DIFCO

ASTO

Difco reagents for the diagnosis of Group A Streptococcal Infections

- RHEUMATIC FEVER
- GLOMERULONEPHRITIS

ANTISTREPTOLYSIN O TITERS (ASTO) and their relation to pathological conditions in Group A streptococcal infections have established the importance of this determination as a routine clinical test.

Bacto-Streptolysin O Reagent—a dehydrated, standardized and stable reagent requiring only rehydration with distilled water. Antistreptolysin O titers have been impractical for routine diagnosis because of the difficulties in preparing the reagent. Bacto-Streptolysin O Reagent is a standardized preparation permitting the routine performance of this diagnostic test in all clinical laboratories.

Bacto-ASTO Standard—an antiserum titrated in Todd units for use as a control in the determination of antistreptolysin O titers.

Biochemist—Ph.D. or M.S. with some background in microbiology. Conduct studies on isolation and assays of enzymes, nucleotides, and other natural products. Submit resume with salary requirements to **Personnel Dept., Nutrilite Products, Inc., 5600 Beach Blvd., Buena Park, Calif.**

BIOCHEMIST-PROTEIN

Postdoctoral or established investigators. Research in collaboration with hospital-affiliated group devoted to eye research and problems of tissue formation and repair in the areas of protein composition and synthesis in transparent tissue. \$7000 to \$13,000.

Box 3, SCIENCE

PHYSIOLOGIST-BIOCHEMIST

Unique opportunity for a Ph.D. with training in Biochemistry and Physiology and interests in drug research and development. To provide essential liaison between laboratory and clinical scientists, aid in evaluating scientific data and help plan R&D activities. Occasional travel and attendance at scientific meetings is an integral part of this position. Prior industrial experience is not required.

MICROBIOLOGIST-Ph.D.

An opening has recently developed in our Infectious Disease Department for which we are seeking a Bacteriologist with biochemical training. Duties will involve the investigation of various infectious disease processes in animals and their biochemical manifestations. Following the establishment of sound basic information, the program will be expanded to include the study of the effects of new pharmacological agents on these processes.

Please send curriculum vitae as well as salary requirements to: **Cyrus M. Greenberg, Ph.D., Director of Scientific Employment, SMITH KLINE & FRENCH LABORATORIES, 1566 Spring Garden Street, Philadelphia, Pa. 19101.** An Equal Opportunity Employer.

FELLOWSHIPS

Biophysics Training Program Fellowships

Applications are invited from candidates with M.S. or Ph.D. degrees in either physical or biological sciences. A major aspect of the program is the conduct of a specific research project and current studies include problems in radiobiology, neutron activation and neutron dosimetry, processing of biological data and medical engineering. Training stipends in the range of \$5000-\$6500. Further information from Dr. G. L. Brownell, Head, Physics Research Laboratory, Massachusetts General Hospital, Boston 14, Massachusetts.

Fellowships for Chemists or Biologists for graduate study in Water Technology. Course work in major field plus survey of water and waste treatment. Undergraduate B average minimum. \$230 to \$260/month, 9 or 12 months. Dr. W. A. Parsons, Department of Civil Engineering, Virginia Polytechnic Institute, Blacksburg, Virginia.

TRAINEESHIPS FOR GRADUATE WORK IN PHARMACOLOGY

A 4-year program of course work and research training leading to the Ph.D. degree is offered. U.S. citizens only. Research in fundamental mechanisms of drug action. Starting annual stipend \$2400 plus tuition and \$500 per dependent. Early application for September 1965 strongly advised. Write: Department of Pharmacology, School of Medicine, State Univ. of New York at Buffalo, 122 Capen Hall, Buffalo, N.Y. 14214.

**Why
we can predict
this revolutionary
microscope will be
widely imitated.**

This remarkable microscope by American Optical features an infinity-corrected optical system, the most significant basic improvement in microscope design made in this century. It provides two major performance breakthroughs which, we can safely predict, will cause other microscope manufacturers to imitate its design.

First, the new infinity-corrected optical system provides a flatness of field and optical performance never before obtainable. This means crisper, sharper visual images and markedly superior photomicrographs that are flat from edge-to-edge and corner-to-corner of the print. Secondly, the new optical system makes possible a vastly improved focusing concept. Only the objective moves when you focus . . . body and stage remain motionless. The rack-and-pinion, source of 80-90% of all breakdown and maintenance problems, is eliminated. The entire focusing mechanism is enclosed in the arm, lubricated for life and sealed.

Superior optical performance and virtually maintenance-free mechanical performance — two big reasons why this microscope will be widely imitated. We don't mind. We've been imitated many times before! American Optical Company, Instrument Division, Buffalo, New York 14215.
