The first step in successful amino acid analysis.

First, we need to talk. But not about model numbers and purchase orders.

We need to talk about what you want and need. About how you prefer to run your laboratory — philosophies, methodologies and procedures.

At first, you'll do most of the talking, while we listen. And learn. Then — and not until then — we'll recommend the best answer for your particular analysis needs.

You may need the superior quantitation and reproducibility of the classical ion exchange technique. Or the speed and sensi-

tivity of reversed phase. We offer them both.

For the flexibility of HPLC, we offer System Gold™, the Personal Chromatograph. And the System 6300 dedicated ion exchange analyzer for physiological and diagnostic applications.

Whichever your choice, we provide proven methods, too. Complete and *guaranteed*.

You see, we've been involved in automated amino acid analysis since Moore, Stein and Spackman pioneered it in 1958. So you can rely on us for in-depth applications and technical support. Anytime.

All the time.

That's why you can trust our recommendation. But we won't recommend a thing until we sit down and talk. And listen.

Take the first step in successful amino acid analysis. Contact your local Beckman office in major cities worldwide. In the US, call 800/742-2345.

Beckman Instruments, Inc., Altex Division, 2350 Camino Ramon, P.O. Box 5101, San Ramon, California 94583.

- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER Adult brown wheat mite, *Petrobia latens* Muller (body size about 0.5 millimeter). This spider mite species transmits the causal agent of a unique virus-like disease of barley. Although the disease is currently known to be confined to Montana and contiguous areas in Canada, the mite is distributed throughout the world and therefore presents a threat to other barley-producing regions. See page 1188. [Nancy L. Robertson, Montana State University, Bozeman, MT 59717]

Preparing DNA?

Single step purification

QIAGEN disposables transform cumbersome daily nucleic acid preparations into an easy, timesaving and inexpensive job. Picogram to milligram amounts of plasmid DNA, λ -DNA, genomic DNA or RNA can be directly isolated and purified from cleared cell lysates in one step due to QIAGEN's extended separation range (see fig.).

QIAGEN-tips and -packs, which fit on conventional pipettes or syringes, contain an anion-exchange resin, patented to DIAGEN, for solid phase extraction of nucleic acids. Expensive equipment such as ultracentrifuges, HPLC/FPLC™ or reagents like CsCl and phenol are no longer required.

Very high purity, excellent yields and superior biological activity of nucleic acids are routinely achieved in 10 minutes:

1. Adsorb the lysate to QIAGEN.
2. Wash away impurities.
3. Elute the desired nucleic acid.

QIAGEN

Biological activity

The quality of QIAGEN purified nucleic acids has been tested with more than 50 different restriction endonucleases, several polymerases, DNA ligases, phosphatases, kinases, and reverse transcriptases. Outstanding efficiency was obtained in all cases.

tips

QIAGEN-tip 5 and QIAGEN-tip 20 are pre-packed pipette tips, with a capacity of 5 and 20 μ g of nucleic acids respectively, which fit on variable volume pipettes. The entire procedure is performed simply by pipetting the appropriate solution in and out.

packs

QIAGEN-pack 100 and QIAGEN-pack 500 are small cartridges which fit on disposable syringes. The binding capacities are 100 and 500 μ g of nucleic acids respectively.

tubes

QIAGEN-tube 20 is an Eppendorf™ tube containing resin sufficient to adsorb 20 μ g of high molecular weight genomic DNA (50-200 kb) in a simple and gentle batch procedure.

For free samples and application protocols contact DIAGEN.

This Week in SCIENCE

Engine design

CAN performance and durability of internal combustion engines of cars, trucks, and tanks be improved (page 1157)? New impetus has been added to this pursuit because of recent concerns about air pollution and declining domestic production of petroleum-based fuels. Zucchetto *et al.* discuss how new ceramic materials and various new technologies might be applied to improving engine efficiency. One area of interest has been in construction of low heat rejection engines (to reduce heat loss); such engines might have special pay-offs for combat vehicles. The United States has been slow in comparison with other countries (notably Japan and countries of the European Economic Community) in researching and developing new engine technologies; U.S. efforts will have to be revved up and better coordinated if the United States is to contribute to, compete in, and benefit (economically and in terms of national security) from advanced engine technologies and their expected spin-offs.

Ion channels

PROTEINS that conduct ions across membranes are called ion channels (page 1177). They typically consist of several homologous domains. Subunits form alpha helices with polar and apolar faces, polar faces are thought to line up to form hydrophilic patches, and patches align into ion-conducting pores. Lear *et al.* describe three synthetic ion channel proteins made up solely of two amino acids, leucine (for the apolar face) and serine (for the polar face). Peptides with 21 amino acids could span a lipid bilayer membrane and conduct ions; a shorter peptide could not. The two 21-amino acid peptides differed in only one amino acid per heptad subunit but had different conducting properties. In addition, pore diameters (inferred from conductance measurements) and multimer arrangements (inferred from models) differed. The most favorable conformation and

packing arrangement predicted for each synthetic peptide matched well its observed properties. Principles deduced from these studies may be applicable to the design of channels that could be of biologic usefulness.

Brewing troubles

MALTING barley-producing areas of Montana and Canada have been hit by a disease that is reaching epidemic proportions (page 1188). The disease was noted first in Montana in 1982 in one barley field. Robertson and Carroll report that large virus-like particles transmitted by brown wheat mites (cover) are associated with the disease. The disease is unusual in both its virus and its vector: plant viruses are typically smaller than those found in the diseased barley plants (some of which, like animal viruses, are over 4000 nanometers long), and the brown wheat mites have not previously been known to be vectors of pathogens. The particles are transmitted by way of the mite ovaries to the eggs; eggs appear to serve as overwintering hosts for the pathogen. A combination of severe drought conditions between 1983 and 1986 (the mites are dry weather pests) and tremendous expansion of the barley acreage during those years appears to have contributed to the spread of this disease.

