THE DAWN OF A NEW ERA IN TRANSFORMATION EFFICIENCIES

THE HIGHEST-EFFICIENCY CHEMICALLY COMPETENT CELLS AVAILABLE

3-5 x 10⁹ colonies/μg

Stratagene has broken the 1 x 10⁹ barrier for competent *E. coli*! We did it by genetically modifying our Epicurian Coli® XL1-Blue and XL1-Blue MRF⁺ cells. The result is our new XL2-Blue and XL2-Blue MRF⁺ ultracompetent cells,* which achieve transformation efficiencies as high as 5 x 10⁹ transformants/μg of plasmid control DNA. To maintain these ultrahigh efficiencies, we package the cells in convenient single-use aliquots that eliminate freeze/thaw cycles.

The 3- to 5-fold increase in efficiency means more colonies per transformation reaction. The XL2-Blue ultracompetent cells are ideal for plasmid library construction. The highest possible efficiency also may be critical when starting DNA concentration is very low and when performing difficult ligations, as in multifragment, blunt-ended and PCR** cloning. These same advantages apply to our new SURE® 2 supercompetent cells,* which offer efficiency of >1 x 10⁹ transformants/μg of plasmid DNA.

* Patent pending

** The Polymerase Chain Reaction (PCR) process is covered by patents owned by Hoffmann-La Roche. Use of the PCR process requires a license.

Telefax: (06221) 400639

An Era of Choice

The XL2-Blue and SURE 2 cells join Stratagene's full range of competent cells for many applications. Our popular XL1-Blue cells are now available as economical competent and subcloning-grade cells, for uses that do not require the highest efficiency. Our standard competent cells include those for stabilizing DNA and cloning toxic genes. Plus we offer electroporation-competent cells with efficiencies as high as 10¹⁰ transformants/μg. The choice is yours.

New Custom Service

Stratagene has initiated a Custom Competent Cell Service that will prepare competent cells of any *E. coli* K-12 strain that is not commercially available. The service will provide a minimum of 50 x 200-μl aliquots of your strain of choice. Contact Stratagene's Technical Services Department for complete details.

Circle No. 48 on Readers' Service Card

SC&A'S "READERS CHOICE" AWARD WINNER 3 YEARS RUNNING!

Get Serious.

Their graphs get the laughs. SigmaPlot® gets your research published.

BELLS & WHISTLES

Fluffy, meaningless business graph

The graph on the left would get laughed out of any serious journal! The graph on the right, published in a prestigious scientific journal, clearly illustrates the significance of the researcher's data. At Jandel, we know your goal is to get the grant—not giggles. SigmaPlot was designed by scientists, specifically for journal publication and grant preparation. Sure, business graphics programs have lots of "bells and whistles." But when was the last time your research called for bar charts with clip-art ducks, or plaid pie chart slices? SigmaPlot puts the powerful *scientific* features you need at your fingertips.

60,000 SCIENTISTS USE SIGMAPLOT TO PUBLISH THEIR GRAPHS.

Choose from Windows, DOS and Macintosh versions of SigmaPlot. New SigmaPlot for Windows

version 1.02 is packed with powerful scientific features including 2D and 3D plots, technical axis scales, math and Greek symbols, and more. Plus, SigmaPlot's error bars, regression lines, full transform language and curve fitting make creating even complex graphs fast and easy.

ADD EVEN MORE POWER TO SIGMAPLOT WITH THE FAMILY OF JANDEL SCIENTIFIC SOFTWARE.

SigmaPlot gives you the graphing power you need for serious scientific research. And best of all, it's expandable! SigmaPlot works together with two of Jandel's most popular scientific software programs: SigmaStat® for Windows and SigmaScan®/Image. You can add SigmaStat's full statistics to SigmaPlot. Or, measure images right on your PC with SigmaScan/Image (use SigmaPlot to graph your measurements). Ask about our new SigmaSuite, a value pack of all three programs!

SIGMAPLOT FOR WINDOWS

Graph published in PALAIOS (a journal of paleontology).

Created by Joseph Pachut, Associate professor Department of Geology, Indiana University-Purdue University at Indianapolis

ORDER SIGMAPLOT TODAY AT NO RISK!

Try SigmaPlot for 90 days — if you're not thrilled with all it can do, we'll refund your money! Jandel has a 12 year history of providing top-of-the-line scientific software tools. Plus, our software comes with FREE professional technical support. Order SigmaPlot today. Call for competitive and customer upgrade pricing, and ask about quantity and academic/student discounts. It's never been this easy for serious scientists to produce publication-quality graphs!

SOLUBLE PROTEIN

Made Fresh Daily

THIOFUSIONTM

THE FIRST SYSTEM FOR

Soluble Protein Expression

..... IN *E. coli*.

The ThioFusionTM Expression System from Invitrogen. Finally there is a way to express soluble recombinant protein in *E. coli*. Now solubilization and refolding of proteins that form inclusion bodies are a thing of the past. Recombinant proteins expressed in the ThioFusionTM Expression System are soluble, even at high levels.

THE *Ideal* FUSION PARTNER.

