clarity!

Instant inspection of animals at all times. That's one of the outstanding features of clear polycarbonate and acrylic cages made by Lab Cages. Not just visibility but brilliant clarity! And if you require opaque cages, disposable cages, restraining cages, feeders, water tubes or cage racks, Lab Cages assures you of the most up-dated line. Lab Cages is also exclusive sales agent for **AB-SORB-DRI®** animal bedding, produced by Michael Wood Products, Inc., Garfield, N. J. It's the all-wood bedding that has been tested and approved by major laboratories and breeding colonies across the country.

ZEISS

The Zeiss Research Metallograph with new Auto-leveling Stage combines the advantages of both upright and inverted (LeChatelier-type) microscopes: (1) The specimen, held from below against a precisely-aligned plane surface, is automatically positioned perfectly perpendicular to the optical axis. (2) Because you view from above, specific areas of specimens are easier to locate. (3) Immersion media can't drip onto objective mounts. (4) All components and openings are protected from dust and dirt because they face downward.

Simple to operate (no specialized training required), the Zeiss Research Metallograph offers outstanding versatility: use reflected light, transmitted light, or both simultaneously . . . select any of 3 light sources (tungsten, high-pressure mercury burner or carbon arc with automatic feed) . . . use phase contrast for hard-to-etch specimens . . . use Antiflex Objectives equipped with adjustable compensating devices to increase contrast of low-reflectance petrographic specimens . . . use special accessories for all types of polarization . . . take sharp, perfectly focused 4 x 5 photomicrographs at the touch of a button . . . use Luminar macro lenses for sharp, wide-angle and evenly illuminated macrographs at magnifications as low as 6.5x . . . take survey photos of samples up to 60mm in diameter . . . use 4 x 5 plate, sheet film or Polaroid 500 (35mm attachment also available). Power controls and drawers with fittings for accessories are included in the instrument table.

For more information, write Carl Zeiss, Inc., 444 Fifth Ave., New York, N.Y. 10018. In Canada: 140 Overlea Blvd., Toronto. COMPLETE SERVICE FACILITIES AVAILABLE.

Analog-digital conversion handbook presents comprehensive information on all phases of conversion, from concepts to calibration. Diagrams supplement the 73-page text; tables summarize terms, methods, and performance characteristics. Chapter 1 covers "Basic elements of conversion": definitions, terms, methods of digital-to-analog (DA) and analog-to-digital (AD) conversions, the sample and hold technique, and multiplexing. The remaining six chapters cover: "Measures of converter performance"; "Special AD conversion techniques"; "Typical converter logic"; "Basic circuits; interconnection and calibration"; and "Testing an AD convert." Four appendices review basic digital numbers, bipolar voltages, symbols, and definitions. The book describes the use of modular circuits in construction of conversion systems; modular circuits manufactured by the Digital Equipment Corp. are mentioned directly. Very well written and illustrated; should be a useful guide to the expert and a good introduction for the beginner.—D.J.P. (Digital Equipment Corp., Maynard, Mass.)

Circle 1 on Readers' Service card

Bibliography, Application Data Sheet 245 (free), lists typical applications of the automatic amino acid analyzer in biochemical, clinical, agricultural, and nutritional investigations; and references to development of basic methods. All references cited mention use of the Beckman model 120B or of similar instruments. This 30-page booklet comprises a subject index (pp. 1-10) and a bibliography (pp. 11-30). The subject index is a guide to the materials ex-

The material in this section is prepared by Denis J. Prager (D.J.P.), Laboratory of Technical Development, National Heart Institute, Bethesda 14, Md. (medical electronics and biomedical laboratory equipment).

The information reported here is obtained from manufacturers and from other sources considered to be reliable. Neither *Science* nor the writer assumes responsibility for the accuracy of the information. A Readers' Service card for use in mailing inquiries concerning the items listed is included on page 779. Circle the department number of the item in which you are interested on this card.

amined, the majority of which pertain to the amino acid composition of native protein and peptide hydrolyzates. Citations in the bibliography provide details of the specific application.—D.J.P. (Beckman Instruments Co., Spinco Div., 1117 California Avenue, Palo Alto, Calif. 94304)

Circle 2 on Readers' Service card

Pocket radiation alarm, model 28500 Rate Alarm Monitor, is a beta-gamma detector that buzzes when the preset level is exceeded. Employs halogen-quenched Geiger-Mueller tube. Provides 130 hours of service from mercury penlight cells; indicator light shows battery condition. Four ranges: 3, 10, 30, or 100 mr/hr. Weighs 5 oz (150 g); clips to pocket. List: \$99.—D.J.P. (Gelman Instrument Co., P.O. Box 1448, Ann Arbor, Mich. 48106)

