on the use of computers to design organic syntheses. Will the computer really replace the cerebellums of the great organic chemists with their incredible storehouses of individual reactions? Similar revolutions may be in store for the humanities, agriculture, and economics, in which the ability to examine many variables and to have access to large amounts of data will change problem-solving.

Communication between scientists and the education of students will also be affected. Knowledge of electronic databases will be as important as keeping up with the latest journals. *Science*, for example, will soon add software reviews to the book reviews. Teaching may be enhanced by machines and allow students to progress at their own pace.

Although the enormous power of computers brings joy to many, this power can have a destructive element as well. The elimination of routine jobs by computerization will have a fundamental effect on society. It is not enough to say to individuals who are displaced that a new productivity will allow you to be supported all your lives. Humane understanding and a generous effort must motivate those who will benefit from these wonderful machines to help those who are displaced by them. The promise of computers may best be realized in approaching solutions to that most complex multivariate problem, the establishment of a fully productive and satisfying society.

For the good of society, we may have to enact laws to protect some endangered species. Already computers are being used to design musical scores. When they start writing editorials, they will have gone too far.

—DANIEL E. KOSHLAND, JR.

# LABTECH NOTEBOOK™

## Lab Automation with no hassles

When you spend your time in a lab, you want to spend it performing experiments, not programming computers.

With this simple fact in mind, Laboratory Technologies has developed LABTECH NOTEBOOK™ — a remarkable program that eliminates programming. Now you can perform real time data acquisition, process control and analysis on your PC without wasting time and effort writing experimental programs.

LABTECH NOTEBOOK collects data directly from your instruments, analyzes it, and produces charts, graphs and printouts in far less time than you might have spent just writing a simple program. **It also integrates with Lotus 1-2-3™ and Symphony™ for enhanced data manipulation, graphics, modeling, and even word processing.** Just imagine what it would be like to go from raw data to final report in a matter of minutes instead of days or weeks. With LABTECH NOTEBOOK you can.

Don't waste any more time experimenting with your PC. LABTECH NOTEBOOK can teach it everything it needs to know to let you work smarter and faster than ever before. After all, isn't that what computers are for?

LABTECH NOTEBOOK requires Acrosystems, Burr-Brown, Cyborg, Data Translation, GE Datel, Keithley DAS, Metrabyte, National Instruments, Taurus or Tecmar hardware. LABTECH NOTEBOOK runs on the IBM PC®, XT, AT; COMPAQ, COMPAQ Plus; Data General One; and others.

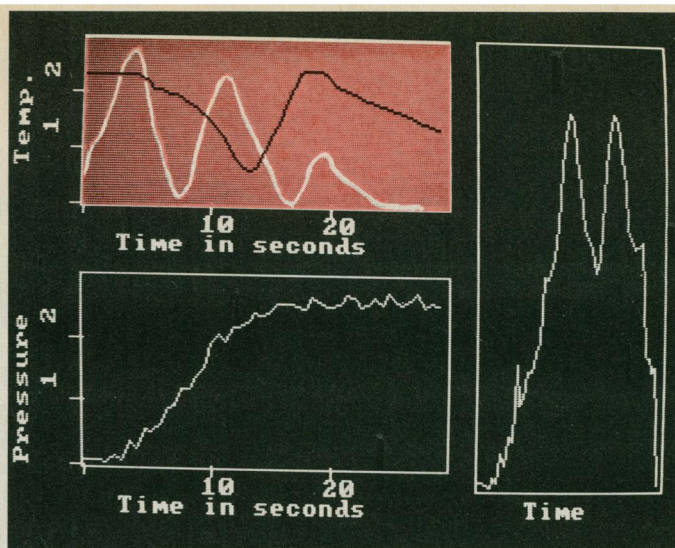

Call or write Laboratory Technologies today for a **30-day free trial** of LABTECH NOTEBOOK or to request more information.

*Real time multitasking turns PC into an electronic chart recorder/data logger.*

*Import data files automatically into Lotus 1-2-3 spreadsheets for data analysis and manipulation.*

*Fit experimental data to complex theoretical models with powerful, user-friendly curve-fitting.*

**While the others  
stood still, Sartorius  
pushed technology  
beyond the limit.**

# New Sartorius 1712. The first fully automatic analytical balance.

The first with one-finger, up-front operation.  
The first with one-finger electronic calibration.  
The first with no mechanical controls.

Sartorius introduces the new Model 1712—a balance that's way ahead of all the rest. It combines state-of-the-art electronics with a trim, streamlined design to create a whole new generation of balances. With the 1712, complicated procedures and clumsy mechanical controls are ancient history. Now, by a mere finger touch, Sartorius brings you to the forefront of weighing technology.

## The simplest weighs possible.

All functions of the 1712 are controlled by a touch-sensitive panel on the front of the balance. To weigh, just press TARE, load the sample and, in seconds, your result appears clearly on the bright  $\frac{7}{8}$ -inch readout. Calibration, programming, and weighing range selection are just as easy.

To celebrate our 25th anniversary of manufacturing electronic balances, the Sartorius 1712 Silver Edition will be available for a limited time only.

No knobs, no levers, no side controls.  
Everything is up front.

Analytical weighing range, with 0.1 mg readability.

Semi-micro weighing range, with 0.01 mg readability.

### Really two balances in one.

The 1712 can handle more of your weighs because it has two distinct weighing ranges: an analytical range to 160 g and a semi-micro range to 30 g. But it's really two balances in one, because you calibrate it and adjust its operating parameters—digital filter settings, stability ranges, display format, and zero-tracking—separately and independently for each weighing range. You can also expand the 1712's extensive capabilities by adding optional (RS232C) data outputs.

### All weighs precise with fully automatic calibration.

Because of its exclusive dual-range calibration system, the 1712 gives you accuracy and precision that no other multirange balance can compete with. Two separate weights for two separate weighing ranges assure accurate results every time. The 1712 also guarantees stable readings by filtering out interfering disturbances, and it lets you adjust operating parameters with front-panel programming to suit your lab environment. And if a problem arises, the unique AutoCheck feature of Model 1712 will locate it and tell you where it is.

Ergonomically designed for comfort and convenience.

The first fully automatic, analytical balance. Total control from the front panel. And two completely independent balances in one. But there's even more to the 1712. A larger weighing chamber and lower platform for greater user comfort and convenience. An aerodynamically designed pan that resists mild air currents and is big enough to accommodate almost any vessel. Let Sartorius show you the weigh of the future. Call for a demonstration today.

# More weighs to win you over.

With the 1712 leading the way, Sartorius also offers you the 1702, with classic 200 g weighing range, and the 1773, featuring analytical weighing to 300 g. Both are fully automatic and include the same convenient features as the 1712. For more routine operations and educational applications, consider Model 1801 or 1872.

These balances are economical and compact but never short on performance. And all Sartorius 1700 and 1800 series analytical balances give you the confidence and ease of use that comes only from complete up-front control and the most advanced weighing technology in the world.

Technical Data	1702 MP8	1712 MP8	1773 MP8	1801 MP8	1872 MP8
<b>Weighing range</b>	0-200 g	0-30/160 g	0-100/200/300 g	0-110 g	0-60/100/160 g
