biotechnology. It is difficult to separate the ecology of anaerobes from their geochemical effects, roles in global nutrient cycling, and potential influences on groundwater quality. The first chapter, an introduction to biogeochemistry, addresses these effects. The final chapter explores the potential impact of anaerobes on biotechnology, especially in biodegradation of pollutants. Development of these themes unites the text and broadens its usefulness for readers in disciplines outside microbiology, including those interested in the bioremediation of hazardous wastes.

Biology of Anaerobic Microorganisms was a pleasure to read (even the references). When it arrived at our library, I borrowed it for a six-month term, never believing I'd keep it that long. I kept it for five months, after which students have kept it constantly off the library shelf. This long-awaited book is another indication that anaerobic microbiology has come of age.

Some Other Books of Interest

A History of Psychology in Autobiography. Vol. 8. GARDNER LINDZEY, Ed. Stanford University Press, Stanford, CA, 1989. xii, 485 pp., illus. \$49.50.

The series this volume represents dates back to 1930, having been edited successively by Clark Murchison, E. G. Boring, and (since volume 5, 1967) Gardner Lindzey. Each volume has contained autobiographical memoirs by 13 to 15 eminent psychologists. The present volume is the first to appear since 1980 and the first to be published by Stanford University Press. In his preface the editor reports that "in [his] biased judgment, this is the most interesting set of accounts that has yet appeared in the series. It includes several of the most gifted writers that psychology has (or has had); it includes our first joint autobiography; and ... our three women contributors exceed the number in any previous volume." One contribution provides a report on "much of what has transpired in Geneva since Piaget's autobiography was published in this series more than 30 years ago." With respect to institutions, the series as a whole has, Lindzey notes, provided an array of perspectives on the development of the field at two of its preeminent institutions, Harvard and Stanford, and with this new volume the Rockefeller Institute and University are now represented. The current set of contributors are Roger G. Barker, Roger Brown, Lee J. Cronbach, William K. Estes, Fritz Heider, Leo M. Hurvich and Dorothea Jameson, Bärbel Inhelder, R. Duncan Luce, Eleanor E. Maccoby, Paul E. Meehl, George A. Miller, Carl Pfaffmann, and Stanley Schachter. Each provides a list of his or her "selected publications," and a name index and a list of contributors to the earlier volumes are appended.-K.L.

Biotechnology and the Research Enterprise. A Guide to the Literature. WILLIAM F. WOOD-MAN, MACK G. SHELLEY II, and BRIAN J. REI-CHEL. Iowa State University Press, Ames, 1989. xviii, 358 pp. \$49.95.

This is a guide to works not on biotechnological techniques, results, and applications but on biotechnology-most specifically, agricultural biotechnology-in its social and economic ramifications. Compiled at Iowa State University with funds appropriated by the Iowa legislature for examination of the broader issues raised by biotechnology, the volume lists, summarizes, or describes publications ranging in length from editorials to full books and including reports prepared by or for government agencies, universities, foundations, associations, and other institutions. The entries are arranged according to theme: federal research policy generally, university-industry relations, conflict of interest, university research, the biotechnology industry, international biotechnology, and "related issues" (including public perceptions and ethical implications). Each set has an introduction, and the volume also includes a directory of biotechnology organizations, commercial and otherwise, a list of periodicals that regularly cover biotechnology, and a glossary of terms relating to biotechnology. It lacks a general index, and there is no crossreferencing between sections .--- K.L.

Books Received

Acoustical Imaging. Vol. 16. Lawrence W. Kessler, Ed. Plenum, New York, 1988. xii, 658 pp., illus. \$115. From a symposium, Chicago, IL, June 1987. Additive Gene Systems. An Explanation for Prob-

lems in Evolution and Selection. Roy G. Silson. Green-field, Tring, U.K., 1988 (distributed by the author, Near Station, Tring, Herts., U.K. HP23 5QX). 312 pp., illus. \$35; paper, \$20. Advanced Ceramics. Shinroku Saito, Ed. Oxford

University Press, New York, and Ohmsha, Tokyo, 1988. viii, 278 pp., illus. \$65. Reprint, 1987 ed. Advanced Research on Animal Cell Technology.

Alain O. A. Miller, Ed. Kluwer, Norwell, MA, 1988. x, 421 pp., illus. \$119. NATO Advanced Science Institutes Series E, vol. 156. From a workshop, Brussels, Belgium, pt. 1987

An Ancient Air. A Biography of John Stringfellow of Chard, the Victorian Aeronautical Pioneer. Harald Pense. Smithsonian Institution Press, Washington, DC, 1988. 183 pp. + plates. \$22.50.

Biotechnology and the New Agricultural Revolution. Joseph J. Molnar and Henry Kinnucan, Eds. Published for the American Association for the Advancement of Science by Westview, Boulder, CO, 1989. xvi, 288 or Science by Westview, Boulder, CO, 1989. xvi, 288 pp., illus. Paper, \$27.50; to AAAS members, \$22. AAAS Selected Symposia Series, vol. 108. Based on a sympo-sium, Philadelphia, PA, May 1986. Biting off the Bracelet. A Study of Children in Hospitals.