The ThioFusionTM Expression System takes advantage of the unique properties of the *E. coli* protein thioredoxin. Thioredoxin expresses at levels as high as 40% of the total cell protein, localizes at sites in the *E. coli* cell called adhesion zones, and is stable at high temperature. These properties make thioredoxin the ideal fusion partner. The plasmid vector, pTrxFus, the key to the ThioFusionTM System, carries the entire thioredoxin gene along with the strong P_L promoter to drive expression. In addition, an enterokinase cleavage site, engineered between thioredoxin and the protein of interest, allows removal of the fusion to restore the native protein.

FAST, SIMPLE PURIFICATION.

The ThioFusionTM System gives you two simple ways to purify your fusion protein. Osmotic shock releases proteins accumulated at adhesion zones into the medium. Heat treatment denatures most native proteins leaving some thioredoxin fusion proteins intact. Both methods are fast and effective.

The ThioFusionTM Expression System (cat. no. K350-01) is the first and only system designed for the expression of soluble recombinant proteins in *E. coli*. To learn more about the next step in *E. coli* protein expression, contact Invitrogen today!

Service.

NUCLEOTIDES

CARBOHYDRATES

LIPIDS

PEPTIDES

For nearly half a century, Sigma Chemical Company has been committed to manufacturing quality biochemicals and organic compounds for researchers around the world. Diversity within our multiple manufacturing sites enables our chemists to produce many of the 33,000 research reagents found in the Sigma general catalog. This diversity allows Sigma to formulate custom blends, to produce specific purities and to fulfill milligram to large-scale production requests for our customers.

In order to support the tradition of quality that you have come to expect from Sigma, our chemists closely monitor every stage of manufacturing, and analytical chemists assay every product we offer. We package experience, service and expertise into every product you receive. But commitment to our customers does not stop here. Sigma continues to provide exceptional service that includes a large inventory of packaged stock, fast delivery and technical assistance.

Weigh all the advantages. Consider Sigma as your single source for research biochemicals.

THIS WEEK IN SCIENCE

edited by PHIL SZUROMI

Off and on binding

Measuring the binding kinetics of critical molecular interactions in T cell activation, such as the binding of T cell receptors (TCRs) to major histocompatibility complex (MHC) molecules that present peptide antigens, can be complicated by interactions between other molecules. Corr *et al.* (p. 946) determined the rates of association and dissociation for complexes of soluble analogs of MHC class I molecules bearing synthetic peptide antigens to purified TCRs that were immobilized on the surface of a biosensor. Dissociation is rapid (a half-time of about 27 seconds), which suggests that multivalent binding may be necessary to initiate a TCR signal.

The ravages of time

The surface of Venus has both impact craters and volcanoes, and because younger volcanic surfaces will have suffered fewer impacts than older ones, it is possible to deduce the history of volcanic activity from the statistics of cratering on lava flows and coronae. Radar map-

ping by the Magellan spacecraft produced a detailed catalog of Venus's surface features, from which Namiki and Solomon (p. 929) deduce that neither of two extreme models—single-age and steady-state volcanism—are correct. Large volcanoes show activity throughout the past 500 million years, during which time 20% of Venus has been resurfaced.

Thinking about moving?

The human cerebellum, a portion of the brain, is located dorsally, underneath the large cerebral hemispheres and nestled against the brainstem, with many parallel striations running horizontally on its surface. Classically, its function is thought to be the coordination of movement and maintenance of posture, but Kim *et al.* (p. 949) provide support for a more recent and controversial proposal that the cerebellum contributes to cognitive processing. They used magnetic resonance imaging to demonstrate the activation of a part of the cerebellum, the dentate nucleus, during attempts to solve a pegboard puzzle. The dentate serves as one of the three major output centers of the cerebellum and projects to the cerebral cortex by means of the thalamus.

Nothing like the sun

Most stars emit only weakly at radio wavelengths: the sun, although it has measurable microwave emission, would be undetectable at typical interstellar distances. Güdel *et al.* (p. 933) report the detection of four apparently solar type stars with strong microwave emission, as much as 3000 times more intense than that of the sun. Two of the four are young and rapidly rotating, so that their radio emission may be due to coronal activity induced by a strong dynamo, but the third is very similar to the sun and the fourth appears to be considerably older. In the last case especially, the source of radio emission remains mysterious.

Old boulders

A key to dating glacial advances in many areas is accurate dating of moraines. One potentially powerful means of dating is analysis of cosmogenic nuclides incorporated in boulders exposed on moraine surfaces. Hallet and Putkonen (p. 937) show how the post-deposition geomorphic evolution of the moraine, including degradation of boulders and exposure of new boulders, affects the apparent age that is determined. They apply their analysis to a

key sequence of moraines along the Sierra Nevada in California that record five major glacial advances.

Tiny bright lights

Light-emitting diodes are sources of monochromatic light that are finding increasing use in solid-state lasers and in communications. Schubert *et al.* (p. 943) studied the photoemission of such a device fabricated between two partially reflective parallel surfaces—a Fabry-Perot cavity. In this device, the inter-cavity spacing is of the order of the optical wavelength, so the energy of the photons that propagate along the cavity is quantized and the emission properties are strongly modified compared to a classical optics cavity. One advantage is that the emission efficiencies are greatly improved.

