

CHEMICAL PROCESSING AT ULTRASONIC HIGH FREQUENCY

with the new series of 800 kc
MULTISONS® Generators

Special transducers available for irradiation
in corrosive liquids.

APPLICATIONS

Cell destruction, selective extraction, accelerated
dissolution, particles dispersion, sterilization,
oxydations, hydrogenation, hydrocarbons decomposi-
tion, polymerization, depolymerization, catalysts
activation, micronic aerosolization,
flame spectro-photometry.

Progress in Biological Research with Microprobe Analysis

An ARL **ELECTRON MICROPROBE X-RAY ANALYZER** provides scanning electronmicrographs of the type shown above. The specimens are large blood cells of a salamander, the amphiuma, which is only incidental to our story.

The important features of the microprobes are:

1. Compared to optical micrographs at similar magnifications, the depth of focus is practically infinite.
2. Multielement in situ chemical analysis can be carried out within the detail of the cell structure shown—down to volumes in the order of several cubic microns. The microprobe is capable of *differentiating* the nucleus from the cytoplasm, or one part of the nucleus from another part, *on the basis of chemical composition*.

The microprobe provides the next step to further progress in Biochemistry. Applications work carried out to date includes studies related to:

**Cytochemistry
Histochemistry
Physiochemistry
Chemical pathology
and Dental chemistry.**

We will be happy to provide additional information.

CalorexTM the absurdly simple heat exchanger

But safe: Explosion-proof, doesn't use electricity.

But versatile: Flexible, flat-sided tubing and so can be easily wrapped around *any* contour of *any* size (flasks, distillation columns, piping, centrifuges, tanks, tubes, drums, etc., etc.).

But utilitarian: Multiple uses in laboratory, pilot plant, production.

But temperature-tolerant: Several materials permit wide temperature range for heating or cooling: -75° to +480°F.

But option-providing: Three diameters (8, 15 and 30mm.), various lengths (25, 50 and 100 feet).

But communicative: As our 16-page brochure demonstrates.

Lambertsen:

UNDERWATER PHYSIOLOGY

"The recent manned operations in the open sea, highly important in their own right, are exploiting the basic physiological findings of the past fifty years. However, the lack of basic information concerning a means for improving decompression from great depths, the effects of gases at extreme pressures, and the effects of interactions of multiple environmental conditions differing radically from those on the surface of the earth, will present serious limitations to the great opportunity for further practical application of human engineering skills. The Symposium was designed to encourage the reporting of progress in critical areas of underwater physiology. These proceedings are a documentation of the papers presented as well as the discussion resulting from these papers. It consists of detailed and searching studies of man, animals, tissues and cells, with emphasis upon research required to enable further extension of the maximum diving depth and its duration."—**From the Foreword**

7 reasons why no other integrator can say "me too"

The extraordinary **Summatic Integrator** provides automatic digital print-out of gas chromatographic peak areas. Through the use of fresh electronic concepts, the 1501 **Summatic** offers more convenience features, computing accuracy and lowest possible cost* for automatic data processing of analytical information.

The **Summatic** is not a "me too" instrument, but is first with the following state-of-the-art design innovations:

- 001481 1 Very wide dynamic range (full 0-1000 mv) through first use of "auto-ranging".** Allows unattenuated input from flame ionization detector for superior counting statistics.
- 003248 2 Unique slope threshold control permits baseline noise immunity without decreasing slope sensitivity or integrator response time.
- 000819 3 First to isolate recorder output from the G.C. detector, and provide selectable automatic attenuation of recorder signal.
- 007090 4 Threshold level detector provides a second peak detection system completely independent of slope to automatically detect shoulders and very broad, slowly eluting, peaks.
- 008872 5 Built in printer for convenience and space saving. Peak integrals are accumulated directly in the counter-printer eliminating the cost and maintenance of a separate memory system.
- 001113 6 Simplest possible installation.
- 001527 7 Substantially lower cost than any other electronic digital integrator.
- 000805