Predator-prey reversal

IN summer, dry holes in trees in western North America provide a home for mosquito eggs (of *Aedes sierrensis*) and protozoan cysts (of *Lam-bornella clarki*); when the holes fill with water during the rainy season, dormant eggs hatch into mosquito larvae and dormant cysts produce free-swimming ciliates (page 1193). The mosquito larvae feed on *L. clarki* and other protozoa in the water and also release into the water a factor that transforms free-swimmers into parasites. Thus, rather quickly, free-swimming ciliates are depleted. The parasitic protozoa then

form cysts on the mosquito larvae, bore inside, and cause death; with killing, more parasites are released that can encyst on, enter, and kill other larvae. Washburn *et al.* speculate that this unusual reversal of the predator and prey relation, though induced by the mosquito, might have evolved as a way of preserving the protozoa. Because this relation can dramatically deplete mosquito populations, *L. clarki* might be an effective biologic agent for controlling mosquitoes. The system is one in which stages in and inducers of protozoan morphogenesis can be followed.

Retinal cells

AN unusual morphology characterizes a subset of cat retinal cells in which the neurotransmitter dopamine accumulates (page 1196). When both dopamine and a second substance (a monoamine analog) are injected into eyes of anesthetized cats, the dopamine-accumulating (DA) amacrine cells emit a distinctive bright green fluorescence. Cells can be detected in live retinas in an *in vitro* preparation and can then be injected with a stain that permits detailed morphologic analysis. These DA amacrine cells have several thick dendritic branches radiating outward; each branch tapers to give rise to a thin axon-like projection extending several millimeters farther. The projections are long and have many probable synaptic contacts with other amacrine cells. Dacey speculates that the long processes may function like axons, may give rise to action potentials, and may contribute to long-range interactions in the retina.

The bottom lines

The light-addressable potentiometric sensor can simultaneously measure pH, redox potentials, and transmembrane potentials; applications of this miniaturized device may include use as a biosensor and as a monitor of chemical and physical changes in enzyme-linked immunochemical assays (page 1182).

AMBIS screen image of 2-D gel analysis of ^{35}S -labeled whole cell proteins from murine Swiss 3T3 fibroblasts. Number in second box from bottom of screen, 1491, indicates quantitation of radioactivity in calmodulin. Courtesy of Herbert L. Cooper, National Cancer Institute.

You're Looking at the Demise of Autoradiography.

Introducing Instant Quantitation with the AMBIS Radioanalytic Imaging System.™

Long exposures to X-ray film, scraping radioactive spots and analyzing dubious numbers from densitometry are no longer necessary evils. Because we've developed the only radioanalytical imaging system which performs 2-D imaging and counting of radioisotopes simultaneously, with resolution of 0.8 mm or better. AMBIS detects radiation directly — through gas ionization, like a Geiger counter. Then it displays a 2-D image of detected activity and quantitates instantly. This "firsthand" quantitation makes reliable results a certainty.

Twenty Times Faster Than Autoradiography.

AMBIS dramatically improves your throughput by delivering results in 30 minutes instead of 16 hours. Or for samples not quite so hot, AMBIS delivers in a few hours instead of a week.

Superb Sensitivity for ^{32}P , ^{35}S , ^{14}C . . .

AMBIS gives you superb sensitivity of 5 dpm for ^{32}P , ^{35}S , and ^{14}C . And you can detect other isotopes, including ^{125}I , ^{131}I , ^{59}Fe , ^{111}In , ^{90}Y , ^{67}Ga , etc. AMBIS is ideal for a wide range of applications, from nucleic acid blots and TLC to protein analysis and tissue sections.

New Tools for Data Processing.

AMBIS computerized imaging and versatile software tools create new possibilities. Instant quantitation

is just the beginning. Counts are stored on hard disk, so data can be reanalyzed at any time. Molecular weights are computed automatically. Different samples can even be normalized and compared.

Call 800-88-AMBIS; (619) 571-0113 in California to see how AMBIS instant quantitation can benefit you.

Need for Long-Range Energy Policies

Energy has not had much attention lately, but it is a matter that should be under continuing high-level consideration. The National Academy of Engineering has chosen to emphasize the importance of the topic. For the inaugural symposium of the prestigious Arnold and Mabel Beckman Center at Irvine, California, on 11 and 12 May, the title chosen was "An energy agenda for the 1990s." Contents of the talks were largely on uses of the various forms of energy, the pollution problems arising therefrom, the desirability of expanding the role of natural gas, the need to increase efficiency in the application of energy, and the requirement of long-range, steadfast energy policies. Robert Malpas, managing director of the British Petroleum Company, spoke on "A view of global forces in the energy scene." He pointed to the emotions aroused when energy is used to foster material well-being, while at the same time, there are increasing fears about the finiteness of oil, about nuclear power, and about acid rain and the greenhouse effect. Malpas pointed out that there is a clear option that would minimize both the supply and pollution problem, namely, to accelerate the rate of increasing energy efficiency. He pointed out, however, that at present the drop in price for oil makes it difficult for the public to understand that crude oil supplies are finite. Also, low prices do not encourage investment for energy efficiency.

Malpas called attention to unrealistic attitudes of the public which, he said, "... concludes that technology will come to their rescue on every issue. They believe that it will continue to stretch out the finiteness of oil, ... and that it will reduce the energy needed per unit of output, without any action or investment on their part. They also believe that environmental and ecological concerns will be solved by the cavalry—technology—riding over the hill!"

The recent record of the United States in improving energy efficiency is not very good. Between 1974 and 1983, U.S. industry reduced unit energy consumption 20 percent. But at the same time, Japanese industry achieved a reduction in unit energy consumption of 50 percent. Due in part to an expansion of the number of U.S. cars and trucks, consumption of petroleum products here for transportation is setting new all-time records.

