#### This laser gets straight A's in classroom optics

The availability of a quality gas laser for introductory and intermediate optics courses has lightened the teacher's task and brightened the student's understanding. Demonstration experiments in physical and geometrical optics, using a visible gas laser as the light source, now enable the entire class to see what was once limited to individual observation in the laboratory.

The Spectra-Physics Model 130 helium-neon CW gas laser, self-contained, completely portable, and only 13½" long, is every inch a precision instrument, yet is built to absorb the punishment of everyday classroom use. With it you can perform all the essential experiments dealing with lens aberrations, interference and diffraction phenomena, the Abbe theory, Doppler shift, and others. Enough light is available so that point images and interference patterns can be viewed conveniently by projection, even in broad daylight.

The Model 130 is already in use in many school classrooms. But before writing it into your budget you may want to look at detailed catalog information. We'll also be pleased to send you a copy of our Laser Technical Bulletin No. 3, "Some demonstration experiments in Optics using a gas laser." Write us on your letterhead at 1255 Terra Bella Avenue, Mountain View 13, California.

## The Sage Syringe Pump

gives precise, reproducible flow rates...available in models having discrete or continuously adjustable rates.

The Sage Syringe Pump drives any of a number of different size syringes up to 100 cc capacity, pumps uniformly against back pressures of 300 mm of Hg and up, operates simply and reliably.

Model 234 (illustrated) offers discrete rates, consists of a compact box housing a synchronous motor. Above the box are gears (interchangeable for different rates) which engage mating racks on a driving carriage which drives any of 5 different size syringes. Reproducibility is  $\pm 0.1\%$ .

Continuously variable speed models include a separate control box which is unaffected by line voltage changes and gives flow rates over a wide range reproducible within  $\pm 0.5\%$ .

### Constant Speed Models

Model 234  
(for syringes up to 10 cc size) \$145

Model 249  
(for syringes up to 100 cc size) \$215

### Variable Speed Models

Model 237  
(for syringes up to 10 cc size) \$325

Model 255  
(for syringes up to 100 cc size) \$395

**Both Centrifuge  
Tubes are Clear  
as Glass . . .  
Only ONE is  
Unbreakable!**

**The one from Nalge!**

Nalgene® centrifuge ware, both tubes and bottles, are now molded from improved polycarbonate resin . . . transparent as glass but happily, unbreakable. Polycarbonate is tough and robust, with a strength approaching that of metal, yet endowed with the clarity of a show window.

In or out of the machine, you can banish any fear of breaking, cracking, chipping . . . even of denting. Nalgene tubes and bottles are nontoxic, non-contaminating, corrosion resistant . . . and performance standards are excellent. Spin at 20,000 RPM or more. Subjected to extremes of temperature . . . chilled to -100°C. or heated to +135°C. . . there are no adverse effects. And fully autoclavable, too.

Round or conical bottom tubes available, from 3.5 ml to 100 ml capacity. Conventional flat bottom or new spherical bottom bottles in 250 ml capacity.

For information on the full line of Nalgene labware, see your lab supply dealer or write Dept. 2704A, The Nalge Co., Inc., Rochester, N.Y. 14602.

**Reductions of  
30% or more!**

High quality Nalgene® centrifuge tubes are strong, versatile, unusually clear. Now priced so low, it justifies using them as disposables or for one time applications.

Nalge . . . maker of the most extensive laboratory line in plastics . . . has accomplished a technical breakthrough so remarkable that the price of polypropylene tubes has been reduced 30% or more. A large variety of sizes is available . . . each size fits standard centrifuge tube holder. Autoclavable under standard conditions. And, at these low, low prices they may even be used as test tubes.

Whatever your needs, look to Nalgene centrifuge ware . . . today's most complete line. You'll find a variety of resins . . . polypropylene, conventional polyethylene or polycarbonate . . . in many sizes and shapes. For information on the full line of Nalgene labware, see your lab supply dealer or write Dept. 27041, The Nalge Co., Inc., Rochester, N.Y. 14602.

