American Meteorological Society, the Central Radio Propagation Laboratory of the National Bureau of Standards, and the U.S. Weather Bureau. It was organized under the general chairmanship of J. S. Marshall (McGill University and chairman of the Joint Committee of the URSI-UGGI on Radio Meteorology). Members of the Program Committee were John A. Saxton, chairman (United Kingdom Scientific Attache to the United States and vice chairman of Commission II, URSI), Stuart Bigler (U.S. Weather Bureau), David Atlas (Air Force Cambridge Research Laboratory), Jack W. Herbstreit (Central Radio Propagation Laboratory and secretary of Commission II, URSI), and J. S. Marshall. It is believed that the objective of the conference, to strengthen the community of interest among the many specialized fields in radio meteorology, was realized. A limited number of copies of the proceedings volume are available from the American Meteorological Society, 40 Beacon St., Boston, Massachusetts.

for research, medicine and industry

Leeds & Northrup laboratory-type pH Meters

Now there are *three* laboratory-type L&N pH Meters available from us. All are direct-reading (7" scale), line-operated, drift-free, temperature compensated, and feature fast warm-up time ... quick response!

New **Model 7403-A1** provides both continuous and expanded ranges for pH and millivolts. It has 5 scales, 7 ranges, 6 controls. You can obtain accurate temperature compensation on any 2 pH span ... switch from one 2 pH span to any other without re-buffering! A rotatable numeral-wheel, window-indexed at mid-scale, lets you identify the expanded span in use.

Model 7405-A1 features an expanded scale covering the span most frequently used—in addition to the normal 0 to 14 pH range. It, too, lets you select any 2 pH span you wish over the entire range. *Very* convenient for repetitious analyses.

Model 7401-A1 is a standard pH Meter with 3 scales, 5 ranges, 4 controls ... popular in laboratories throughout the world.

ASTO

Difco reagents for the diagnosis of Group A Streptococcal Infections

- RHEUMATIC FEVER
- GLOMERULONEPHRITIS

ANTISTREPTOLYSIN O TITERS (ASTO) and their relation to pathological conditions in Group A streptococcal infections have established the importance of this determination as a routine clinical test.

Bacto-Streptolysin O Reagent—a dehydrated, standardized and stable reagent requiring only rehydration with distilled water. Antistreptolysin O titers have been impractical for routine diagnosis because of the difficulties in preparing the reagent. Bacto-Streptolysin O Reagent is a standardized preparation permitting the routine performance of this diagnostic test in all clinical laboratories.

Bacto-ASTO Standard—an antiserum titrated in Todd units for use as a control in the determination of antistreptolysin O titers.
