

American Association for the Advancement of Science

Science serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

Publisher: Alvin W. Trivelpiece

Editor: Daniel E. Koshland, Jr.

Deputy Editors: Philip H. Abelson (*Engineering and Applied Sciences*); John I. Brauman (*Physical Sciences*)

EDITORIAL STAFF

Managing Editor: Patricia A. Morgan

Assistant Managing Editor: Nancy J. Hartnagel

Senior Editors: Eleanor Butz, Ruth Kulstad

Associate Editors: Martha Collins, R. Brooks Hanson, Barbara Jasny, Katrina L. Kelner, Edith Meyers, Phillip D. Szuroni, David F. Voss

Letters Editor: Christine Gilbert

Book Reviews: Katherine Livingston, *editor*; Deborah F. Washburn

This Week in Science: Ruth Levy Guyer

Contributing Editor: Lawrence I. Grossman

Chief Production Editor: Ellen E. Murphy

Editing Department: Lois Schmitt, *head*; Mary McDaniel, Barbara E. Patterson

Copy Desk: Joi S. Granger, Beverly Shields, Anna Victoreen, Barbara Wittig

Production Manager: Karen Schools

Assistant Production Manager: James Landry

Graphics and Production: Holly Bishop, James J. Olivarri, Eleanor Warner

Covers Editor: Grayce Finger

Manuscript Systems Analyst: William Carter

NEWS STAFF

News Editor: Barbara J. Culliton

News and Comment: Colin Norman, *deputy editor*; William Booth, Mark H. Crawford, Constance Holden, Eliot Marshall, Marjorie Sun, John Walsh

Research News: Roger Lewin, *deputy editor*; Deborah M. Barnes, Richard A. Kerr, Jean L. Marx, Leslie Roberts, M. Mitchell Waldrop

European Correspondent: David Dickson

BUSINESS STAFF

Business Staff Manager: Deborah Rivera-Wienhold

Classified Advertising Supervisor: Karen Morgenstern

Membership Recruitment: Gwendolyn Huddle

Member and Subscription Records: Ann Ragland

Guide to Biotechnology Products and Instruments: Shauna S. Roberts

ADVERTISING REPRESENTATIVES

Director: Earl J. Scherago

Traffic Manager: Donna Rivera

Traffic Manager (Recruitment): Gwen Canter

Advertising Sales Manager: Richard L. Charles

Marketing Manager: Herbert L. Burklund

Sales: New York, NY 10036: J. Kevin Henebry, 1515 Broadway (212-730-1050); Scotch Plains, NJ 07076: C. Richard Callis, 12 Unami Lane (201-889-4873); Chicago, IL 60611: Jack Ryan, Room 2107, 919 N. Michigan Ave. (312-337-4973); San Jose, CA 95112: Bob Brindley, 310 S. 16 St. (408-998-4690); Dorset, VT 05251: Fred W. Dieffenbach, Kent Hill Rd. Information for contributors appears on page XI of the 18 December 1987 issue. Editorial correspondence, including requests for permission to reprint and reprint orders, should be sent to 1333 H Street, NW, Washington, DC 20005. Telephone: 202-326-6500.

Advertising correspondence should be sent to Tenth Floor, 1515 Broadway, NY 10036. Telephone 212-730-1050 or WU Telex 968082 SCHERAGO.

Storage of Spent Nuclear Fuels in Nevada

The thousand pages of the recently enacted comprehensive budget bill contained language designating Nevada as the prime candidate to host a spent nuclear fuel deposit site (*News & Comment*, 1 January, p. 15). The mechanism by which the choice was implemented is controversial, but the decision was a good one.

The Yucca Mountain site is located in a desert region in southern Nevada. The area is owned and guarded by the federal government. A large number of aboveground and underground tests have been conducted about 15 miles away, depositing enormous amounts of plutonium and fission products. Wells located within a quarter-mile from shot holes have been monitored by the Environmental Protection Agency. Neither notable amounts of fission products nor above-regulatory limits of tritium have been detected. The absence of lateral movement of fission products is partially related to the hydrology of the region. Annual rainfall is on the order of 6 inches. With the exception of storm flow into dry lakes, much of the moisture is dissipated by evapotranspiration. The distance down to the water table is about 2000 feet. Flow in the liquid below the water table (very slow) is toward Death Valley, about 50 miles to the west.

When fuel assemblies are removed from nuclear reactors, they essentially cease to undergo fission, but decay of fission products continues to produce much radiation and heat. In practice, the spent assemblages are immersed in pools of water which provide shielding and cooling. After a year in the pool, short-lived nuclides such as the 8-day iodine-131 have disappeared; after 10 years, the radiation is only a small fraction of that originally present; the heat production in a typical spent-fuel assemblage containing 461 kilograms of uranium has dropped to 550 watts. However, potentially dangerous amounts of radioactivity remain—for example, the 29-year strontium-90 and the 30-year cesium-137. In the early time span beyond 10 years, heat production diminishes with a half-life of about 30 years.

Burial of fuel assemblages would provide shielding against radiation, but emission of heat would continue. It is this heat that makes burial in holes drilled in silicate rocks in the saturated zone suspect, for the heat would induce convective motion of hot water with accompanying corrosion. In contrast, the relatively dry environment above the water table would be comparatively free from corrosive effects. Archeological finds of ancient delicate objects of both organic and inorganic composition testify to the benign influence of dry environments on their preservation.

At the proposed location of burial in welded tuff at Yucca Mountain, uncertainties remain, such as effects of heat on the containing rock. In addition, there is some possibility of unexpected tectonic events. However, hazards in Nevada seem small in comparison with those that already exist elsewhere. Today more than 100 nuclear power reactors have been operating at 60 locations in about 30 states. Nationwide, they are the energy source of about 18 percent of the nation's electricity, and in some states account for more than half the electricity. Even if use of nuclear power were stopped, the problem of disposing of spent fuel would remain. Maintaining the spent fuel indefinitely in the many present locations near rivers or other bodies of water would multiply the risk of a future crisis.

The current legislation provides for further studies of the Nevada site at a cost estimated at more than a billion dollars, though the region has already been studied exhaustively by the U.S. Geological Survey and National Laboratories. The next phase of investigation will probably include excavation of tunnels into Yucca Mountain. The study should include emplacing and monitoring the effects of a limited number of spent fuel containers. A highly instrumented experimental facility that included retrieval capability could safely produce information that would permit design of a large-scale burial site.

Procedures for and politics of the disposal of nuclear waste both here and abroad are the subject of a scholarly study by Luther J. Carter.* His book and articles were a factor in the congressional action selecting the Nevada site for further study.—PHILIP H. ABELSON