The dynamism of some newly industrialized countries will surely lead to much greater utilization of energy by them and greater demands for petroleum in the not distant future. In the competition for oil imports, the people of the United States may find themselves at a disadvantage. Others using advanced technology are willing to work longer hours for lower pay while enduring more pollution. The United States may find it necessary to change patterns of energy usage to lessen dependence on imported oil.

At the Beckman symposium, Chauncey Starr, emeritus president of the Electric Power Research Institute, made an interesting case for an expanded future for electricity. He cited two developments that could ultimately be of great importance—fuel cells and improved batteries making electric automobiles more feasible. Research and development of fuel cells has been meeting with increasing success. Fuel cells can achieve efficiencies of 60 to 80 percent. A phosphoric acid fuel cell employs an input of hydrogen and air. The hydrogen can be obtained from hydrocarbons or by gasification of coal. Improvements in the lead-acid battery and of electric vehicles has made the combination marginally competitive for short-range urban uses. Also improvements in the nickel-iron cell have produced a battery with 50 percent more energy storage per unit weight than the lead-acid cell. Starr stated that a successful 100-mile-range electric automobile could satisfy 92 to 95 percent of the average family's trips and could provide 66 to 74 percent of the annual miles traveled, reducing national oil needs by as much as half and reducing urban pollution.

The overwhelming odds are that the United States will eventually be forced to make the transition to an energy economy based on its own natural resources and employing more highly efficient use of energy. Either the transition will be conducted in a gradual, orderly manner, or it will be conducted in a long drawn-out painful way after a major crisis. Technology cannot come riding over the hill to produce a sudden solution.

—PHILIP H. ABELSON

Genetic Technology Grade™

Performance Certified

Genetic Technology Grade™ agarose from FMC BioProducts is in a class by itself, having been specifically developed for use in molecular biology procedures. FMC BioProducts is committed to your research.

Each and every Genetic Technology Grade product lot is tested extensively in genetic research laboratories just like yours. We're so confident that these products will perform to your expectations that we certify their applicability for a wide range of electrophoresis procedures. For example, **InCert™ agarose** is certified for enzymatic digestion of chromosomal DNA entrapped within gel

plugs. **NuSieve® GTG agarose** is a unique low-gelling/melting temperature formula for fine resolution of DNA fragments below 1,000 bp and quality assured for direct ligation and transformation of the DNA fragments in the remelted agarose. **SeaKem® GTG agarose**, for fine resolution of DNA fragments greater than 1,000 bp, is extensively tested to ensure the recovery of biologically active DNA.

We provide a technical support hotline so that you can communicate directly with research scientists who speak your language and understand your needs. Please call **1-800-521-0390**.

A higher standard
for genomic analysis
of lambda recombinants

LambdaGEM™-11 Genomic Cloning Vector from Promega

A versatile genomic cloning vector for new cloning, mapping, and walking strategies.

- **Simplified genomic cloning**—*Bam* HI or *Xho* I Half-Site arms optimized for high cloning efficiency and low background.
- **Ultra-low non-recombinant background**—<100pfu/μg arms permits the use of recombination-deficient hosts for non-biased libraries.
- **High resolution restriction mapping**
 - Distinct flanking left and right *Sfi* I sites allow asymmetric labeling of inserts.
 - The use of frequent cutting restriction enzymes (e.g. *Rsa* I) increases mapping resolution by an order of magnitude over conventional cos site oligo labeling.
 - Complete mapping systems are available separately from Promega.
- **Rapid genomic walking**—SP6 and T7 RNA polymerase promoters for end-specific probe synthesis without crosstalk.

Comparison of *Sfi* Linker and Cos Site Oligo Labeling of LambdaGEM™-11 Vector

Structural Map of the LambdaGEM-11 Vector.

The Clear Choice

Introducing **REFERENCE UPDATE™** — the enlightened approach to staying abreast of the scientific literature using your personal computer. This weekly service represents a whole new concept in keeping up with current publications in your field.

Each week subscribers will receive a single floppy disk containing the tables of contents from the current issues of more than 300 major journals of biology and medicine. Simply slip the disk into your computer and request any combination of authors, words in the title, and/or journal names. References that fit your retrieval request will immediately appear on the screen. *You pay no line charges* and retrieve only current references — not the ones that you already saw last week or last month.

If you wish, **REFERENCE UPDATE™** will automatically print reprint requests on special cards provided by RIS. Selected references may be entered directly into your *Reference Manager®* database or transferred into a disk file as a Medline formatted text file.

Of course we don't have a weekly cartoon, "Current Comments®", or a "Press Digest". But neither do we require thumbing through page after page of irrelevant journals, or moving awkwardly between cryptic index numbers in the back pages and titles in the body of a booklet. All we do is provide the information that you need, on time, and in a form that is easy to use.

And the biggest surprise is that the new, enlightened way costs less. Our introductory charter subscription price (through September 1, 1988) is only \$69.00 (plus \$20.00 postage and handling) for a 26 week trial. Our regular price will be \$250.00 a year — *less than \$5.00 a week*.

REFERENCE UPDATE™ is available for the IBM-PC and all compatibles as well as for the Apple Macintosh. Also available from RIS: *Reference Manager®* - the leading bibliographic management software, and *Grant Accountant™* - for more efficient management of grant funds.

ION EXCHANGE

AFFINITY

PATHWAYS TO RAPID PURIFICATIONS

Design your process with **ZetaPrep®** and **ZETAFFINITY™** products for the fastest, most convenient first step purification of valuable biomolecules. ZetaPrep cartridges are available in three chemistries to meet all ion exchange requirements. If your path leads to affinity, ZETAFFINITY devices are available with Protein A, Protein G, Benza-

midine, and in "ready to couple" form. Both lines are in a pre-packed format and offer simple and reliable scale-up from lab to process. These rapid flow rate, high capacity products are setting new industry standards.

To design the most rapid purification path, contact the CUNO office in your area.

Unlocking the unknown.