Making the cut

Manipulations of DNA at the chromosome level would be facilitated by a cleaving agent that could recognize sites longer than the 8-base pair (bp) limit of restriction endonucleases and thus produce fewer cuts and longer pieces. Pendergrast

et al. (p. 959) targeted a non-specific DNA cutting agent, copper:*o*-phenanthroline, by attaching it to the catabolite gene activator protein (CAP). Because CAP bends DNA only when it binds to a specific 22-bp binding site, cutting is highly selective for that site.

Use it and lose it

Most organisms follow the rule of DNA "constancy"—every cell contains at least one copy of the entire genome. Many nematode species, such as *Ascaris lumbricoides* break this rule. Somatic (non-germline) cells discard much of their DNA through a process called chromatin diminution. Etter *et al.* (p. 954) show that this nematode carries genes for two different isoforms of a small ribosomal protein, S19. The gene for the isoform that is more highly expressed in germline cells is eliminated during chromatin diminution, so somatic cells express just one form. This process represents a "throw-away" approach to gene regulation.

Take two

The usefulness of aspirin as an anti-inflammatory drug has been attributed to its ability to inhibit prostaglandin production. Kopp and Ghosh (p. 956) link aspirin to another pathway. They demonstrate that sodium salicylate and aspirin inhibit the activation of NF- κ B, an inducible transcription factor that regulates the transcription of many genes involved in the inflammatory response. Aspirin may inhibit NF- κ B by interfering with the pathway that leads to the phosphorylation and degradation of I κ B, the inhibitor of NF- κ B.

STATISTICA/w

Windows,
DOS, Macintosh

STATISTICA/w™ (for Windows) Complete Statistical System with thousands of on-screen customizable, presentation-quality graphs fully integrated with all procedures ■ Complete Windows 3.1 support, DDE, OLE, TT-fonts, multiple toolbars, right mouse button support ■ Unlimited numbers of data-, results-, and graph-windows ■ Inter-window integration: data, results, and graphs can be treated as objects and converted into one another in a number of ways ■ The largest selection of statistics and graphs in a single system; comprehensive implementations of: Exploratory techniques; multi-way tables with banners (presentation-quality reports); nonparametrics; distribution fitting; multiple regression; general nonlinear estimation; stepwise logit/probit; general ANCOVA/MANCOVA; stepwise discriminant analysis; log-linear analysis; factor analysis; cluster analysis; multidimensional scaling; canonical correlation; item analysis/reliability; survival analysis; time series modeling; forecasting; lags analysis; quality control; process analysis; experimental design (with Taguchi); and much more ■ Manuals with comprehensive introductions to each procedure and examples ■ Hypertext-based Stats Advisor expert system ■ Extensive data management facilities (spreadsheet with long formulas, block operations, advanced Clipboard support, DDE hot links, relational merge, data verification, powerful programming language) ■ Batch command language and macros also supported, "turn-key system" options ■ All output displayed in Scrollsheets™ (dynamic, customizable, presentation-quality tables with toolbars, pop-up windows, and instant 2D, 3D and multiple graphs) ■ Extremely large analysis designs (e.g., correlation matrices up to 32,000x32,000, unlimited ANOVA designs) ■ Megafile Manager with up to 32,000 variables (8 Mb) per record ■ Unlimited size of files; extended ("quadruple") precision; unmatched speed ■ Exchanges data and graphs with other applications via DDE or an extensive selection of file import/export facilities ■ Hundreds of types of graphs, including categorized multiple 2D and 3D graphs, matrix plots, icons, and unique multivariate (e.g., 4D) graphs ■ Facilities to custom design new graphs and add them permanently to menu ■ On-screen graph customization with advanced drawing tools, interactive stretching and resizing of complex objects, interactive embedding of graphs and artwork, special effects, icons, maps, multi-graphics management, page layout control for slides and printouts; unmatched speed of graph redraw ■ Interactive rotation, perspective and cross-sections of all 3D and 4D graphs ■ Extensive selection of tools for graphical exploration of data: fitting, smoothing, overlaying, spectral planes, projections, layered compressions, marked subsets ■ Price **\$995**.

Quick STATISTICA/w™ (for Windows) A comprehensive selection of basic statistics and the full graphics capabilities of STATISTICA/w ■ Price **\$495**.

STATISTICA/dos™ (for DOS) A STATISTICA/w-compatible data analysis system ■ Price **\$795**.

Quick STATISTICA/dos™ (for DOS) A subset of STATISTICA/dos statistics and graphics ■ Price **\$295**.

Domestic sh/h \$10 per product; 14-day money back guarantee.

STATISTICA/Mac™ (for Macintosh) A STATISTICA/w-compatible, comprehensive data analysis and graphics system designed for the Macintosh ■ Large selection of statistical methods fully integrated with presentation-quality graphics (incl. EDA, multiplots, a wide selection of interactively rotatable 3D graphs; MacDraw-style tools) ■ Unlimited size of files ■ Full support for System 7, incl. "Publish and Subscribe" ■ Price **\$695**.

