Dr. Smith
found
two peaks...

Using PeakFit™,
Dr. Jones found
three peaks...

Guess who got the grant?

Because PeakFit™ uses sophisticated non-linear curve fitting techniques, it is far more effective than other data analysis tools in reducing noise and separating unresolved peaks! In fact, PeakFit is one of the most powerful software packages available today for chromatography and spectroscopy data analysis. For chromatographers, PeakFit extracts important system suitability information such as peak areas, asymmetries, and resolutions – plus column efficiency (number of theoretical plates) from raw data. For spectroscopists, PeakFit calculates peak amplitudes, areas, centers and widths – with complete uncertainty analysis, too!

Use PeakFit's 30 built-in peak functions (including Gaussian, Exponentially-Modified Gaussian, Voigt and many others specifically suited for chromatography and spectroscopy) or input and use your own! Output both graphs and data to over 150 printers, including PostScript®. Of course we can't promise that PeakFit will win you a grant (your competition may already be using PeakFit!), but we can promise that PeakFit will enhance your current analysis methods. Order PeakFit today and see just how many peaks there really are in your data!
