

SCIENCE'S COMPASS

CORRECTIONS AND CLARIFICATIONS

namely, determination of endocranial capacity in Stw 505, we will leave further discussion of that interesting specimen for another day. We can report, however, that some of our more recent computed tomography studies have reconfirmed one endocranial capacity estimate mentioned by Holloway, that of 480 cm³ for Sts 5 (Mrs. Ples).

We welcome the input of our colleagues into this most interesting debate about early hominid paleobiology. Once paleoanthropology matures as a science to the point where all interested parties have unfettered access to the same original fossil data, we suspect that many of our apparent differences of interpretation will melt away.

In the issue of 11 December, in the article "Genome sequence of the nematode *C. elegans*: A platform for investigating biology" by The *C. elegans* Sequencing Consortium (Special Section, "*C. elegans*: Sequence to biology," p. 2012), figure 3 (p. 2016) was printed incorrectly (see <http://www.sciencemag.org/feature/data/5396-2012.pdf> for correct figure). In the same issue, in the article "*Caenorhabditis elegans* is a nematode" by Mark Baxter (Special Section, "*C. elegans*: Sequence to biology," p. 2041), figure 2 (p. 2043) was printed incorrectly (see <http://www.sciencemag.org/feature/data/5396-2041.pdf> for correct figure).

In the issue of 4 December, in the Research Article "X-ray crystal structure of the Fe-only hydrogenase (Cpl) from *Clostridium pasteurianum* to 1.8 angstrom resolution" by J. W. Peters *et al.* (p. 1853), the top of figure 1A (p. 1854) was cut off (the correct figure can be seen at <http://www.sciencemag.org/feature/data/5395-1853.pdf>). In the same issue, in the report "Oxygen isotope exchange between refractory inclusion in Allende and solar nebula gas" by H. Yurimoto *et al.* (p. 1874), figure 1 was not printed in half tones (see correct figure at <http://www.sciencemag.org/feature/data/5395-1874.pdf>).

In the same issue, in the report "Single-molecule enzymatic dynamics" by H. P. Lu *et al.* (p. 1877), two lines of text were covered by figure 1A (p. 1878). Those lines should have read, "the gel. With excess amounts of cholesterol (0.2...." And, again, in the same issue, in the report "Coupling of mitosis to the completion of S phase through Cdc34-mediated degradation of Wee1" by W. M. Michael and J. Newport (p. 1886), the top three parts of figure 1A (p. 1887) and all of figure 1C were missing. And parts of figure 3 (A, B, and C) (p. 1888) were missing (the correct figure can be seen at <http://www.sciencemag.org/feature/data/5395-1886.pdf>).

In the Policy Forum "The science and technology-bereft Department of State" by Anne Keatley Solomon (*Science's Compass*, 27 Nov., p. 1649), the last paragraph in the third column of page 1649 (carrying over onto page 1650) should have read, "Finally, basic S&T literacy for all State Department personnel is fundamental. Department leadership must make clear the relevance of this basic knowledge to Foreign Service officers. A clear signal early would be the inclusion in the entrance examination of questions testing a basic understanding of fundamental scientific concepts and the nature of scientific inquiry."

THE 1-MILLION-PIXEL DIGITAL CAMERA SYSTEM
No matter what your photomicroscopy application, you cannot get better image quality at a lower price than with a Pixera digital camera system. In fact, to match Pixera's million-pixel resolution, you would have to spend at least 5 times as much. And Pixera gives you everything you need, including a full suite of application software so you can visualize, create and communicate.

NOW—THE PERFECT TOOL FOR TELEMEDICINE.
You can capture two- or three-dimensional still or moving images directly to your PC, Mac, or laptop and then manipulate, organize, archive, and communicate those images via video conferencing or e-mail. A new PCI card makes the system unbelievably easy to install and to use. For more information, visit our web site at www.pixera.com or call toll-free 1-888-4-PIXERA.

CALL FOR SYMPOSIUM PROPOSALS

AAAS Annual Meeting and Science Innovation Exposition

February 17-22, 2000 • Washington, D.C.

You are invited to propose a symposium for the AAAS annual meeting.

Symposium Proposal forms, meeting theme track, and additional information available at:

www.aaas.org/meetings/scope

AAAS Meetings Office
1200 New York Avenue, NW
Washington, DC 20005
Phone: 202-326-6450
Fax: 202-289-4021
E-mail: confinfo@aaas.org

March 2, 2000
Deadline for proposals to receive consideration