In bioscience research, every step is a journey into the unknown. At Millipore, we have the tools and technologies to help you find the answers faster. And get a better glimpse of what lies ahead. **MilliGen™ synthesis and sequencing.** Instrumentation and chemistries from our new MilliGen Division are providing genetic engineers and peptide chemists with pure oligomers and peptides in less time than ever before. The MilliGen 7500 DNA synthesizer optimizes high-efficiency β-cyanoethyl chemistry for

maximum yield and minimum cost per coupling. Our 9000 series peptide synthesizers give you the latest Fmoc synthesis methods along with the convenience of programmable automation. **Waters™ high performance liquid chromatography.** Advanced chemistries and equipment from Waters offer fast analysis and purification of proteins, peptides and nucleic acids. For example, the Waters Pico-Tag® System determines the composition of 50 times less protein than traditional methods. Preparative

© 1988 Millipore Corporation

systems like our Delta-Prep™ 3000 and Waters 650 can scale up isolations to milligrams and grams without compromising purity, recovery or activity. And our new Gen-Pak™ columns provide one-hour, one-step purification of oligonucleotides, restriction fragments and plasmids, with the same resolution as electrophoresis.

Millipore membrane products.

Besides laboratory mainstays like Milli-Q® water systems and a variety of sterile filtration products, we're de-

veloping novel devices that make research simpler, and help you achieve results that were previously impossible. Our Immobilon™-P Transfer Membrane significantly improves the efficiency and sensitivity of protein blotting protocols. Millicell® Culture Plate Inserts enhance cell studies by mimicking *in vivo* growth conditions. And time-saving Millipore tangential flow systems are reducing the time it takes to grow and harvest cells, antibodies, viruses and other bio-active materials.

Ask for our "Dimension" series of technical briefs. From cell harvesting, to protein and peptide purification, to the synthesis and sequencing of active biomolecules—Millipore tools and technologies for bioresearch can help uncover new areas for exploration. To find out how, circle Reader Service Card or call 1-800-872-0071, Ext. 2305.

MILLIPORE

FROM 1 GOOD IDEA TO 9 MILLION BASE PAIRS

Good ideas have a way of growing.

Today a good new idea—Pulsaphor™ pulsed-field gel (PFG) electrophoresis—has taken root and eliminated the difficulties that separation of large DNA molecules has previously posed. Separation of up to 9 million base pairs, with ultra-high resolution, is now a growing reality.

How so? PFG electrophoresis uses two alternating electric fields, applied at different angles for different time periods, to stretch coiled molecules across a horizontal plane. Agarose gel block embedding, using whole cells, protects the vital integrity of the DNA molecules. Novel enzymes and reagents are then employed to digest the chromosomal proteins and other cell components.

Control of the pulse time predetermines the size of molecular separations. Control of the electric field shape increases the resolution by sharpening the separated bands. The result is not only high-resolution separation of large molecules, but also dramatically improved resolution in the separation of smaller DNA fragments.

NEW! The new Pulsaphor Plus Control Unit permits programming of the precise pulse and run times that will produce straight lanes for clear, accurate analysis. And up to 9 separate run procedures can be stored in memory for future separations.

NEW! Choose between two electrode kits, the conventional point electrodes or the new hexagonal kit, for the flexibility to run present and future variations of the PFG method.

Think about it. Nine million base pairs from one basic idea! Contact your nearest Pharmacia LKB representative today and ask about PFG and Pulsaphor Plus. It's a good idea that you can grow with.

STRAIGHT LANE SEPARATION OF *S. CEREVISIAE* STRAIN CF 22 USING THE NEW HEXAGONAL ELECTRODE KIT.

THE PULSAPHOR SYSTEM INCLUDES AN ELECTROPHORESIS UNIT, POWER SUPPLY AND CONTROL UNIT.

THE NEW HEXAGONAL ELECTRODE ARRAY COMBINES HIGH RESOLUTION PFG AND LARGE SCREENING CAPACITY.

UNITED IN SEPARATION **LKB**

Circle No. 72 on Readers' Service Card

How can this exciting new system help protect both your laboratory animals and personnel from contamination?

The dumping of cage bedding and animal waste can create—and then lead to—the inhalation of aerosolized contaminants by animals and lab personnel. Such animal exposure can interfere with—or even jeopardize—research studies. And inhalation of contaminants by personnel can result in serious health consequences. Up until now, *this* has been the weak link in the animal facility contamination-containment chain.

Dumping animal bedding waste from cage.

Removing optional paper bag.

Removing optional burn box with polyvinyl liner.

Now this new Lab Products partial containment system substantially reduces the level of airborne contaminants by restricting all cage dumping to the inside of a negative air flow cabinet; that is, with air flowing *from* the room and *into* the cabinet. The aerosolized particulates are washed out of the airstream by a remarkably effective three-stage filter system and so clean HEPA-filtered air circulates back into the room.

In addition to designing a system that would be effective in scrubbing the air, there were two other major objectives:

- to design a “human-engineered” system that would be comfortable to use and easy to clean
- to design a system that would be easy to maintain; that is, one in which filter or other maintenance was simple and straightforward.

These goals, too, have been achieved.

There are other features/advantages/benefits of the system described in detail in our brochure. To request a copy, please use the coupon, or drop us a line, or call us at 201/843-4600 or 800/526-0469. Fax: 201/843-6040.

There's only one real choice in fast protein LC. The Waters 650.

If you want to transfer and scale up your open column methods on an automated LC with the convenience of storing up to 15 protocols, there's only one real choice.

If you need one instrument to isolate micrograms to grams of purified protein using any FPLC, Protein-Pak™ or self-packed preparative column, there's only one real choice.

If you're looking for complete system control and fast, error-free programming with a full screen CRT display, there's only one real choice.

If you want versatile methods optimization using linear or non-linear gradients with up to four buffers, there's only one real choice.

If you prefer a full range of UV detection options that includes programmable, tunable or fixed, there's only one real choice.

