must a cactus watch the birdie?

Yes, if it's a cloudy, windy day as it was when this mountain succulent's portrait was made by a Honeywell Pentax at 1/60 sec., f/16.

You ordinarily don't think of a flower as a moving target—until you catch one wavering in your viewfinder. Then you increase shutter speed, open up the lens, and—oops, there goes your depth of field! Pretty petal, poor pistol.

Use a Honeywell Prox-O-Lite on your camera and you do two things: (1) stop motion, and (2) permit smaller apertures for maximum depth of field. The Prox-O-Lite is an electronic flash unit which fits right on your lens mount to surround your subject with shadowless light.

See the Prox-O-Lite at your Honeywell dealer's today. Or write for illustrated brochure to David
