## THE USE AND ABUSE OF THE IONIC THEORY 1

## The Use and Abuse of the Ionic Theory: PROFESSOB GILBERT N. LEWIS ..... The Colleges of the United States and the Campaign against Tuberculosis: PROFESSOR W. H. NORTON ..... Proposed Publication of Euler's Works: Pro-FESSOR G. A. MILLER ..... 10 Report of the Committee to Visit the Museum of Comparative Zoology ..... 12 Scientific Notes and News ..... 13 University and Educational News ..... 15 Discussion and Correspondence:-Joint Meetings of Zoological Societies: PROFESSOR M. A. BIGELOW. The Birthplace of Leading Americans and the Question of Heredity: PROFESSOR FREDERICK ADAMS WOODS. Fair Play and Toleration in Criticism: PROFESSOR JOSEPH BARRELL. Determination of the Coefficient of Correlation: PROFESSOR KARL PEARSON. The Darwin Celebration at Cambridge: PROFESSOR A. C. SEWARD ..... 16 Quotations :---Vivisection ..... 25 Scientific Books :---Guttmann's Manufacture of Explosives: PROFESSOR CHARLES E. MUNROE. Knowl-

ton's Birds of the World: PROFESSOR FRAN-CIS H. HERRICK .....  $\mathbf{26}$ Special Articles :----A Simple Fabry and Perot Interferometer: PROFESSOR JAMES BARNES. Some Comments on the Reactions of Perichæta: PRO-FESSOR E. H. HARPER ..... 29 Entomological Conference on the Pacific Coast: W. B. HERMS ..... 30 Societies and Academies :---The Philosophical Society of Washington: R. L. FARIS 31

MSS, intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

TWENTY-FIVE years have elapsed since Arrhenius advanced the theory that acids. bases and salts in aqueous solution are dissociated into their constituent ions. Now that the storm of contention aroused by this doctine is clearing, it may not be inappropriate to consider in cooler blood this proposition of Arrhenius, to reinspect the foundations, and to weigh without prejudice the pros and cons, the successes and failures of the ionic theory.

To show that an electrolyte in solution suffers a change analogous to dissociation, Arrhenius brought forward evidence of three different kinds. First, he pointed out that the various methods of determining molal concentration in solution (freezing-point, boiling-point, vapor pressure, osmotic pressure), all of which are identical in principle and yield nearly identical results, indicate that in a salt solution the number of molecules dissolved, or less hypothetically the number of mols, is greater than the number calculated from the simple chemical formula of the salt.

The second argument rests upon the observation that in an aqueous solution of a strong electrolyte the properties are purely additive. Thus a dilute solution of hydrochloric acid has no properties which are peculiarly its own. It tastes sour, turns litmus red, dissolves metals, inverts sugar and possesses a number of other well-known properties, all of which are possessed in some degree by every acid. Moreover, it precipitates silver and mercurous salts, and