If you require complete methods documentation using either a personal computer or a recording integrator, there's only one real choice.

And if you're looking for a faster, better way to purify proteins, there's only one real choice—**Waters™ 650 Advanced Protein Purification System.**

Program up to 8 sets of parameters with the new MicroPro Power Supplies from HBI.

Now you can program your experiments with or without the use of an external computer. HBI's new MicroPro 1000, 3000 and 5000 High Voltage Microprocessor Power Supplies allow you to program 8 different sets of parameters, with automatic stepping between them based on time or volt/hours.

These features allow you to set a variety of run conditions which can be stored for future experiments. Capabilities can be greatly enhanced by the use of available software packages. MicroPro features include excellent regulation of voltage, current and power, load and

leak detection, automatic crossover, volt/hour indication, 100-hour timer and LED readout.

HBI 250 and 500 Volt Power Supplies offer an economical alternative for routine applications. Standard features include 2 sets of output terminals, LED readout, overload protection, and automatic crossover at maximum output when operating in constant power or constant volts mode.

Solubilizers for Protein Membrane Characterization

Digitonin (Highly Purified)

- Soluble in water without boiling
- Precipitation does not occur after cooling
- Remains stable up to six days
- Ideal for use with chromatography

* Availability..... 1g/25g

n-Octyl-β-D-Glucoside

- Very little interaction with membrane proteins
- Easily separated by dialysis
- CMC reported to be 2.5 mM/L

* Availability..... 1g/5g

n-Heptyl-β-Thioglucoside

n-Octyl-β-Thioglucoside

- More stable than Octylglucoside
- Less susceptible to Hydrolytic Cleavage

* Availability..... 1g/5g

BIO Technica

International Exhibition + Congress
for Biotechnology
Hannover, West Germany
20th - 22nd September, 1988

BIOTECHNICA Hannover - worldwide the leading
forum for biotechnology.

An ideal combination of exhibition, congress and seminars provides unparalleled opportunities to obtain valuable information and make important contacts in this technology of the future.

The Exhibition

Approx. 450 exhibitors from science and industry will present an international display of biotechnical research findings, products and processes, as well as modern laboratory and production technology.

The International Congress

Leading scientists from throughout the world will present papers on issues of major importance:

1. Biological treatment of industrial waste and pollutants
2. Integrated biological processing technology
3. Plant cell and tissue cultures

Program of Seminars

Exhibitors, various organizations and national delegations will provide in-depth information on practical experiences in the field of biotechnology.

The Ventilated Animal Rack:

Some day soon most research animals, personnel, and research programs will be protected this way.*

What is a "Ventilated Animal Rack"?

It is a portable, totally enclosed animal rack with four separate, independent, isolated-from-each-other chambers. Low velocity air enters each chamber, makes a single pass over the cages, and is exhausted by negative pressure directly to the main exhaust system. This special rack (VR-1) most effectively isolates the animals from the animal room... and the research personnel from the animals.

What are the benefits to the animals?

There are many. Cross-contamination is substantially decreased because air from an infected animal goes to the exhaust system with an absolute minimal exposure of the other animals. Animal stress is also significantly reduced: the enclosed environment is quiet; drafts and thermal and humidity fluctuations are greatly minimized; and animals can be easily observed without inducing stress. The success of this environment is attested to by the fact that the total number of animals born to a species that breeds poorly (DBA/2J mice) is increased and the percent survival is also appreciably higher. Additional evidence: judging by acceleration of weight gain, newly arrived animals housed in this system become acclimated more rapidly. Further evidence? Even multiple species can be successfully housed in the same rack.

What are the benefits to the research workers?

Since the air in the rack is exhausted into the main exhaust system and does *not* re-enter the animal room itself, research workers are effectively isolated from animal dander or other allergens, odor, pheromones, microorganisms, and food and bedding dust. Even with the doors of the unit open, the direction of air flow tends to be *from* the room and *into* the unit which helps to contain contaminated air *within* the unit. Result: virtual elimination of allergic reactions and generally, a cleaner, safer, odor-free work environment for the research people.

What are the benefits to research programs?

Because this system greatly reduces the chance of cross-contamination, and because it provides a much less stressful environment generally (e.g., it tends to reduce the amount of animal handling required), the chances of jeopardizing expensive research programs are substantially minimized.

Are there other benefits?

The air velocity is variable and is separately adjustable for *each* shelf. The system offers a choice of bottle watering or a specially designed upfeed serpentine automatic watering configuration that eliminates stagnant water, permits flushing during the day, and significantly minimizes contamination. This rack also permits excellent space utilization since multiple species can be safely housed in the same room. Cleaning is easy; VR-1 can be handled by most standard rack washers. The unit is quiet. And, in summary, it is a most effective isolation system *that can actually divide a room into multiple separate, isolated environments.*

From Lab Products, Inc.—The leader in environmental control products

Lab Products now offers the widest selection of systems for environmental protection: five Stay-Clean™ laminar flow systems; Isosystem™ housing system consisting of a disposable filter cap, cage cover, and plastic cage; Enviro-Gard™ filter system with permanent filter bonnets; and See-Through™ suspended cage systems with a special filtering system. We are now likely to have at hand solutions to virtually all of your environmental problems.

For more information

Why wait for "some day soon"... write or call Lab Products, Inc., 255 West Spring Valley Avenue, Maywood, N.J. 07607 or complete the coupon. (phone 201/843-4600)

SORVALL® Centrifuges cover the

spectrum of separation needs

Ultrasonics

SUPRAspeed

Superspeeds

Table Tops

Du Pont now offers more ways than ever to help you meet today's challenges in centrifugation—an array of products and services with just the right blend of automation, versatility, reliability and economy.

AUTOMATION

Whether it is ω 2dt integration, program memory or printed run records and rotor logs, SORVALL® ultraspeed centrifuges let you choose the degree of automation that's best for you, at speeds which generate over 600,000 x g.

