Why a new Pharmacology textbook?

If you have taught or practiced pharmacology during the past 20 years, you have witnessed the tremendous change in the practice of medicine. You have watched the introduction of an enormous number of new drugs each year; the rapid changes in therapy; and finally more recently, the growing demand that the teaching of medicine be changed to better equip the medical student to make intelligent decisions on his own—particularly in the selection of drugs.

Ready This Month! Goth MEDICAL PHARMACOLOGY Principles and Concepts

This new pharmacology textbook provides a new approach to the problem of equipping today's medical student with the sound understanding of the fundamentals, principles and concepts of pharmacology that can guide him in making intelligent therapeutic decisions.

Many other pharmacology textbooks still attempt the impossible task of giving more and more definitive medicine and treatment, amassing encyclopedic listings of practically all drugs. This new book presents for the first time a concise, excellently written account of those principles of pharmacology that the student requires for his future growth. It concentrates on the actual mechanism of the disease and the reaction of the drug on the specific tissue, organ, or system of the body. This is the essence of real pharmacologic knowledge for the modern practitioner of medicine.

Principles of absorption, excretion, distribution, drug metabolism and detoxication processes, toxicity and drug hypersensitivity are discussed in detail, including many current concepts not yet available in most other volumes. Great saving of reading time is effected by eliminating repetitious discussions of compounds which have little practical or theoretical importance.

By **ANDRES GOTH, M.D.**, Professor of Pharmacology and Chairman of the Department, The University of Texas Southwestern Medical School, Dallas, Texas. Ready later this month. Approx. 584 pages, 6¾" x 9¾", 49 illustrations. About \$11.00.

Gladly sent to teachers for consideration as a text!

Calcification in Biological Systems

AAAS Symposium Volume No. 64

Edited by R. F. Sognnaes

July 1960

526 pp., 283 illus., \$9.75,
AAAS members' cash orders, \$8.50

This monograph deals comprehensively with the mechanism of mineral deposition throughout the animal kingdom. Current research approaches, findings and hypotheses are presented by investigators representing disciplines ranging from physical chemistry and histochemistry to electron microscopy and tissue culture. The central theme revolves about the question, "Why do certain normal and pathological tissues calcify?"

The 22 chapters are organized in an evolutionary sequence; (1) calcification within unicellular organisms and various lower animals, that is, the shells of the mollusc, the gastrolith and exoskeleton of the lobster, the mineralizing leg tendon of the turkey and the otolithic organ of the rat; (2) elements and mechanisms involved in the calcification of cartilage, bone, dentin, enamel and various pathological concretions; (3) experimental observations in organ transplants and in tissue culture; and culminating with (4) the physical and chemical nature of and relationship between the ultimate inorganic and organic building blocks most typical of normal calcification in the human organism.

New Products

The information reported here is obtained from manufacturers and from other sources considered to be reliable. Neither Science nor the writer assumes responsibility for the accuracy of the information. All inquiries concerning items listed should be addressed to the manufacturer. Include the department number in your inquiry.

■ **VIBRATION METER** provides standardized simultaneous output signals of displacement, velocity, and acceleration by double integration of the output of a piezoelectric accelerometer. A dial adjustment is provided that permits adjustment for accelerometer sensitivity to provide output of 1 volt/in. and 1 volt/grav. The velocity signal is standardized to 96.4 mv (r.m.s.)/in. per sec. A 25-ft., driven-shield cable is furnished to reduce cable capacitance effects. (Unholtz-Dickie Corp., Dept. Sci178, 2994 Whitney Ave., Hamden, Conn.)

■ **VOLTAGE-TO-FREQUENCY CONVERTER** is a completely solid-state device available in eight models, which provide full-scale output frequencies of 30 to 25,000 cy/sec. The maximum full-scale frequency is adjustable over a 4-to-1 range. Input ranges available are 0 to 1, 0 to 10, and 0 to 100 volts. Input-output linearity is said to be ± 0.25 percent. Linearity of ± 0.1 percent is available. (Pioneer Magnetics, Inc., Dept. Sci176, 850 Pico Blvd., Santa Monica, Calif.)

■ **SIGNAL COMMUTATOR** is a solid-state multiple-input commutator that produces full-scale output voltages of 5 or 10 from millivolt-level sources such as thermocouples, strain gages, and the like. The basic module provides 16 channels; the suggested maximum scanning rate for one module is 2 kcy/sec; time interlacing two or more modules permits higher output rates. Input is balanced and isolated with nominal $\pm 50 \mu a$ for full-scale output; resistance of input winding is 20 ohms. Output is unbalanced, ± 5.0 volts into 5000-ohm load with load capacitance of 0.02 μf maximum and maximum sampling period of 10 msec. Linearity is said to be better than ± 0.2 percent of full scale. Cross-talk is said to be less than 0.1 percent of full scale with application of full-scale input to any other channel, and less than ± 0.3 percent with application of 10 times the input to any other channel. Gain stability is specified as ± 0.1 percent per day after a 2-hr warmup, and zero stability ± 0.35 percent per week after a 4-hr warmup. Each channel has a balance control that allows output voltage for zero reference or initial input to be set at any reference level between ± 5 volts, and each channel is provided with a range potentiometer to set its voltage sensitivity and a jack to insert calibrating voltage. (San Diego Scientific Corp., Dept. Sci182, 3434 Midway Dr., San Diego 10, Calif.)