Quick STATISTICA/Mac™ (for Macintosh) A subset of STATISTICA/Mac: a comprehensive selection of basic statistics and the full graphics capabilities of STATISTICA/Mac ■ Price **\$395**.

Need a quotation for economic large scale oligonucleotide synthesis?

“OligoPilot from Pharmacia Biotech offers the reproducibility and flexibility required to scale-up traditional oligonucleotide synthesis. The synthesizer's unique flow-through design, in combination with the Pharmacia Biotech solid support, enables a high coupling efficiency to be maintained while minimizing reagent consumption. This potentially opens the way to economical pilot-scale production of highly pure oligonucleotides and their analogs.”

Dr. Tadeusz K. Wyrzykiewicz, Isis Pharmaceuticals Inc., Carlsbad CA, U.S.A

Leading companies bringing medical applications of oligonucleotide technology closer to market already know how well OligoPilot™ DNA/RNA Synthesizer performs. You can read more of what they have to say in the new brochure. Ask for your copy today.

OligoPilot. It's the breakthrough in economic, large scale oligonucleotide synthesis.

And you can quote us on that.

MDL's new ISIS SAR Table lets you view, correlate, graph, and report chemical structures and their activity data—within a matter of minutes!

Structure Activity Relationship Investigations with a Series of Capsaicin Analogues: The Hydrophobic Side-Chain "C-Region"

Introduction:

A series of analogues of capsaicin, the pungent principle of chili peppers, was synthesized and tested for capsaicin-like agonism *in vitro*. A modular approach has been used to establish the structure-activity profile of specific capsaicin congeners and this report covers modifications made in the hydrophobic chain region ("C region") as exemplified in the following diagram:

Synthesis:

The thioamides referenced in this report were all made by the following general route, which involves condensation of the vanillylamine with the appropriate isothiocyanates:

In one example, reference number 15f, it was necessary to protect the starting material and hence deprotect the final product using the following method:

Ref.: Buckwalter, B. L.; LaBarre, T. R. Novel Urea Derivatives
Eur. Pat. 0068590, 1992

*Ref.: Analogs of Capsaicin with Agonist Activity as Novel Analgesic Agents; Structure-Activity Studies. 3. The Hydrophobic Side-Chain "C-Region". Christopher S.J. Wapole, Roger Wigglesworth, Stuart Savan, Elizabeth A. Campbell, Andy Gray, Ian F. James, Ray J. Mason, Martin N. Perkins, and Janet Winter, J. Med. Chem., 1993, 36, 2381-2390

Analysis:

The following table illustrates the structures and activities of the most recent set of thiourea capsaicin analogues with variation in the hydrophobic chain region ("C region"):

Region ID	R1	R2	R3	# of carbons	Ca EC50 (uM)
15f1a	-CH ₃	-CH ₃	-H	0	1.00
15f1b	-CH ₃	-CH ₃	-CH ₃	1	0.48
15f1c	-CH ₃	-CH ₃	-(CH ₂) ₄ Me	5	1.98
15f1d	-CH ₃	-CH ₃	-(CH ₂) ₆ Me	6	0.18
15f1e	-CH ₃	-CH ₃	-(CH ₂) ₈ Me	7	0.38
15f1f	-CH ₃	-CH ₃	-(CH ₂) ₁₀ Me	9	0.08
15f1g	-CH ₃	-CH ₃	-(CH ₂) ₁₂ Me	11	0.1
15f1h	-CH ₃	-CH ₃	-(CH ₂) ₁₄ Me	13	0.11
15f1i	-CH ₃	-CH ₃	-(CH ₂) ₁₆ Me	15	1.08
15f1j	-CH ₃	-CH ₃	-(CH ₂) ₁₈ Me	17	0.18
15f1k	-CH ₃	-CH ₃	-(CH ₂) ₂₀ Me	19	0.27
15f1l	-CH ₃	-CH ₃	-(CH ₂) ₂₂ Me	21	100
15f1m	-CH ₃	-CH ₃	-(CH ₂) ₂₄ Me	23	100
15f1n	-CH ₃	-CH ₃	-(CH ₂) ₂₆ Me	25	100
15f1p	-CH ₃	-CH ₃	-(CH ₂) ₂₈ Me	27	100
15f1q	-CH ₃	-CH ₃	-(CH ₂) ₃₀ Me	29	100

The data was used to produce the following graph which illustrates the relationship between the chain length (or number of carbons in the sidechain) against the biological activity in the calcium efflux assay:

Note the typical "bell-shaped" curve, with an optimum chain length of approximately 7-8 carbons. There is a notable outlying point at 10 carbons, which is less active than may be expected from the trend of the graph. This point represents the compound containing the adamantyl sidechain, which may be indicative of a bulk limitation in this region of the receptor binding pocket.

That should give you plenty of time to review and analyze your report before submitting it. It should also leave you with a great deal more time to devote to the creative aspects of the discovery and development process.

Structure-activity relationship tables are such a key step in identifying and refining promising compounds, yet the process of creating them has always been time-consuming and labor-intensive. But now the ISIS SAR Table application from MDL Information Systems, Inc., actually reduces SAR Table creation to a simple two-step process carried out on your desktop computer running Macintosh or Windows.