VERSATILITY

With forces from 100 to 100,000 x g, the new SORVALL® RC-28S SUPRAspeed™ centrifuge can accomplish, alone, the multiple-step protocols you now split between ultraspeed and superspeed instruments, making it the most versatile centrifuge available today.

RELIABILITY

The proven performance of both the SORVALL® RC-5B and RC-5C superspeeds have earned them the reputation of being indispensable workhorses in thousands of labs around the world. Day in, day out, they handle the full range of protocols requiring up to 50,000 x g.

ECONOMY

No one offers a more complete line of tabletop centrifuges than Du Pont, so you can choose just the right SORVALL® for your budget—from basic to sophisticated, from manual to programmable.

Expertise in centrifugation is only a part of our "Working Knowledge" in biotechnology. Also look to Du Pont for:

8:51 AM Automatic Fura-2 Ca^{++} Determination

Introducing the RF-5000: Fluorescence spectroscopists never had it so easy.

A chemists dream: Convenience, accuracy, sensitivity, speed and great data handling too. Fluorescence spectroscopy used to be slow, cumbersome and full of annoying little problems. It seemed to take forever to find the optimum wavelength for excitation or emission, in order to take a scan. It was cumbersome to correct for Raman or Rayleigh scatter, and quantitation curves were hardly ever linear. Besides, it didn't have quite enough dynamic range, and sensitivity left a lot to be desired. Not anymore.

Shimadzu's new spectrofluorometer RF-5000 does away with all those "little problems." Here's how:
Automatic 3D optimum wavelength search;
high-speed alternate Ex/Em wavelength
time scan

(slews at 9000 nm/min!); quantitative analysis with first through third order curve fits (with linear, log, log-logit axes!); S/N typically found to be over 400 with a 10 nm bandpass (Ex and Em) for the Raman band of H_2O at 350 nm Ex and 397 nm Em; storage of 15 scans, 4 calibrations, 8 parameter files and 4 time scan files; addition, subtraction and smoothing — even on the fly! And for superior data presentations it comes with a high resolution color video display and a high resolution alphanumeric and graphic printer/plotter.

So, now you can forget all those little problems. The only reservation you should have is with your Shimadzu representative for a demo of the new RF-5000. You never had it so easy. Just call (301) 381-1227.

AAAS Announces a Report on:

Science Policy Careers

Graduate Education and Career Directions in Science, Engineering and Public Policy, by *Albert H. Teich, Barry D. Gold, and June M. Wiaz*

Educational programs and professional practice in the field of science policy are continually evolving, shifting their focus in response to the changing demands of today's society. This study provides an up-to-date and comprehensive assessment of graduate education and career patterns in science policy. Conducted under the auspices of the AAAS Committee on Science, Engineering and Public Policy and supported by AAAS and the National Science Foundation, the project presents empirical data from the programs, graduates, and employers in the field.

...a must for policy makers, students, employers, and anyone interested in gaining insight into science policy programs.

1986; 168 pp.; softcover \$10.00 (\$8.50 for AAAS members).

SCIENCE

Neuroscience

Edited by Philip H. Abelson, Eleanore Butz, and Solomon H. Snyder

A collection of 27 *Science* articles on neuroscience research — ranging from genetic engineering to clinical therapy. Provides an integrative treatment of brain anatomy, physiology, and chemistry, and addresses fundamental questions concerning nervous system functioning. 1985; 454 pp.; hardcover \$29.95 (\$23.95 for AAAS members); softcover \$14.95 (\$11.95 for AAAS members); AAAS Publication #84-13.

Biotechnology: The Renewable Frontier

Edited by Daniel E. Koshland, Jr.

Covers the latest and most important topics at the forefront of biological research in 26 papers from *Science*. Illustrates the extraordinary cross-disciplinary aspects of modern biology and its tremendous impact on the future. Topics include virology, immunology, developmental biology, cancer, hormones, sensory phenomena, and more. 1986; 384 pp.; hardcover \$29.95 (\$23.95 for AAAS members); softcover \$17.95 (\$14.35 for AAAS members); AAAS Publication #85-26.

AIDS: Papers from Science, 1982–1985

Edited by Ruth Kulstad

Presents some of the most frequently cited research papers and news reports on AIDS, published in *Science* between 1982 and 1985. Chronicles how far AIDS research has come and provides an indication of the

direction in which it might go. An overview of AIDS research is provided by Myron Essex, chairman of the Department of Cancer Biology, Harvard University School of Public Health. 1986; 654 pp.; hardcover \$32.95 (\$26.35 for AAAS members); softcover \$19.95 (\$15.95 for AAAS members); AAAS Publication #85-23.

Frontiers in the Chemical Sciences

Edited by William Spindel and Robert M. Simon

Describes recent progress in all areas of chemistry, including new work in ultrafast reactions, chemical catalysis, organic synthesis, enzyme mechanisms, theoretical chemistry, analysis, and the chemistry of materials. Compiled from 38 *Science* articles. 1986; 624 pp.; hardcover \$29.95 (\$23.95 for AAAS members); softcover \$17.95 (\$14.35 for AAAS members); AAAS Publication #85-10.

Astronomy & Astrophysics

Edited by Morton S. Roberts

From our own solar system to the pulsars at the very edge of the cosmos, this collection of 24 articles from *Science* reveals a broad, coherent, and contemporary picture of our astronomical universe. Topics include galaxies and cosmology, the solar system, instrumentation, and the structure and content of the galaxy. 1985; 384 pp.; hardcover \$29.95 (\$23.95 for AAAS members); softcover \$17.95 (\$14.35 for AAAS members); AAAS Publication #85-4.

Order from: AAAS Marketing Dept. SM, 1333 H Street, NW, Washington, DC 20005. Please specify the appropriate AAAS Publication #(s), add \$2.00 postage & handling per order, and allow 4–6 weeks for delivery. VISA and MasterCard accepted. For shipments to CA, add applicable sales tax.