Fig. 1. Vibration isolation table.

■ **VIBRATION ISOLATION TABLE** (Fig. 1) is designed to isolate sensitive equipment from horizontal vibration. The table consists of two platforms separated by three steel balls. An instrument placed on the top platform is isolated from a maximum of $\frac{1}{2}$ -in. peak-to-peak horizontal motion of the lower platform, and the latter is similarly isolated from horizontal motion of the top platform caused by a supported vibrating device. No resilient support that may change with time is used, so that the table, once leveled, will remain level for an indefinite period of time. (Tenlo Research, Inc., Dept. Sci173, 9424 Lyndale Ave. South, Minneapolis 20, Minn.)

POSITIONS WANTED

Biologist, Ph.D., 5 years' experience, desires teaching-research position, Northeast or Midwest. Box 95, **SCIENCE**. 5/12

Botanist, Ph.D. June; experimental plant embryology, tissue culture, and biochemistry. Desires research or teaching position. Box 92, **SCIENCE**. 5/5

Botanist, experienced in university teaching, publications. Box 96, **SCIENCE**. X

Chemist, Ph.D. inorganic, minor physical; 8 years at large university; 4 years at outstanding research institution; since 1959, industry. Specialties nonaqueous chemistry, electrochemistry. Age 48, family. East Coast. Box 98, **SCIENCE**. X

Cytochemist-Immunologist Ph.D. (1955). Broad background in zoology, virology, and experimental pathology. Academic appointment in high-caliber medical or graduate school or top-ranking college desired. Location secondary to teaching and research facilities. Assistant professor, \$9000 (minimum). Box 100, **SCIENCE**. X

Medical Biologist, Ph.D., D.V.M. Virology, tumors; clinical experience. Administrative, research, teaching experience. Major academic appointment only. Box 94, **SCIENCE**. X

Microbiologist, Ph.D.; 8 years of teaching experience. Research with viruses in animals and cell cultures. Desires academic appointment with teaching and research. Available 1 July 1961. Box 99, **SCIENCE**. 5/12

(a) **Organic Chemistry** Ph.D., physical chemistry minor; experienced in drug synthesis and product development; prefers pharmaceutical development, technical director of medicinal chemistry, or administrative appointment. (b) **Cytology** Ph.D., hematology, radiochemistry minors; experienced in cancer and blood research, teaching and administrative duties; interested in clinical or academic teaching with research opportunity. (Please write for information regarding these and other scientists in all fields; nationwide service.) S5-1 Medical Bureau, Inc., Science Division, Burneice Larson, Chairman, 900 North Michigan Avenue, Chicago. X

Pharmacologist, B.S., male; 11 years of industrial pharmaceutical research. Publications. Desires challenging industrial position. Box 101, **SCIENCE**. 5/12

Plant Physiologist, Ph.D., dismissed for "unsatisfactory teaching," subsequent to participation in peace walks and favorable reports on trip to Cuba, desires position teaching general botany and/or beginning plant physiology, or doing research such as water relations, translocation, mineral nutrition; 6 years of college teaching experience; age 52. Box 93, **SCIENCE**. X

Research M.D. Original major papers in clinical, biochemical, physiological research—sole author. Patents (pend.). Associated fields of competence: zoology, physics, chemistry, mathematics. Other major avocational works. Age 31. Married. Recent release from service (USAF research laboratory). Desires position in department of experimental medicine or equivalent. Box 97, **SCIENCE**. X

POSITIONS OPEN

EDITORIAL ASSISTANT

To help determine acceptability of papers, with aid of journal's scientific advisers. Also to edit manuscripts. Scientific background necessary. Editorial experience helpful. Salary open. Washington, D.C. Box 61, **SCIENCE**.

Research assistant, female.—Experience in tissue culture and virology. Research and teaching. Prefer M.S. in virology or biology. Send summary of training to **Personnel Director, Baylor University College of Medicine**, 1200 M. D. Anderson Boulevard, Houston 25, Texas.

VIROLOGIST

To plan and conduct investigational, diagnostic, base-line, and surveillance studies of viruses and related organisms in the Hawaii state public health laboratory. Requires 2 years' experience in propagating, detecting, and identifying viruses and completion of graduate work leading to a Ph.D. in virology, bacteriology, or a related field. Salary \$8256–\$10,536 per annum. Write to Department of Personnel Services, 825 Mililani Street, Honolulu 13, Hawaii.

