Ring Laser Design

In relation to the article "Ring laser senses Earth's spin" by Alexander Hellemans (Research News, 5 Sept., p. 1435) about the C-II laser gyroscope, we note a letter by H. R. Bilger (3 Oct., p. 17), asserting sole authorship of the design of this ring laser. This is incorrect.

1) In particular, even the inaugural design document ("The C-11 design manual," August 1994), itself skeletal in places, had two authors, Hans Bilger and Ulrich Schreiber. Early input at this level by

Schreiber in the design document and from experience operating a large ring laser in New Zealand is not adequately acknowledged in Bilger's letter.

2) Bilger's letter omits mention of the more detailed and lengthy design work for C-11 by the Carl Zeiss company in subsequent years. This was necessary to provide a substantial part of the novel applied technology and to make the instrument possible.

3) The setup and the conditions of operation have changed drastically over the last 15 months. Major modifications were made during the 8-month commissioning by Schreiber on site at Christchurch, New Zealand.

In summary, Bilger's letter underrates the contribution of others at all levels and ignores items 2 and 3.

Corrections and Clarifications

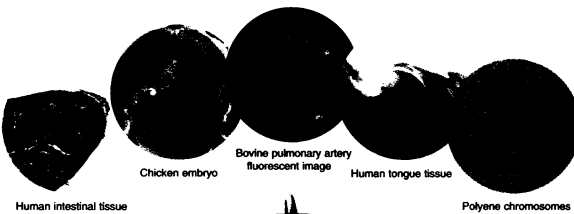

■ The affiliation of Frederick Prete, the second author of the report "Visual input to the efferent control system of a fly's 'gyroscope'" by Wai Pang Chan *et al.* (10 Apr., p. 289) was given incorrectly. He is in the Department of Biological Sciences (not "Psychology") at DePaul University in Chicago, Illinois.

■ In the Meeting Brief "Clues to unsolved arsenic case" by Jocelyn Kaiser (20 Mar., p. 1850), the affiliation for Michael Waalkes should have been given as the National Cancer Institute.

Letters to the Editor

Letters may be submitted by e-mail (at science_letters@aaas.org), fax (202-789-4669), or regular mail (*Science*, 1200 New York Avenue, NW, Washington, DC 20005, USA). Letters are not routinely acknowledged. Full addresses, signatures, and daytime phone numbers should be included. Letters should be brief (300 words or less) and may be edited for reasons of clarity or space. They may appear in print and/or on the World Wide Web. Letter writers are not consulted before publication.

THE 1-MILLION-PIXEL DIGITAL CAMERA SYSTEM
No matter what your photomicroscopy application, you cannot get better image quality at a lower price than with a Pixera digital camera system. In fact, to match Pixera's million-pixel resolution, you would have to spend at least 5 times as much. And Pixera gives you everything you need including a full suite of application software so you can visualize, create and communicate.

NOW—THE PERFECT TOOL FOR TELEMEDICINE.
You can capture two- or three-dimensional still or moving images directly to your PC, Mac, or laptop and then manipulate, organize, archive, and communicate those images via video conferencing or e-mail. A new PCI card makes the system unbelievably easy to install and to use. For more information, visit our web site at www.pixera.com or call toll-free 1-888-4 PIXERA.