Published by the American Association for the Advancement of Science

tion between private and public patriarchy. If anything, it is an illustration of the reasons why patriarchy has remained a problematic concept. According to the author, women were originally oppressed by men as members of families. This constituted a private form of patriarchy. Industrial capitalism gradually broke down the bonds of kinship, substituting for them impersonal forms of authority in the marketplace, the firm, and the corporation. This represented a triumph of public over private patriarchy. From this overly schematic approach, the author has no alternative but to conclude that public patriarchy, though still oppressive of women, represents an improvement over the past insofar as it provides freer access to jobs and earnings and therefore greater autonomy and independence for women.

Undoubtedly, some women have benefited from changes brought about by industrial capitalism as a result of their membership in privileged classes. Others have found their conditions of life debased as a result of the same process. The point is that neither of these transformations can be fully explained by invoking patriarchy in isolation from other factors. To say that class and ethnicity also matter is not enough unless we are willing to examine the articulation between patterns of domination and labor appropriation involving men as well as women.

One way to do this is by investigating the part played by gender in the maintenance of exploitative systems of production. Highly polarized definitions of womanhood and manhood have been key factors in the maintenance of class-divided societies. Expectations and behaviors surrounding definitions of manhood have been instrumental in the exploitation of male labor. "Providers" and "heads of households" may obtain net benefits from their status, but they are also compelled to fulfill onerous responsibilities that subordinate them to employers.

In a complementary vein, the ideal of transforming all women into home-bound mothers and wives serves to obscure the manner in which reproductive labor subsidizes processes of capitalist accumulation by absorbing costs that investors are unwilling to assume. By taking such factors into consideration, we are in a better position to understand the mechanisms that link class with gender.

Then there is the question of resistance and outright confrontation. Neither women nor men have invariably accepted institutional definitions passively. Three chapters in *Hidden Aspects of Women's Work* explore this subject. One is an engaging description of work and labor organizing in Troy, New York, in the late 19th century. This excellent

piece discusses the relationship between family composition and women's participation in workers' organizations. This issue has important implications for understanding working women in general. The author correctly states that avoiding stark contrasts between women and men and looking at conditions under which some women are able to organize successfully reveals subtle differences between male and female workers and among women workers in the same and different industries, occupations, and communities.

A final word of praise should be said about two other chapters, one dealing with the elaboration of minimum wage legislation for women between 1910 and 1925 and one relating the peculiar undercount of women's employment in 1900 and 1980. The first piece is exemplary for its breadth and detail. The second confirms a long-held suspicion: The apparent jump in women's employment during the latter half of the 20th century may be an artifact of census methodologies that tended to ignore women as "real" workers in the past. That most people still believe that women's involvement in productive labor is a recent phenomenon is a testimony to the power of ideology over facts.

Perhaps the most important contribution of *Hidden Aspects of Women's Work* is that it adds new information to the vital and ongoing debate about the meaning of women's labor. This is a theme that should be of interest to social scientists of various theoretical persuasions.

Champions of Relativity

Einstein in Spain. Relativity and the Recovery of Science. THOMAS F. GLICK. Princeton University Press, Princeton, NJ, 1988. xiv, 391 pp., illus. \$42.

In the words of its author, this book is "a contribution to the history of civil discourse in matters of science in an ideologically polarized society" (p. xi). Glick, who has previously examined the reception of Darwinism and psychoanalysis in Spain, argues that the enthusiastic response to relativity—crystallized by the visit of Albert Einstein to Spain in 1923—was the result of a new consensus among an otherwise ideologically divided elite on the need for more scientific research, a consensus that disintegrated only in the tense political atmosphere of the

Work Experience and Psychological Development Through the Life Span

Edited by Jeylan T. Mortimer, *University of Minnesota*, and Kathryn M. Borman, *University of Cincinnati*

Only recently have researchers begun to explore the relationship between occupational conditions and psychological development during different phases of life. This book examines a wide range of related issues, including part-time work for adolescents; adjustment of young adults to new work roles; occupational self-direction among different age groups; job satisfaction, age, and gender; women's dual roles at home and at work; loss of "vitality" among midcareer and older workers; and self-concept and job-related disabilities.

\$29.95; AAAS members \$23.96 (include membership number from *Science*). 306 pp., 1987. AAAS Selected Symposium 107.

Order from: Westview Press, Dept. AAAS, 5500 Central Avenue, Boulder, CO 80301. (Add \$2.50 postage and handling for the first copy, 75 cents for each additional copy; allow 4-6 weeks for delivery.)

Application of Biotechnology: Environmental and Policy Issues

Edited by John R. Fowle III, *Office of Health Research, U.S. Environmental Protection Agency*

As new advances in biology permit the development of genetically engineered organisms with commercial applications, tough ethical questions arise. This book discusses current knowledge about levels of risk, information needed to provide assessment data, and ways to proceed along the frontiers of biotechnology. Beginning with a description of the socio-historical context of the subject, the volume addresses — from diverse viewpoints — the relevant scientific and social issues, including the concern over possible environmental release of these new organisms.

\$25.00; AAAS members \$20.00 (include membership number from *Science*). 242 pp., 1987. AAAS Selected Symposium 106.

Order from: Westview Press, Dept. AAAS, 5500 Central Avenue, Boulder, CO 80301. (Add \$2.50 postage and handling for the first copy, 75 cents for each additional copy; allow 4-6 weeks for delivery.)

Issues in Science and Technology

Scientists and Journalists Reporting Science as News

EDITED BY
Sharon M. Friedman
Sharon Dunwoody
Carol L. Rogers

Scientists and Journalists: Reporting Science as News, Edited by Sharon M. Friedman, Sharon Dunwoody, and Carol L. Rogers.

The public is interested in science and depends largely on the mass media for the latest information. But how well do scientists and journalists communicate with each other and to the public? This book examines the links between scientists and journalists as seen through the eyes of both. 1986; 334 pp.; hardcover \$24.95 (\$19.95 for AAAS members); AAAS Publication #86-20.

