

# Watchdog!

for every  
nuclear  
laboratory

● A basic necessity for every nuclear laboratory is a beta-gamma monitoring instrument for checking bench and desk tops and determining safe approach distances. The Nuclear Model 2610A portable provides your laboratory with dependable protection against the harmful effects of radioactive isotopes and X-rays. You can make easy routine checks of every inch of your lab because the 2610A is arranged for fingertip control. The removable probe snaps into the handle for convenience. The proven circuit in a waterproof case gives you the reliable monitoring you demand for complete laboratory safety.

The 2610A is another of the many developments with which Nuclear engineers continually meet the ever increasing demands of nuclear science.