A part of MDL's ISIS family of chemical information management solutions, ISIS SAR Table combines the best features of two top-notch applications—the information integration expertise of ISIS/Base and the spreadsheet expertise of Microsoft Excel—to bring you a spreadsheet especially suited for scientists.

ISIS and MDL are trademarks of MDL Information Systems, Inc. All other products are trademarks or registered trademarks of their respective holders.

Just how good is the ISIS SAR Table? According to Dr. Kevin Haraki of American Cyanamid Company:

"ISIS SAR Table is the first application that really combines structures and data in a single spreadsheet that can be manipulated. It is an elegant method for organizing structures and related data that allows researchers to visually examine related structures and data in close proximity, helping the researcher to discover trends in the data."

GRAINCOLLECTION

HUMANS' NATURAL ECOLOGICAL NICHE

SERGIO TREVIÑO

Translated by:
Rebeca San Martín-Feeney

The logically harmonious thesis contained in this work will revolutionize our current way of thinking about human origins and behavior.

Ernst Mayr, Professor of Zoology, Emeritus, at Harvard University, considered by many to be the greatest evolutionist of the century, has written to the author:

"...I am rather inclined to accept your thesis of the role of graincollecting in the history of mankind, persuaded by your arguments and those of others.

Thank you very much for your interesting and closely argued book!"

How did bipedalism, the loss of body hair, and tool use originate? After more than 130 years of scientific research, the origin of these basic human characteristics is still unknown. Bipedalism, the loss of body hair, and tool use originated 14 million years ago, when our very distant ancestors, *Ramapithecus*, turned graincollectors. Erroneously, we still equate biological evolution with "progress", and therefore, believe humans descend from knuckle-walking, hairy, unskilled tool users who resembled the living great apes, when, in fact these apes descend from bipedal, naked, skilled tool users, who resemble modern man.

The large intestine, humans' largest internal organ, is presently used only to absorb water and electrolytes, although its sacculated nature indicates an evolutionary adaptation to digest cellulose. This intestine's movements are so slow that the first radiologist to observe it said it presented a picture of still life. Much of this inactivity can be attributed to mankind's omnivorous diet. Nonetheless, it follows that, when following an **exclusively** granivorous, cellulose-digesting diet, our large intestine proves to be much more useful and efficient, since our ancestors up to 50 thousand years ago **always** used it to digest cellulose fiber. We are presently neglecting a very useful capability that our ancestors adaptively acquired. Humans, as **all** other primates, were meant to be vegetarian cellulose-digesters and have slim bodies. The size of the human mouth is small for almost any type of omnivorous feeding, making this feature, as well as our powerful teeth, characteristic more of seed-eaters than of carnivorous or omnivorous mammals.

It is inconceivable to think that hominids and their protohominid ancestors lived in the savannas for millions of years and never developed the practice of feeding from gramineous seeds until the discovery of agriculture, or until fire was used to cook food. If we take into consideration that early hominids were already **bipeds and tool users**, and **the seeds from grasses would lightly touch their hands as they walked in the long-grass grasslands**, it would be illogical to assume that, in spite of the many vicissitudes they suffered during so many million years of living in the savannas, they never tried to feed from these seeds or that they never thought of removing the seeds with their hands. The author argues that when injuring themselves by removing the seeds, they used a **natural** small stone tool to protect their hands, which achieved an unanticipated advantage: they improved their efficiency in removing and threshing seeds.

We invite you to read this book and explore in it the scientific bases of these arguments, upholding the importance of the role of graincollecting in human evolution and behavior.

15 kb

20 kb

Announcing a PCR breakthrough of major proportions.

30 kb

GeneAmp XL PCR.
Lanes 1-3: β -globin cluster,
human genomic DNA, 13.5,
17.7, 19.6 kb; Lanes 4 & 5:
 λ DNA 20.8, 26.4 kb;
M: High molecular weight
marker.

The new GeneAmp® XL PCR Kit makes generating long PCR products a routine procedure. In fact, we QC test the kit for 20 kb using lambda DNA.

Our new *rTth* DNA Polymerase, XL, in combination with a novel reaction buffer, creates optimal conditions for generating long PCR products with high reproducibility and specificity.

What's more, the GeneAmp XL PCR Kit is optimized on GeneAmp® PCR Instrument Systems, and backed by our PCR performance guarantee.

It's just as convenient as our other PCR kits, and opens up new possibilities for mapping, sequencing and genome analysis.

The integrated resources of our Applied Biosystems Division offer you the most comprehensive range of systems, technologies and support in

PCR, nucleic acid synthesis, genetic analysis and protein research.

The GeneAmp XL PCR Kit—a major breakthrough in PCR technology. To order in the U.S., call 1-800-327-3002. For PCR technical support, call 1-800-762-4001. For more information, call 1-800-345-5224. Outside the U.S., contact your local Perkin-Elmer representative.

Powerful security

At the watering hole, even rhinos and lions defer to the African elephant – secure in its extended family group. Unparalleled loyalty and powerful communal defense provide this gentle creature with a peace of mind shared by few inhabitants of the African savannah.

