

LEMUR BEHAVIOR A Madagascar Field Study by Alison Jolly

A description of the behavior of troops of Lemur catta and Propithecus verreauxi - which compares them with other primate societies. Isolated for fifty million years, and now facing extinction, lemurs have evolved many types and give scientists an independent evolutionary line to compare with the old and new world monkeys. This field study provides one of the few descriptions of their individual behavior, troop structure, and their feeding, sleeping, and sexual habits. Illustrated with maps, figures, tables, and photographs.

## SOCIAL COMMUNICATION AMONG PRIMATES Edited by Stuart A. Altmann

The published proceedings of the international symposium on Communication and Social Interactions in Primates (American Association for the Advancement of Science meeting, Montreal, 1964.) An interdisciplinary approach with contributions from such diverse fields as psychiatry, linguistics, anthropology, and zoology, revealing the major recent research trends in this vital field. Illustrated with numerous charts, graphs, and photographs. \$15.00

part of a common multienzyme system; and (iii) rapid proliferation of ER, primarily smooth ER membranes. Experiments with actinomycin D and puromycin indicated that these events reflect the synthesis of new proteins. Experiments which changed the lipid composition of the membranes (by dietary changes, or by the addition of various lipids to defatted membranes) suggested that these lipids do not play a critical role in the differentiation process. Kinetic experiments showed that the activity of the microsomal constitutive enzymes appears first in the rough and then in the smooth ER. Pulse-labeling experiments revealed that the same applies for total, newly synthesized membrane proteins. The results were considered in terms of a series of models which assume that new membrane is produced in the cell either in a one-step operation or in a multistep operation. In the latter case, a "primary" membrane is presumably laid down in a first step and various enzymes are added to it in subsequent steps. Each of these models could apply to a homogeneous membrane within which all constitutive proteins are randomly distributed, or, alternatively, to a mosaic membrane in which each tessera represents a multienzyme system or an aggregate of identical enzymes.

More recent results, which may narrow the choice between these various models, were reported by T. Omura. He showed that in fully differentiated hepatocytes the turnover of microsomal membrane lipids, as followed by regression of labeling with 14C-glycerol, is much faster (half life ~ 40 hours) than the half life of the total membrane proteins (half life ~ 100 hours). Two constitutive enzymes which at present can be isolated and purified from microsomal membranes proved to have different half lives. Hence, ER membranes appear to be continuously synthesized, even in the fully differentiated hepatocytes of the adult animal. The general turnover rate is relatively high and appears to be different for some of the membrane components. In this situation, it is possible to check on adult animals, under more favorable experimental conditions, some of the results previously obtained in newborns. For instance, kinetic studies on labeled membrane proteins can be carried out at the level of individual, satisfactorily purified enzymes (cytochrome b<sub>5</sub> and NADPHcytochrome c reductase). The results

show that these enzymes are produced in the rough ER, presumably by attached ribosomes, and subsequently transferred to the smooth ER. They also suggest a superimposed and relatively rapid process of membrane exchanges between the rough and the smooth ER, which leads in time to an equilibrium of the label.

So far, the findings exclude the existence of a homogeneous membrane in which all components turn over in synchrony, and favor a multi-step assembly model, probably of the mosaic version.

# WRITE FOR **YOUR FREE COPY** OF THIS VITAL REPORT

It describes the use of analog and hybrid computers for data processing and statistical analysis of continuous signals. The general purpose analog computer can provide an economical and flexible approach to your on-line data reduction requirements. Expensive intermediate steps of digitizing and manual calculations are eliminated. Answers are immediately available for oscilloscope display or for plotting on recorders. Pre-patch panels permit storage of many different data reduction routines. The report also describes the value of the analog/hybrid computer as a tool for the simulation or modeling of dynamic systems.

