## MY BEST BUY IN LIFE INSURANCE

*Have you discovered  
low-cost TIAA coverage?*

For example,

A **\$50,000** POLICY COSTS ONLY **\$98** at age 30. Here's how:

### \$50,000 20-Year Home Protection Policy

Age at Issue	25	30	35
Annual Premium ( <i>Payable only 16 Years</i> )	\$134.00	\$159.00	\$206.50
Cash Dividend End of First Year*	55.50	61.00	70.50
First Year Net Premium	\$ 78.50	\$ 98.00	\$136.00

\*These dividends are based upon the 1966 dividend scale and are, of course, not guaranteed.

This is a plan of level premium Term insurance which provides its largest amount of protection initially, reducing by schedule each year over a 20-year period to recognize decreasing insurance needs. There are several other insurance periods, and Home Protection policies are available at all ages under 56.

**ARE YOU ELIGIBLE FOR TIAA?** Yes, if you are employed by a college, university, private school, or other nonprofit educational or scientific institution that qualifies for TIAA eligibility.

Send the coupon for the new Life Insurance Guide and a personal illustration of TIAA policies for your age.

## The 702 lbs... that make the difference in diffraction gratings

Perfection in diffraction grating production calls for both science and art. At Jarrell-Ash we cover science with the finest equipment that exists. We admit, competition could duplicate the equipment. Duplicating the 702 lbs. of unique artistic talent pictured above is harder to do.

The Jarrell-Ash interferometrically ruled and controlled gratings reflect this unmatched blending of talent and equipment. The results are gratings with a ghost intensity of approximately .002% in the first order of a 590 groove/mm ruling. Resolution is 80-90% of theoretical. Efficiency at blaze 40-90%.

If you have an interest in gratings, let us send you a reprint of the APPLIED OPTICS article "Some New Advances in Grating Ruling, Replication, and Testing" by Richard F. Jarrell and George W. Stroke. We'll enclose our price list for quantities of gratings with identical characteristics...you'll be pleasantly surprised at the low price tag we put on perfection. Write: JARRELL-ASH CO., 530 Lincoln St., Waltham, Mass. 02154. Tel. (617) 899-4300.

# RECOVER COMPONENTS ELECTROPHORETICALLY!

You can now recover as many as 30 undiluted fractions in one hour working time. Technique requires no organic solvents, no extreme pH, no salt precipitation, no dialysis, and no reconcentration of protein.

Discover the preparative electrophoresis system which is as easy as these three steps:

1. Pour single gel solution into EC 480 PREPARATIVE GEL ELECTROPHORESIS CELL, apply samples directly, run for one hour, and remove gel slab.
2. Using the EC 479 ELECTROPHORETIC DESTAINER, stain and destain "guide strip" only.
3. Place gel slab on its side in separating grid (shown below) of EC 730 ELUTION CONVECTION CELL. Protein components are recovered simultaneously by elution convection electrophoresis in *original undiluted concentration*.

Entire experiment requires less than two hours working time. Total elapsed time will vary between three and six hours.

**Suppose  
we said  
you could be  
working with  
solid state  
electronics  
in three days**

... and then proved it.

Over the past few years we've made good on this promise to hundreds (particularly non-engineers) whose work includes programming, recording and analyzing data. A brief, simple-language introductory course given at your location or at BRS, shakes the mystery out of solid state and lets you prove to yourself the simplicity and versatility of working with solid state digital logic equipment.

You start off with a very brief, very general background on theory. The other 99% of the time you're working with an operational solid state training unit. The first schematic may be a little puzzling. Terminology is new. But after three days you'll whip through add-subtract counters, fixed interval programs, binary counters, comparator programs with ease.

If you and your colleagues are interested in having a course conducted at your location write to the BRS Technical Director for further information. There is no obligation for the course but scheduling does require adequate advance notice. Your inquiry letter or call will bring a prompt reply and complete details.

**THE INTERNATIONALLY ACCLAIMED**  
**BRAUN MECHANICAL**  
**CELL HOMOGENIZER**

The outstanding Braun MSK cell homogenizer, fully adapted for use in this country, prepares cell-free extracts for enzyme studies . . . homogenizes yeast, bacteria, tissue cultures or organs . . . pulverizes coarse particles (such as pigments or plastics), in either dry or suspended states . . . and yields intact subcellular particles (for example, yeast mitochondria and bacterial cell walls), ready for study.

Biochemists, microbiologists and other research scientists now have at their disposal this extremely efficient, highly effective and speedy tool for use with material either in the dry state or in suspension.

- With yeast, 90% disruption of 10 grams is achieved in only 30 seconds at 4000 rpm—99% in 60 seconds!

- Most bacterial cells show 99% breakdown in 2 minutes!
- Intact yeast mitochondria take just 20 to 30 seconds for preparation!

The remarkably short disruption time of the Braun MSK allows the processing of a series of batches, if necessary, in a relatively short period.

The Braun MSK features two-speed, circular shaking action. Cell walls are broken down by violent tumbling action of tiny glass beads. The sample may be cooled with CO<sub>2</sub> and kept below 5° C.

If the Braun MSK would be useful in your work, drop us a note and we'll send you all the details.