## NEW! BEAM-SAMPLING LASER ENERGY MONITOR ACCURATELY MEASURES EVERY LASER PULSE DURING EXPERIMENTATION

Now, for the first time, you can obtain a direct readout of total energy or peak power of every laser pulse during your research. You can measure the energy output of a laser in action . . . and eliminate the need of interim laser operations for measurement purposes only.

The new MI-2 Laser Energy Monitor features a beam-sampling technique that permits the instrument to be directly incorporated into any test set-up. It permits you to obtain an unprecedented degree of reliability and control in your test procedures.

The Laser Systems Center's MI-2 provides direct meter readout of total energy in ranges from 0.003 joule to 1000 joules. Measure peak power? Yes! . . . up to one gigawatt! Factory calibrated for 6943 angstroms, the Laser Energy Monitor can be used with conversion charts to cover the spectrum from 0.35 to 1.13 microns. Connections are provided for observing peak power outputs with an oscilloscope or strip-chart recorder. Laser Energy can be conveniently read at any time during 30 seconds after laser operation because of a unique electronic holding circuit.

LSI's MI-2 Laser Energy Monitor is available now. It can add significantly to the progress of your laser research. For complete details, call or write today for Bulletin S 312-3.

THE MI-2 LASER ENERGY MONITOR . . .  
NOTHING QUITE LIKE IT!

## SCAN-A-TRON

from Gelman Innovation "Wonderland"

**Q. Why the Happy Cat?**

**A.** This cat uses a new Gelman Scan-A-Tron. Now, he makes electrophoretic separations many times faster because he no longer must rely on paper as his support media. He uses Sepraphore III† —the world renowned cellulose polyacetate.

**Q.** And separations are many times faster?

**A.** That's right.

**Q.** More clear and reproducible, too?

**A.** Yes.

*FACT: No wonder he's happy!*

**Q. and the  
Sad Cat?**

**A.** That's an unfortunate tale. He hasn't yet heard about using the Gelman Scan-A-Tron with his Analytrol\*. He's still using paper support media.

**Q.** You mean he has to wait overnight for separations before he can scan them?

**A.** That's right, but he'll surely learn soon.

**Q.** How does he find out all about Scan-A-Tron and its benefits?

**A.** Ask Gelman! Ask S/P! Use the coupon below.

## Bronwill brings you Godfrey Stereomodels

Can you match these Stereomodels with their correct names? See bottom of page.

## SEE SKELETAL STRUCTURE...ACTUALLY MEASURE INTERNUCLEAR DISTANCES

**GODFREY STEREO MODELS** are of tremendous importance to teachers, students and research chemists. They present chemical relationships better than ever before possible. You can see skeletal structure . . . how atoms are linked . . . whether they are stable . . . and why. You can even measure internuclear distances with remarkable accuracy . . . a precise, 250,000,000 $\times$  magnification of all elements is ingeniously maintained (2.5cm = 1Å). Bond angles are correct, too. Elements are all vividly, solidly and permanently colored throughout . . . and virtually unbreakable, too! Free rotation about single bonds is demonstrable . . . yet structures will remain locked in any preset position. Boat or chair conformation of cyclohexane show their natural stability . . . even intermediate twist conformations can be fixed in position for handling and measurement.

The basic kit is supplied, at no extra charge, with a large variety of structural components . . . olefinic and aromatic double bonds, acetylenic triple bonds, the benzene ring, amide and nitrile groups, as well as tetrahedral and trigonal carbon and nitrogen, digonal oxygen and sulfur, hydrogen and the halogens . . . at a price, one-third of any competitive units. No tools are required for any assembly . . . simple, quick, hand connections only. Connector tubes have positive, snap-lock connections, with built-in torsional friction. Large, complex models (synthetic polymers, proteins, polysaccharides) can be assembled and handled without inadvertent disruption.

**STEREOMODELS IN TOP PHOTO:** A. Methylacetylene; B.  $\alpha$  Phenoxyethyl Penicillin; C. cis Decalin; D. Bicyclo [2.1.1.0^5.6] hexane-5 (N-t-butyl) carboxamide; E. 6-Trifluoromethyl-7-sulfamyl-3,4-dihydro-1,2,4-benzothiadiazine 1,1-dioxide.

It would have been easier if they were visible in their full, identifying colors. Write today for full color brochure.