Using Boehringer Mannheim's family of high-performance PCR products will give you a similar peace of mind.

Products designed to work together

For you, function-tested PCR products translate into successful PCR – PCR without failed experiments or time wasted repeating experiments. You'll achieve consistent, reproducible results with PCR products such as:

PCR Master Mix – a ready-to-use amplification premix

PCR Optimization Kit – PCR buffers and reagents for determining the Mg^{2+} concentration and pH value optimal for your primer/template combination

PCR Core Kit^{PLUS} – high-yield PCR plus prevention of carry-over contamination

1st Strand cDNA Synthesis Kit for RT-PCR (AMV) – for efficient preparation of PCR templates from RNA.

A full-service focus

Get everything you need for polymerase chain reactions – template preparation to amplification to analysis of amplified DNA – from your single-source PCR supplier.

In addition to quality products, several customer-focused services combine to provide you with this peace of mind:

- **Accurate, complete orders** that are right the first time
- **Next business day delivery**, so you have the products when you need them
- **Highly trained technical representatives** for all your product information needs
- **Field sales representatives** to help you attain your research objectives.

Pursue peace of mind for your lab

Achieve peace of mind by relying on Boehringer Mannheim for all your PCR needs. Contact your representative for more information, or call us at 1-800-428-5433 (514-686-7141 in Canada).

These products are sold under licensing arrangements with Roche Molecular Systems and The Perkin-Elmer Corporation. Purchase of these products is accompanied by a license to use them in the Polymerase Chain Reaction (PCR) process in conjunction with an Authorized Thermal Cycler.

For Superior RT-PCR, Choose GIBCO BRL SUPERScript™ II RT and *Taq* DNA Polymerase

GIBCO BRL SUPERScript II RNase H⁻ Reverse Transcriptase[†] (RT) generates > 50% more full length cDNA and greater yields of first strand cDNA than other RTs. It is uniquely engineered by the introduction of point mutations, which result in a 10⁶- to 10⁷-fold reduction in RNase H activity without any loss of DNA polymerase activity. You can amplify *any* region of any message and achieve successful RT-PCR.

SUPERScript II RT works well on total RNA, eliminating the need to generate poly(A) RNA, which saves you time and reagent costs. It's active up to 50°C to reduce interference by secondary structure in the RNA template.

And now, GIBCO BRL *Taq* DNA Polymerase is both

licensed and qualified for PCR.

So for superior RT-PCR, choose high quality GIBCO BRL SUPERScript II RT and *Taq* DNA Polymerase...only from Life Technologies.

Comparison of Reverse Transcriptases using
1 µg of a 7.5-kb RNA Template.

The ^{32}P Kinase Assay is about to dye.

Introducing a Non-Radioactive PKA assay that's sensitive to 0.02 units of enzyme activity—the Pierce SpinZyme™ Non-Radioactive PKA Assay.

Sensitive. The Pierce SpinZyme™ Non-Radioactive PKA Assay measures as little as 0.02 units of PKA activity.

Non-Radioactive. No more tedious wash procedures . . . no more radioactive waste disposal . . . no more waiting for the scintillation counter to see your results. The SpinZyme™ Non-Radioactive PKA Assay gives you the sensitivity you need to measure PKA activity . . . without the hassles and hazards associated with ^{32}P .

Specific. Unlike the ^{32}P assay, the SpinZyme™ Non-Radioactive PKA Assay

detects only the phosphorylation of a dye-labeled peptide substrate. There's no interference from the phosphorylation of endogenous protein in physiological samples.

Fast. In as little as 20 minutes, you can perform a complete spin-column separation—including all binding and elution steps. The Pierce SpinZyme™ separation unit incorporates a unique affinity membrane, which quickly and efficiently separates the phosphorylated dye-labeled peptide from the non-phosphorylated peptide.

Wash and elution fractions can be measured spectrophotometrically or fluorometrically. Results can be measured both qualitatively and quantitatively.

TAKE A POSITION OF STRENGTH WITH

Peptide Nucleic Acids

Stronger binding. Greater specificity of interaction. Increased enzyme resistance.

These are just a few of the strengths of Peptide Nucleic Acids (PNA), new DNA analogs that combine a unique polyamide backbone with the four purine and pyrimidine bases. With the power of PNA behind you, you're in a position to forge ahead on newly developed applications — applications that are impossible with DNA.

PCR Clamping
PNA oligomers and PCR team up in an assay to detect single point mutations — without DNA sequencing.

Strand Invasion

Homopyrimidine PNA oligomers displace DNA strands to form PNA/DNA/PNA triplexes.

Custom PNA Synthesis Service

Biosearch can synthesize almost any PNA sequence you need, from simple strings of A, C, G, and T to biotin or fluorescein-labeled oligomers.

Call to sign up for our series of "Practical PNA" notes and get the details on our PNA synthesis service.

A little of your precious sample goes a long way in our osmometer

Many times when you need to measure osmolality you may have only a limited amount of hard-to-come-by sample available. No problem if you're using the Wescor Vapor Pressure Osmometer. It routinely processes samples of only 10 μ L and measures them with 1% accuracy. And it can be calibrated for samples as small as 2 μ L.