COURSES

INTRODUCTION TO GENERAL PATHOLOGY

for graduate students and investigators
who do not have a medical background

26 June–15 July 1961

HARVARD MEDICAL SCHOOL, Boston, Mass.

The course will be geared to graduate students and Ph.D.'s. It is intended to present the most important areas of General Pathology to investigators in the biological field who do not have a medical background, and wish to become acquainted with the basic mechanisms of disease at the level of cells and tissues.

Experimental methods will be emphasized. The course will consist of lectures, laboratories, and demonstrations. The following areas will be covered:

**DISEASE AT THE LEVEL OF CELLS – INFLAMMATION –
CIRCULATORY DISTURBANCES – TUMORS – ALLERGY**

No Tuition. A limited number of fellowships will be available.

Information: Dr. G. Majno, Department of Pathology, Harvard Medical School, 25 Shattuck Street, Boston 15, Mass.

FELLOWSHIPS

RESIDENCY IN EPIDEMIOLOGY

A 3-year residency in epidemiology is now offered by the New York State Department of Health. In this residency a small number of physicians and others with doctorates in related fields will be trained as epidemiologists. Heavy emphasis will be placed on the coordination of clinical, laboratory, and field investigations, and on research methods, particularly as applicable to diseases of noninfectious and unknown etiology.

Fellows in this program during the first year will work with practicing epidemiologists concerned with both applied and research problems. They will also have opportunity to observe other public health activities during this period. During the second year Fellows will be expected to attend one of the 11 graduate schools of public health and to meet the full requirements for the Master of Public Health degree. The terminal 16 months of the fellowship will be spent in substantially independent research. Those with appropriate previous experience may enter the program at the second- or third-year level.

Fellows will receive full support, tuition, and dependency allowances throughout the 3 years.

Requests for application forms and additional information should be addressed to William Haddon, Jr., M.D., Director, Epidemiology Residency Program, New York State Department of Health, 84 Holland Avenue, Albany 8, New York.

POSITIONS OPEN

(a) **Professor-Chairman Physics Department** to develop research program with some teaching at state university with new science center. \$9000–\$11,000 year, 9-month basis; Midwest. (b) **Pharmacology Assistant Professor** for teaching and individual research at medical school; around \$8000–\$9000; Midwest. (c) **Senior Cancer Research Scientist** qualified in biochemistry for studies on mammary tumors at large research institution; East. (d) **Pharmacologist** for studies on activity of untested new chemicals for expanding pharmaceutical firm; around \$10,000; Midwest. (e) **Biochemist** to head division in private laboratory of pathologists serving many hospitals; around \$10,000; Southwest. (f) **Animal Physiologist** for research on reproduction with limited graduate teaching at agriculture experiment station of leading university; \$7300 up; East. (g) **Control Chemist** for new ethical pharmaceutical unit of established firm; \$8000–\$10,000; Midwest. (h) **Veterinarian** for clinical evaluation of new products and technical services with pharmaceutical firm. (i) **Agricultural Biochemist** for studies on flavor and enzyme systems of peanut plants at experimental station of university offering academic rank and benefits; \$9000; South. (j) **Teaching Appointments** in biology, physics, chemistry, zoology, botany at various liberal arts and state teachers colleges. (Please write for details; also many other positions available through our nationwide service.) S5-1 Medical Bureau, Inc., Science Division, Burneice Larson, Chairman, 900 North Michigan Avenue, Chicago.

INFRARED DOUBLE-BEAM RECORDING SPECTROPHOTOMETER

Model NK-1 features fastest scan for a given resolution and higher ultimate performance than any other commercial IR prism instrument

A new IR instrument with new versatility which makes it ideal for both routine control and most research investigations.

... a new and thoroughly researched *Automatic Scan Control* and *Accelerated Scan Program*

... covers the 2-16 micron region in 4 minutes rather than the 14 minutes previously required — with no sacrifice in performance!

... 100 mm x 80 mm prism, wide globar source and sealed bolometer detector combine to pro-

vide highest ultimate resolution and signal-to-noise ratio.

... Covers wavelengths from 0.2 μ to 38 μ (with attachments).

... Wide line of accessories include 20-meter gas cell, ultra-micro liquid and gas cells, micro-beam condensing system.

Write today for more information on this pace-setting B/A instrument.

Pyrex Achievement Award for outstanding sales of PYREX LABORATORY GLASSWARE

As in the three former years since establishment of the award by the Corning Glass Works, we are again recipients of the Steuben crystal trophy for outstanding sales of Pyrex laboratory ware.

We regularly list and stock more than 1,500,000 pieces of Pyrex ware—not including Tubing or Rod—and are therefore prepared to make immediate shipment of orders for either large quantities or varied assortments.

See our new 1961 catalog for current listings of the widest assortment of Pyrex laboratory glassware available from any single source.
