new electronic hematocrit gives direct readings instantly

YSI Model 30

Price \$250.00

The YSI electronic micro-hematocrit is a complete, portable measuring system for a single instantaneous hematocrit measurement. You will also find it a useful and versatile auxiliary to your laboratory-bound centrifuge equipment.

The YSI Model 30 is particularly suited to emergency and operating room use and for bedside or outpatient analyses. It's ideal for those situations requiring a series of accurate hematocrit readings in rapid succession.

Based on the insulating characteristics of red blood cells, it uses a four transistor circuit powered from self-contained batteries to give direct reading hematocrit on .02 cc. of whole or heparinized blood.

Weighs 2½ lbs. 4" x 5½" x 6½".

Get complete specifications from your YSI dealer or write:

PROBLEMS IN ORGANIC CHEMISTRY

This is a well-organized set of problems that offer a potent supplement to courses in organic chemistry. The problems emphasize the chemical and physical properties of functional groups and are fitted to the one-year course. Fundamental concepts and theory as well as the chemical and physical properties of organic compounds are considered. The nomenclature is clarified in each chapter.