Extremely simple to use and highly reliable, the Wescor VPO has another key advantage over the older freezing point osmometers. *It accepts any biological sample including highly viscous solutions and tissue specimens.*

The Wescor VPO has proven to be the ideal instrument for measuring osmolality in all areas of biological research. It's widely used in marine biology, tissue culture, soil and plant physiology, and laboratory animal studies. And you'll find it used for Q.C. work in the food, pharmaceutical, beverage, and ophthalmology industries.

Contact us for more details or to arrange a demonstration. Wescor, Inc. 459 South Main Street, Logan, UT 84321 USA. FAX 801-752-4127. Phone 1-800-453-2725.

WESCOR

For the ^{32}P Kinase Assay that won't dye...

Try the fastest, easiest radioactive assay available—the Pierce SpinZyme™ PKA Assay Kit, featuring our exclusive Basic Separation Units.

Fast. In less than 5 minutes, the SpinZyme™ Basic Separation Units will separate excess [γ - ^{32}P]ATP from the phosphorylated peptide. These exclusive Pierce units feature a phosphocellulose membrane in a spin column format, which eliminates the tedious wash steps of the standard procedure.

Low Background. Researchers who have tested these separation units report significantly lower background levels compared with standard assay methods using phosphocellulose squares.

Convenient Handling, Easy Disposal. The sample buckets containing the phosphocellulose membrane and bound phosphorylated peptide

are easily transferred to scintillation vials for counting. Radioactive liquid waste is contained in microcentrifuge tubes for easy disposal.

Reduced Radioactive Waste. Only 1 ml of radioactive liquid waste is generated per sample.

The SpinZyme™ PKA Assay Kit (Product #29530) contains sufficient materials to perform 100 assays including: Reaction Buffer, Activator Solution, Kemptide (PKA Substrate), PKA Dilution Buffer, 100 SpinZyme™ Basic Separation Units and 100 Additional Receptacles.

The SpinZyme™ Basic Separation Units (Product #29520) includes 100 SpinZyme™

Basic Separation Units and 100 Additional Receptacles. Suitable for use in kinase assay protocols using peptide substrates that will bind to phosphocellulose.

Introducing MEGALON's ResearchStation, a dynamic workspace for integrating and managing all types of electronic data.

RESEARCHSTATION™ FOR WINDOWS™

MEGALON's ResearchStation for Windows provides a single framework for accessing, combining, examining and exchanging information throughout the research cycle.

Dynamic electronic workspace for consolidating and viewing diverse data sets

- Access, combine, view and organize all data—text, images, graphics, video, voice—in a single window, regardless of source or file format
- Examine information from different perspectives using multiple views (workview, outline) and representations (icon, content)
- Work with all desktop software applications in a single window

Intuitive, flexible tools for accessing and handling data

- Browse internal files and local and remote databases to locate information quickly
- Automate routine, repeated tasks with ResearchStation Minder™

Information management based on content, context and history

- Organize and view information in a variety of combinations and contexts

- Automatically track document ownership, activities and modifications
- Automatically track relationships between data, e.g. links between raw data, experiments and reports

Support for collaborative work

- Isolate and exchange relevant information easily with colleagues
- Access new information quickly from multiple, diverse sources
- Create visual representations of work for clarity or formal presentations

Security and standards compliance

- Control access and editing authorization (optional)
- Use electronic sign-off for approvals
- Freeze information at task completion

Windows-standard OLE 2.0 architecture

- Access all existing Windows-based data

- Widely used Windows interface provides an easy platform for learning or building on existing expertise

Accessible, affordable platform and product

- Runs on standard IBM-compatible 386/486 PC's with Windows 3.1 or higher
- Available through MEGALON's worldwide distribution network for the suggested retail price of

US\$995*

*Distributor prices may vary.

MEGALON

ResearchStation is complemented by a growing line of MEGALON desktop software for scientists, including ChemStructure™ drawing and presentation software, Compounds™ chemical structure and information database, and Unistat® comprehensive statistics package. For more information, contact the MEGALON office nearest you. Via e-mail, send requests for general information to info@megalon.com, and requests for sales and distribution information to sales@megalon.com. Both Chromatography Systems Are About The Same Low Price. But That's Where The Similarity Ends.

Why bog down your work with a traditional chromatography system? You can achieve even better resolution, in a fraction of the time, outside the cold room, with a ConSep LC 100™ system from Biosearch.

Whether you are purifying proteins or nucleic acids, the ConSep system delivers high biological activity and purity in just 15 in. of bench space.

And it's so simple to use. The patented Autoblend® four-buffer blending

feature lets you alter both the pH and the ionic strength of your buffers with just a few keystrokes, so you can run pH and salt gradients simultaneously.

The ConSep system is compatible with all conventional low-pressure bead-based columns. And for ion exchange chromatography, the "flow through pores" of our MemSep® cartridges speed the transport of biomolecules, for sharper peaks and faster results.

The ConSep LC 100 system.

Using anything else just doesn't add up. For information and a free video or demonstration in your lab, call the Biosearch Group in the US and Canada at 1-800-872-0071 (Option 1), in Germany at (49) 040-853267-36, in Japan at (03) 3471-8191, in France at (33) 1 30127002, and in the UK and the rest of Europe at (44) 0923 211107.

