

of time, but that he believed the "thousands of millions being spent by the United States and Russia to get a man into space is not warranted. He said, further: "Space travel will not be of great use to humanity. I think there will be great difficulty in getting such a spaceman back to earth safely."

Summer Program for High-School Students

The National Science Foundation has announced that this summer it will support 112 Secondary-School Student Training Programs at 105 colleges, universities, and nonprofit research organizations in 35 states, the District of Columbia, and Puerto Rico. This program is designed to provide secondary-school students of high ability with college-level summer work in science, mathematics, and engineering that is designed especially for them. As a result of successful experimental programs last year, the NSF 1959 summer program has been expanded to include additional institutions and represent wide geographic areas. In most instances the sponsoring institutions bear some of the costs. Total outlay by the foundation for this work this year will be approximately \$1.6 million.

Grants, Fellowships, and Awards

Neurology. The Public Health Service's National Institute of Neurological Diseases and Blindness recently reported on the status of its Special Traineeship Program in neurological and sensory disorders and called attention to additional opportunities for advanced study and research training. Since the inception of the program less than 3 years ago, 163 persons have received from 1 to 3 years of training at 48 institutions in the United States and 16 institutions in seven foreign countries.

To qualify for an award, a candidate should have an M.D., Ph.D., or other equivalent degree, and at least 3 years of training or experience pertinent to the training for which he seeks support. The applicant either must be an American citizen or must have filed a Declaration of Intent. Traineeship awards generally are made for not less than 9 months and not more than 1 year. However, all awards are subject to renewal for periods up to 5 years. Stipends are determined individually and may range from \$6500 to \$17,500 a year.

Requests for information about the Special Traineeship Program and application forms should be addressed to: Chief of Extramural Programs, National Institute of Neurological Diseases and

Blindness, National Institutes of Health, Bethesda 14, Md.

Science teaching. As a part of the AAAS Science Teaching Improvement Program, recently extended under a new grant to AAAS from the Carnegie Corporation of New York, a limited number of grants for research projects, averaging \$1000 each, will be made to science staff members of small colleges and teachers colleges. Consideration will be given only to proposals in which pre-service science teachers will be involved in the research project. The first grants will be made early in June. For additional information, write to J. R. Mayor, Director of Education, AAAS, 1515 Massachusetts Ave., NW, Washington 5, D.C.

News Briefs

The complete works of the late Irving Langmuir are being collected for publication as a set of six volumes by Pergamon Press, Inc., of London and New York. Langmuir, who was associated with the General Electric Research Laboratory from 1909 until his death in 1957, was the first American industrial scientist to receive a Nobel Prize. A group of 29 scientists from many different countries will serve as members of an editorial advisory board, which will be under the chairmanship of Guy Suits, vice president and director of research at General Electric. Peter Debye of Cornell University and Sir Eric Rideal of the Imperial College of Science and Technology, London, are deputy chairmen of the editorial group.

The National Aeronautics and Space Administration has announced that the first two space sciences working groups have been formed and 13 government, university, and industrial scientists have accepted membership on them. The new groups are Orbiting Astronomical Observatories, to be headed by Nancy Roman of the NASA Office of Space Sciences, and Satellite Ionospheric Beacons, with J. C. Seddon of the NASA Space Projects Center as chairman. A number of such NASA groups are being planned under a program that is directed by Homer E. Newell, Jr., NASA assistant director for space sciences.

The first issue of the *Bulletin of the International Atomic Energy Agency* was released last month. The new publication is available in English, French, Russian, and Spanish; it will appear quarterly. The purpose of the bulletin is to disseminate information about IAEA in layman's language. Effective dissemination will depend on the extent to which the material presented is suitably reused,

for the bulletin itself will not have a mass circulation. For information write to the Division of Public Information, IAEA, Vienna, I, Kärntnerring, Austria.

A generally downward trend in rates of mortality from heart disease among persons in middle life in the United States is reported for the 8-year period 1949 through 1956 by the Metropolitan Life Insurance Company. This is in sharp contrast to the generally upward trend prior to 1949. Heart disease, however, continues to be the most serious health problem among people in the 45-64 age group, accounting for two-fifths of the total number of deaths and constituting a major cause of sickness and prolonged disability. The death rate from heart disease in the United States during 1955-56 for individuals in that age group averaged 6.8 per 1000 for white males and 2.4 for white females, a ratio of nearly 3 to 1.

A ground-breaking ceremony will be held on the site of the new National Library of Medicine building on the grounds of the National Institutes of Health, Bethesda, Md., on 12 June. Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare, will deliver a short address. Senator Lister Hill, coauthor of the National Library of Medicine Act, will turn the first spadeful of earth. The chairman of the Board of Regents of the National Library of Medicine, Champ Lyons, will be the chairman of the proceedings.
