FRIDAY, MAY 1, 1936

No. 2157

<i>Resuscitation with Carbon Dioxide:</i> PROFESSOR YAN-DELL HENDERSON	399
<i>Microphotographic Duplication in the Service of Science:</i> WATSON DAVIS	402
Obituary:	
<i>Arthur J. Weed:</i> DR. N. H. HECK. <i>Agnes Pockels:</i> DR. HARRY EAST MILLER. <i>Recent Deaths</i>	404
Scientific Events:	
<i>The Banting Research Foundation; Grants in Aid of Research of the American Academy of Arts and Sciences; Medal Day at the Franklin Institute; The American Philosophical Society</i>	405
<i>Scientific Notes and News</i>	407
Discussion:	
<i>Distribution of Termites:</i> PROFESSOR ALFRED E. EMERSON. <i>High Altitude Stratosphere Observations:</i> DR. L. F. CURTISS and DR. A. V. ASTIN. <i>Flood Injury to Trees:</i> DR. MALCOLM A. MCKENZIE. <i>Fish Mortality:</i> HEM SINGH PRUTHI	410
Scientific Books:	
<i>Insect Morphology:</i> PROFESSOR CLARENCE HAMILTON KENNEDY. <i>The Punched Card Method:</i> DR. DIRK BROWER	413
Reports:	
<i>Principal Decisions Concerning Nomenclature Made by the Sixth International Botanical Congress, Amsterdam (1935):</i> DR. T. A. SPRAGUE	416

<i>Special Articles:</i>	
<i>The Effects of Physiological Agents on Adult Tissues in Vitro:</i> DR. HENRY S. SIMMS. <i>Bacteriologic Experimentation on the Guinea Pig Fetus:</i> DR. ORAM C. WOOLPERT and OTHERS. <i>The Isolation from Cottonseed Oil of an Alcohol Resembling Alpha Tocopherol from Wheat-germ Oil:</i> DR. OLIVER H. EMERSON, GLADYS A. EMERSON and PROFESSOR HERBERT M. EVANS	418
<i>Scientific Apparatus and Laboratory Methods:</i>	
<i>A Further Improved Prospecting Pick:</i> DR. I. A. UPDIKE	421
<i>Science News</i>	10

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKEEN CATTELL and published every Friday by

THE SCIENCE PRESS

New York City: Grand Central Terminal

Lancaster, Pa.

Garrison, N. Y.

Annual Subscription, \$6.00

Single Copies, 15 Cts.

SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

RESUSCITATION WITH CARBON DIOXIDE¹

By Professor YANDELL HENDERSON

YALE UNIVERSITY

ON the morning of May 9, 1794, in the Place de la Revolution in Paris, Antoine Laurent Lavoisier died under the guillotine.

One hundred and seven years later (1901) Michael Foster in his history of physiology wrote:

As the sharp stroke of the guillotine severed his neck there passed away from this world, in his fifty-first year, this master mind of science, who had done so much to draw aside from truth the veil of man's ignorance and wrong thought; and there passed away too, the hope of his drawing aside yet other folds of that veil, folds which perhaps wrap us round even to-day.

What I have to say is concerned with one of those "folds of the veil of ignorance and wrong thought"

¹ Read before the American Philosophical Society, Philadelphia, April 23, 1936.

which it has been my good fortune to some extent to draw aside.

A few years before his death Lavoisier had demonstrated the true nature both of combustion and respiration—a fundamental likeness between fire and breathing. It is oxygen, both in combustion and in respiration (in its broadest sense), that unites with carbonaceous matter, liberates heat and produces carbon dioxide.

From this fundamental conception have come far-reaching practical applications and an understanding of the unities of nature that is even more important. We can now measure the energy expenditure of the body by determining the amount of oxygen consumed. We can compare, as Lavoisier suggested, the combustion in the working muscles of a laborer and the reasoning brain of a scientist. We see that respiration

ANNOUNCING

the first volume in the

McGRAW-HILL SERIES IN GEOGRAPHY

V. C. FINCH, *Consulting Editor*

ELEMENTS OF GEOGRAPHY

By V. C. FINCH

Professor of Geography, University of Wisconsin

and GLENN T. TREWARTHA

Associate Professor of Geography, University of Wisconsin

768 pages, 6 x 9, fully illustrated, with envelope of nine folding work maps. \$4.00

THE chief merit of this important new book for beginning courses lies in the choice of material, in the structure of its organization, and in the manner of its presentation. The selection of material has been made with a single objective: to describe and depict the major component elements of geographic landscape, and to enable the student to interpret the significance of their areal association. The structure of the book's organization includes (a) three opening chapters which provide a degree of orientation in the field of geography together with certain basic facts and geographical tools, and (b) three principal parts: the elements of natural earth, the elements of material culture, and the geographic realms. An outstanding feature of the book is the wealth of excellent illustrations. The plates which accompany the book have been prepared in blank for student drawing and coloring.

About the Series

The McGraw-Hill Series in Geography is intended to contribute to American college education by providing text and reference volumes that will keep pace with factual and philosophical developments in the field of natural environment, the regional and distributional aspects of human geography and in geographical methods and techniques. It is hoped also that the Series may have an important part in the advancement of the growing science of regions, the evaluation of their contents and the planning of their administration.

ELEMENTS OF PSYCHOLOGY

BY**KNIGHT DUNLAP**

Professor of Psychology in the University of California at Los Angeles; until January, 1936, Professor of Experimental Psychology in the Johns Hopkins University.

This new book offers teachers and students a text that will stimulate and inspire. It is not "an easy path for little feet" but is a text that will challenge both teacher and student to do their very best.

Obviously it is unfair to invest psychology with a bright cellophane wrapping and give the impression that it is a subject that can be approached with an air of flippancy and disregard—a subject that can be mastered with little or no effort. It is equally unfair to both teacher and student to invest psychology with an air of mystery and approach its study with fear and apprehension.

To master psychology is to master life. This new Dunlap book clearly, logically, and understandingly points the way to the successful teaching and understanding of general psychology.