Imaging

PhosphorImager™

Image your tritium-labeled samples with the Molecular Dynamics PhosphorImager™ system. New tritium-sensitive screens manufactured by Kodak are now available.

HIGH RESOLUTION

With 50μ pixel resolution get all the detail you need for whole body autoradiography. Use the PhosphorImager for all your radioactive samples — ³H, ³²P, ³⁵S, ¹⁴C, ¹²⁵I, and more.

ImageQuaNT™ analysis software and your choice of Macintosh or PC computer make the PhosphorImager system the most widely used instrument for autoradiography. Call today 800 333 5703.

How do you do survival analysis?

Are you analyzing survival data the hard way? Try our way.

Start with StatView...

StatView® is the only Macintosh stats package that combines data management, data analysis, graphing, drawing, and presentation into a single easy-to-use solution. From data entry to finished reports, StatView saves you time and effort.

...now add Survival Tools!

Survival Tools is the latest in a series of drop-in extensions to StatView. Survival Tools incorporates a complete suite of survival analyses into StatView — seamlessly. Survival Tools becomes part of StatView, so you'll enjoy all the benefits of StatView's award-winning interface, full presentation tools, and templates.

It's our way or the hard way

You can analyze the hard way, or the StatView way — the choice is up to you. For more information on StatView, Survival Tools, and other add-on products, call us at 1-800-666-STAT.

How to make your DNA do Windows.

Hitachi Software's DNASIS® for Windows®, opens up a world of opportunity for people who use IBM-compatible computers.

With DNASIS for Windows, you can perform complex sequence analysis using Windows-based software.

DNASIS makes it possible to store, sort, and edit large amounts of research data on a PC. Its speed and accuracy enable you to predict structures, deduce functions, and understand experimental results. DNASIS for Windows, has the ability to create simulations of secondary structure, fragment assemblies, homologies, and protein expression, so you can validate and refine

experimental strategies, all on your PC!

So, if you're eager to see your DNA in a whole new light, give us a call at: 1-800-624-6176.

Research made simple.

NoteBuilder helps you:

- ☑ keep neat, accurate notes
- ☑ search your data
- ☑ spot trends
- ☑ create automated bibliographies
- ☑ find the facts quickly
- ☑ print reports
- ☑ spend less time doing research

NoteBuilder is the only tool you'll ever need for research or keeping any collections of text.

Convert Scanned Images to (x,y) Data

with

UN-SCAN-IT™

Full
Scanner
Resolution

DOS
Windows
Mac

FREE
Demo Disk!

UN-SCAN-IT™

Turns Any Scanner Into an
Automated (x,y) Digitizing System
for Under \$350.

Automatically Digitize:

- STRIP CHART OUTPUT
- INSTRUMENTAL OUTPUT
- OLD GRAPHS AND DRAWINGS
- (X,Y) RECORDER OUTPUT
- PUBLISHED GRAPHS
- ANY HARD COPY GRAPH...

The UN-SCAN-IT software converts scanned
images to (x,y) data at *Full Scanner Resolution!*

The (x,y) data can be saved in ASCII or HPGL
format and imported into almost any
commercial graphics or spreadsheet program.

The UN-SCAN-IT software can also be used to re-scale graphs, integrate
peak areas, smooth data, perform regression analysis, take derivatives, etc.

PERSONAL BIBLIOGRAPHIC DATABASES...

...that cost more.

ENDNOTE • PMS/CITE • PRO-CITE
REFERENCE MANAGER • REF-11

This does more:

PAPYRUS™

Version 7!

- Manages up to 2 million reference citations. Stores up to 16,000 characters and 100 keywords per reference.
- Dozens of predefined output formats, plus the ability to easily design your own.
- 100% compatible with WordPerfect*, Microsoft Word*, Ami Pro*, WordStar, XyWrite, Signature, ChiWriter, TeX. *including Windows™ versions
- Can also be used with virtually all other word processors.
- Fast, powerful search capabilities.
- Able to import references from national databases, CD-ROM files, monthly diskette services, other bibliography programs, or almost any other database or text file.
- Allows an unlimited number of Notecards for each reference.
- Powerful new user interface.
- Fully compatible with Windows™

Introducing JMP® Version 3!

Statistical Visualization and Design of
Experiments Software for the Apple® Macintosh®

See What You've Been Missing

JMP® Version 3 offers many new statistical features that increase power and flexibility, while maintaining its ease of use.

- In addition to the broad range of statistical tools already offered by JMP, new Version 3 features include survival analysis; stepwise regression, cross-tabulations, nonparametric correlations, and inverse prediction.
- Also offered are dramatic new graphical platforms

such as contour plots; ternary plots; outlier box plots; graphical paired T-tests; and UWMA, EWMA, and Cusum control charts.

• Design of Experiments is now an integrated part of JMP. JMP

offers six types of designs: 2-level, response surface, mixed-level, mixture, general factorial, and D-optimal.

Call SAS Institute's JMP Sales Department at
919-677-8000, x5071 for
a free demo disk of
JMP Version 3.