Circle 3 on Readers' Service card

Automatic injector, Sage model 067, a high-speed electrochemical injector for repeated, reproducible injections of from 0 to 4.5 ml of liquid from standard 5- or 10-cm³ syringes. As many as 60 injections per minute. Resetting and refilling of the syringe are automatic and rapid. Pumps against up to 5-atm back pressure. Reproducibility within 2 percent of volume delivered. Injection times vary depending on syringe size, volume to be pumped, and needle size; with a 5-cm³ syringe and No. 17 needle, 1.5 ml of water is injected in 80 msec. Recommended for physiological and other applications requiring rapid, reproducible injection of precisely set volumes of liquids. Dimensions: 8.5 by 3.5 by 3.5 inches (22 by 9 by 9 cm). Weight: 4 lb (1.8 kg). List: \$145.—D.J.P. (Sage Instruments, 2 Spring St., White Plains, N.Y. 10601)

Circle 4 on Readers' Service card

Surface area meter (Ströhlein, from W. Germany) measures the surface area of particles over the range of 0.2 to 1000 m²/g by the Brunauer-Emmett-Teller nitrogen-adsorption method. The

weighed powder sample is placed in one of two matched adsorption flasks which are purged with dry nitrogen in a special heating block at 150° to 180°C to remove moisture and other adsorbed vapors; the block can purge nine samples simultaneously. The sample flask is transferred to the measuring apparatus and equilibrated with its empty twin. Both flasks are then immersed in liquid nitrogen, causing a monomolecular film of nitrogen to adsorb on the surface of the sample's particles. The resulting drop in pressure in the sample flask is measured with a differential manometer and converted directly to surface-area-per-gram by use of a nomogram. Total time: 30 minutes. Meter comes complete with thermostated heating block, measuring apparatus, ten adsorption vessels, two matched weighing vessels, calibration sample, and nomogram. Operates on 230-volt, 60-cy/sec a-c power. List: \$2380.—D.J.P. (Fisher Scientific Co., 415 Fisher Building, Pittsburgh, Pa.)

Circle 5 on Readers' Service card

Rodent respirator, Harvard Apparatus model 580, for adequately ventilating small rodents (mice, rats, hamsters) where small stroke-volumes at fast rates are needed. The positive-pressure type cylinder-pump delivers air or nonexplosive gas mixtures to the animal under pressure through a three-way valve. At the end of the intake stroke, the valve changes and the elasticity of the lung produces expiration; exhaust gas can be collected or recycled. Independent controls can change both rate and volume while the pump is running. Piston-mechanism is such that the cylinder completely empties after each stroke, regardless of the stroke volume. Rate continuously variable from 30 to 200 strokes per minute, using electronic motor control. Luer-Lok syringe barrels are used as the cylinder; a Delrin piston with O-rings ensures a tight moving seal. A 20-cm³ barrel produces stroke volumes adjustable from 0.5 to 10 cm³ per stroke; with 10-cm³ barrel, volumes are adjustable from 0.2 to 5 cm³ per stroke; a 20-cm³ barrel is normally supplied. Pistons and barrels easily changed in the laboratory. Output fittings are 3/16 inch in diameter and fit standard plastic tubing of 3/16-inch bore. Dimensions: 12 by 6 by 8 inches (30 by 15 by 20 cm). List: \$250.—D.J.P. (Harvard Apparatus Co., Inc., Dover, Mass. 02030)

E & M's Newest Pressure Transducer The Linear-Core™ Model P-1000

The first in a wholly new series of force and pressure transducers is now available, featuring wide range, low volume displacement and a high overload factor. It reduces the per channel cost of pressure recording, since no pre-amplifier is required. Designed to operate into the PHYSIOGRAPH, the Linear-Core™ Model P-1000 provides maximum sensitivity of 4 mm. Hg/cm pen deflection. The overall range is from —100 to over 1000 mm.Hg. Volume displacement: 0.7 mm³ per 100 mm.Hg. Maximum overload: 4000 mm.Hg. Internal calibration: 10 and 100 mm.Hg. Linearity and hysteresis: $\pm 0.5\%$ of selected range. E & M Instrument Co., Inc., 6030 England St., Houston, Texas 77021. Circle "b" on r. service card

E & M's New Isotonic Myograph

Linear displacement transducer for smooth muscle and other constant tension studies: no internal hysteresis or friction; minimal system inertia; internal calibration. E & M Instrument Co., Inc., 6030 England St., Houston, Texas 77021

Personnel Placement

POSITIONS WANTED

(a) **Biochemistry Ph.D.**; Dept. supervisor in large hospital, university faculty member, research, public health experience; desires administrative research appointment. (b) **Psychology Ph.D.**, seeks electrophysiology research position. For details write Woodward Medical Personnel Bureau, 195 North Wabash Avenue, Chicago, Illinois 60601. X