SCIENCE and CREATION

Geological, Theological,
& Educational Perspectives

EDITED BY
Robert W. Hanson

Science and Creation: Geological, Theological, and Educational Perspectives, Edited by Robert W. Hanson.

The creation/evolution controversy is examined by scientists, theologians, educators, and historians. These authors view the controversy as a false dichotomy and as an attempt to force a choice between two ideas that are not mutually exclusive. Includes case studies from several states. 1986; 240 pp.; hardcover \$24.95 (\$19.95 for AAAS members); AAAS Publication #86-19.

Low Tech Education IN A HIGH TECH WORLD

COOPERATION AND
CONFLICT IN THE NEW
INFORMATION SOCIETY
ELIZABETH USEEM

Low Tech Education in a High Tech World: Corporations and Classrooms in the New Information Society, By Elizabeth L. Useem.

Are students in the U.S. developing the skills necessary for a high technology society, or will it be technological boom, educational gloom? Useem examines education in California's "Silicon Valley" and Boston's Route 128, two of the country's leading high tech centers, and suggests ways for education and industry to forge a stronger partnership for the future. 1986; 278 pp.; hardcover \$19.95 (\$15.95 for AAAS members); AAAS Publication #86-21.

The Gene-Splicing Wars

Reflections on the
Recombinant DNA Controversy

EDITORS
Raymond A. Zilinskas

AAAS
American Association for the Advancement of Science

The Gene-Splicing Wars: Reflections on the Recombinant DNA Controversy, Edited by Raymond A. Zilinskas and Burke K. Zimmerman.

Questions of safety and ethics about recombinant DNA techniques continue to surface. This book takes a look at historical, political, industrial, scientific, and international aspects of these issues. The authors show how lessons learned from the experience can be used to cope with similar issues in the future. 1986; 288 pp.; hardcover \$24.95 (\$19.95 for AAAS members); AAAS Publication #86-18.

SCIENCE AS INTELLECTUAL PROPERTY

Who Controls Scientific Research?
DOROTHY NELKIN
Cornell University

Science as Intellectual Property: Who Controls Scientific Research? By Dorothy Nelkin.

Who controls research? A growing number of legal and administrative disputes raise critical issues of professional sovereignty, scientific secrecy, and proprietary rights. Nelkin offers cases illustrating the dilemmas that arise as the interests of scientists, the rights of citizens, and the security needs of government and industry come into increasing conflict. 1984; 130 pp.; softcover \$9.00 (\$7.25 for AAAS members); AAAS Publication #84-17.

commend that libraries buy it and that everybody working in the field have a look at it and read some of the chapters. As evidenced by this book, optimal foraging is emerging from a troubled adolescence into an uncertain future. I shall guess that its future will be shaped, at least in part, by the ideas on learning and memory—and possibly on game theory—presented in this volume.

North American Paleontology

Late Quaternary Mammalian Biogeography and Environments of the Great Plains and Prairies. RUSSELL W. GRAHAM, HOLMES A. SEMKEN, JR., and MARY ANN GRAHAM, Eds. Illinois State Museum, Springfield, IL, 1987. xiv, 491 pp., illus. Paper, \$20. Illinois State Museum Scientific Papers, vol. 22. Based on symposium, Iowa City, IA, 1980.

The 12 papers in this volume are dedicated to Ernest L. Lundelius, Jr., in recognition of his work on the paleontology of mammals in North America, especially central Texas. The main authors are R. W. Graham and H. A. Semken, Jr., who author or coauthor five papers and the introductory chapter, "Philosophy and procedures for paleoenvironmental studies of Quaternary mammalian faunas."

The Late Pleistocene or Holocene faunas of Illinois and Missouri, of the northern, central, and southwestern Great Plains, of the Northern Bighorn Mountains, of Montana and southern Alberta and Saskatchewan, and of the Lange/Ferguson Clovis Site in South Dakota are considered in individual chapters. Each of these chapters assembles many data on mammalian, particularly micromammalian, temporal distribution over the past 30,000 or fewer years, especially the last 10,000 years, and on the geographical distribution of the known sites that have produced local faunules. These chapters are usually supported by extensive tables listing the sites, their archeological context if any, radiocarbon dates, and taxa recovered. Often the taxa are assembled as faunas for particular swatches of Holocene time and these observed faunal changes over time used for paleoclimatic reconstructions.

Semken and C. R. Falk's chapter "Late Pleistocene/Holocene mammalian faunas and environmental changes on the northern plains of the United States" (pp. 176–313) is an extensive treatment of present and past loci of sympatry for small faunules of ten or

so micromammalian taxa, showing the generally northern shift of the areas of sympatry from Pleistocene-Holocene boundary times to today or the separation of the now-western montane from the now-eastern woodlands taxa as the plains became drier as the Holocene progressed. Other papers give similar treatments but not as broadly, often because they treat smaller geographic areas. Maps showing the areas of present-day faunal sympatry for an extinct local faunule are numerous and illustrate well the points made by the authors.

The book is well produced, easy to read, and well printed and bound, with an index of all localities. Most of the figures are line diagrams; the few half-tones are clear but not strongly printed.

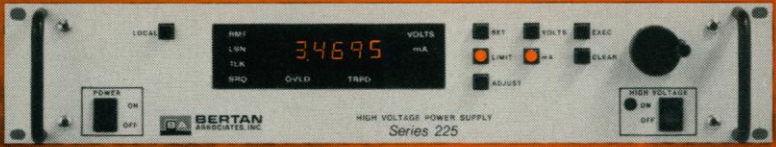

This is not a work that may be read at a sitting but one to be consulted or dipped into. It brings together many scattered records and places them in environmental and faunal perspectives. It is thus a "Handbuch" or compendium that summarizes much of the present knowledge of Holocene faunas and environments for the central plains of