## Two new SCIENCE IOURNALS from Cambridge

## **Journal** of Plasma Physics

Editor: J. P. DOUGHERTY University of Cambridge Associate Editors:

DANIEL BERSHADER Stanford University F. D. KAHN The University, Manchester W. B. THOMPSON University of California, La Jolla

Vol. 1, Part 1, February 1967 The Journal of Plasma Physics publishes results of original research on experimental and theoretical plasma physics and its application to thermonuclear research, electrical and chemical engineering, astrophysics, radio astronomy, the physics of space and the ionosphere. It also reviews relevant literature. An index will appear in the last part of each volume.

One volume of four parts annually. Subscription price: \$24.50. Special introductory price to subscribers to Vol. 1: \$19.75 for one year.

# The Journal of General Virology

**Editors: COLIN KAPLAN** Lister Institute of Preventive Medicine PETER WILDY The Medical School, Birmingham

Vol. 1, Part 1, January 1967

Published by Cambridge for the Society for General Microbiology. Virological papers that would have been published formerly in the Journal of General Microbiology now appear in the new journal.

It covers original work in general virology, interpreted broadly as the study of bacterial, plant and animal viruses including structure, genetics. systematics and interactions with host cells. Pathogenesis is also within its scope.

One volume of four parts annually. Subscription price: \$19.50. Special introductory price to subscribers to Vol. 1: \$15.50 for one year.

# 15 C ELECTROPHORESIS

is in the act.

Copyright 1965 Canal Industrial Corp.

Now in use in more than 2000 laboratories, Disc Electrophoresis offers unequalled sensitivity (to 0.01 microgram), speed (separation in 10-30 minutes), simplicity and reproducibility. Disc Electrophoresis is applicable to almost every area of protein research and clinical investigation, improving over separations by other methods and giving new separations never before possible by any technique.

In Disc Electrophoresis, migration of sample substances through specially prepared columns of polyacrylamide gel produces exceptionally sharp bands of isolated fractions, "stacked" in disc-like zones as little as tens of microns thick. A random sample of the recent literature

disc-like zones as little as tens of microns thick. A random sample of the recent interature reporting uses of Disc Electrophoresis includes:
SOURCES: Amoebae, E. coli, flu virus, micobacteria, neurospora, polio virus, ribosomes, slime mould, staphylococci, tubercle bacilli; algae, cats, cattle, dogs, earthworms, fish, guinea pigs, hamsters, horses, humans, insects, lobsters, mice, pigs, plants, quail, rabbits, rats, sea urchins, sheep, snails, squid; tissue extracts of aorta, brain, horny tissue, kidney, lens, muscle, pancreas, parotid, pituitary, skin, thymus, thyroid; fluids such as axoplasm, blood, cerebrospinal fluid, milk, pancreatic juice, saliva, sperm, umbilical cord serum, urine and uterine fluid.
SUBSTANCES SEPARATED: Proteins, including C-reactive proteins, glycoproteins, mucoproteins, nucleic acids, nucleo-proteins and thyroxin-binding proteins; hemoglobins and haptoglobins; globulins, histones, human and bovine growth hormones, ovine follicle stimulating hormone, human chorionic gonadotropin. enterotoxins. Hageman factor, α-crystallin, collagen, diglyceride

human chorionic gonadotropin, enterotoxins, Hageman factor,  $\alpha$ -crystallin, collagen, diglyceride and prolactin; amylase, aminopeptidase, phosphatases;  $\beta$ -galactosidase, carbonic anhydrase, carboxypeptidase, dehydrolipamide dehydrogenase, glycogen phosphyrylase, lipase, lactic and malic dehydrogenase, Phosphorylase, ribonuclease, sialidase, transaminase and transpeptidase. DIAGNOSIS OF: Acute schizophrenia, cancer of the breast and lung, glomerulonephritis, liver pathology, lupus erythematosus, macroglobulinemia, milk allergy, myeloma, myocardial infarction, nephrosis, normal and abnormal pregnancy, pneumonia, primary tumor sites, rheumatic fever, sickle cell anemia, thalassemia, tuberculosis and uremic-hemolytic syndrome.

See how you can apply the benefits of Disc Electrophoresis to your own research. Send now for complete information, including bibliography, without cost or obligation. Write