Cytologist, Ph.D. Electron microscopy, botany, zoology. Publications. Teaching and research position. Box 164, SCIENCE. X

Ph.D. Agricultural Education, special interest in technology and the history of science, 6 years of teaching experience at secondary and junior college levels in biology. Available August 1965. Box 163, SCIENCE. 5/21

Ph.D. Microbial Genetics. Experience in biochemical and physiological aspects of genetic and plant cytology. Seeks research and/or teaching position. Box 162, SCIENCE. X

Physiologist/Pharmacologist, D.V.M. Ph.D. Teaching, research background in medicine. Prefers appointment in progressive arts and sciences or engineering college or medical school. Box 154, SCIENCE. X

(a) **Ph.D. Zoologist-Physiologist** (biochemistry, microbiology minors); experimental morphology, embryology, genetics training; arthritic, metabolic postdoctoral research; industrial toxicology experience. (b) **M.A. Systematic Zoology** (parasitology, helminthology, medical entomology minors); research, teaching experience; desires position with potential in zoological sciences. Please write Science Service, The Medical Bureau, Inc., 900 North Michigan Avenue, Chicago, Illinois 60611. X

POSITIONS WANTED

Magnetobiologist, Ph.D. Experimental medicine, 1965. Strong biology, physiology, physics, microclimatology background. Experience in bioclimatology. Fluent in Dutch, Spanish, German, French. Prefers magnetobiological research. Box 158, SCIENCE. X

Microbiologist-Immunologist, Ph.D. Broad training and interests. Research, clinical, and teaching experience. Desires western United States, challenging position with opportunity for professional growth. Available immediately to 1 July. Box 159, SCIENCE. X

Vertebrate Zoologist, Ph.D. Fifteen years of college and university experience. Seeks teaching-research position for one year (1965-1966) or on a permanent basis. Box 160, SCIENCE. 5/14

POSITIONS OPEN

(a) **Ph.D. Applied Mathematics**, interdisciplinary and independent research; Midwest. (b) **M.S./Ph.D. Psychology/Biostatistics**, human factor experiments; Midwest. (c) **M.S. Virologist**, public health investigations; West; to \$11,000. (d) **Ph.D. Bacteriology**, clinical, East; to \$15,000. **Faculty Appointments:** (e) **Chairman**, Pharmacology department; Northwestern university; (f) **Chairman**, Education-Psychology; small college administrative experience; Midwest. (g) **Biology Instructor**, Southeastern junior college. (h) **Chemistry Instructor**, Northeastern college. Many others at **Science Service, The Medical Bureau, 900 North Michigan Avenue, Chicago, Illinois 60611.** X

Assistant Head, Dept. of Micro-Biology & Immunology. Leading, University-Affiliated, N.Y.C. Hospital & Medical Center. Once every so often a scientist comes across a stimulating position designed to tax his imagination, talent, & resourcefulness. Such a position now exists if you have a Ph.D. in Physical Biochemistry, Immunochimistry or Colloid Chemistry. Opportunity for advanced research in addition to administrative and supervisory responsibilities. Excellent salary plus complete benefit program. Write, stating salary to: **Montefiore Hospital & Medical Center, 210th St. & Bainbridge Ave., Bronx, NY 10467 Att: Mr. Freeman, Personnel Dept.**

CAREER APPOINTMENTS

Exhibit A

Achievement is the most conclusive evidence of capability.

At Booz-Allen Applied Research, achievement takes many forms, covers many fields, and is manifest in the successful completion of more than 3,000 projects for 1,200 clients. State-of-the-art technical assignments in astronautics, communications, computer and data handling systems, feasibility analysis, operations analysis, transportation, and numerous other problem areas of equal complexity have demonstrated both the breadth and the depth of our capability.

Continued achievement has meant strong, steady growth . . . inevitably accompanied by demands for additional staff members to help us meet new challenges. A career appointment at BAARINC offers exceptional rewards, both personal and professional. To investigate them and explore the openings for which your background may equip you, please send your complete resume to Mr. Robert M. Flint, Director of Professional Appointments.

You can have proof of AO's superior optical performance ...in seconds

With the new AO Microstar and adapter equipped with the Polaroid Pack Film Camera Back, you simply focus through the binocular and snap the shutter. This is a direct-viewing, parfocal system... requires no ground glass or telescope. One minute later you have a 3 1/4" x 4 1/4" Polaroid color print that will verify, beyond doubt, the amazingly superior visual image you saw

through the microscope. (Black-and-white prints are ready in only 10 seconds.)

Specimen detail is in crisp, sharp focus from corner to corner. There's no drop-off or fuzziness around the edges. Compare the picture with the best photomicrographs you've ever taken. Here is on-the-spot proof of the superiority of AO's infinity-corrected optical system.
