

NEW from PHARMACIA

## SEPHADEX® LH-20 extends gel filtration to organic solvents

Pharmacia Fine Chemicals now introduces the *first* lipophilic derivative—Sephadex LH-20—to extend the use of Sephadex to organic solvents. Since it swells in water, polar organic solvents and in mixtures of these solvents, Sephadex LH-20 makes it possible to apply the conventional Sephadex gel filtration technique in fields such as lipid chemistry, polymer chemistry and other areas of organic chemistry and biochemistry where organic solvents must be used.

### Sephadex Solvent-Resistant Columns

The only laboratory columns especially designed for use in chromatographic separations with organic solvent systems. The columns are equipped with two specially designed adjustable flow adaptors for use with various bed heights and for ease of sample application. The columns have the advantage of allowing either descending, upward flow or recycling chromatography as one of their many features.

### RANGE OF APPLICATION

Solvent	Approx. solvent regain ml solvent/g dry gel	Approx. bed volume ml/g dry gel
Dimethylformamide	2.2	4
Water	2.1	4
Methanol	1.9	3.5-4.0
Ethanol	1.8	3.0-3.5
Chloroform*	1.8	3.0-3.5
n-butanol	1.6	3
Dioxane	1.4	2.5-3.0
Tetrahydrofuran	1.4	2.5-3.0
Acetone	0.8	1.5

\*Containing 1% ethanol.

Particle size: 25-100  $\mu$

### EXAMPLE OF SPECIFIC APPLICATION

Separation of glycerol esters in chloroform. Bed dimensions: 2.5x32 cm. Sample: 2 ml containing 4 mg of each substance. Flow rate: 0.6 ml/min.

"over 185 outstanding scientists and 23 physicians were interviewed, as well as officials of the American Medical Association and university medical school faculties. Also included were biologists, chemists, entomologists, nutritionists, pharmacologists, plant pathologists, toxicologists, zoologists (including a geneticist), as well as experts in agriculture, conservation, and public health." However, contrary to general practice, the testimony of these persons has never been published. Instead, only a summary written by the committee staff appears in the hearings report and there is no list of the scientists who appeared before the committee (1). A list does appear in Whitten's book but it includes only those who "were agreeable to being identified as having been interviewed by the staff" (2). Nowhere is there any indication that any, or which, of the scientists support Whitten's or the staff report's contentions, and nowhere is the testimony printed in its entirety for the open judgment of the scientific community.

### Weightlessness Can Be Confusing

While much of the theory of the space age has no interest for the nonscientist, the concepts of orbiting in a gravitational field, and "floating freely" through space, are two which the public should be able to distinguish. The word "weightless" is used frequently to describe the condition of spacecraft and astronauts in orbit. A majority of readers of the daily press probably interpret weight to be simply the gravitational force of attraction between an object and the earth. I fear that many readers are led to the erroneous but understandable conclusion that if an object is weightless, then this force has ceased to exist. Some may invoke, as a reason, the great distance of an orbiting body from the earth. In fact, the height of most orbits reduces the gravitational force by only a minor part,

# You're Just One Minute Away From Automated Labwashing

Patent 3,316,925

The CRC Labwasher

Sets up in seconds. No costly installation charges. And no inconvenience. Quick-disconnect coupling includes universal adapter for attachment to any water tap. Smooth-working ball bearing casters lock for stable operation. And a three-wire cord—over eight feet long—makes direct connection to distant outlets possible. Operates on 115 Volts—60 cycles.

The Labwasher handles almost all lab glassware. Cleans and dries it thoroughly and efficiently. With 50% less breakage than handwashing. Pays for itself in man-hours saved.

and the force is itself the cause of the orbiting motion, according to Newton's laws.

It is a pity that there should be scope for confusion over this basic principle of mechanics, as a scientific venture has rarely captured the interest of the public to the extent of the present space program (or spent as much public money). Furthermore, the interest will be greatly increased by the first Apollo mission, and there will then be a fundamental difference. The gravitational forces on an Apollo crewman will be very weak for much of his journey, and his weightless condition will indeed be due to his remoteness from the earth and moon.

Perhaps science writers, in view of the great public interest, should take care to make the distinction between the two different kinds of "weightlessness."

### A Trained Eye on UFO's

Correspondence in your columns on UFO's points to a grievous lack of trained observers. For the elucidation of these rare and mysterious objects, first-class observations are necessary, and very few people, even among those supposed to be scientifically trained, can observe. The following drill, commonly used by observers of meteors, fireballs, and so on, is applicable and deserves to be better known. It is assumed you can transfer your whole attention to the phenomenon.

On becoming aware of the object, stand still and start counting seconds. Kick with your heel to mark your position exactly. Hold a hand out at arm's length and gauge the angular size of the object. (The thumb in width subtends  $2\frac{1}{2}^\circ$ , the open hand,  $20^\circ$ .) Note the brightness of the object, compared to other visible objects, and any changes that may occur. Establish the beginning and the end of the object's path with reference to marks on the horizon. Determine whether the object passes behind or in front of any landmark. Try to fix the position of touchdown on earth, if you think that has occurred. After the object has disappeared, make written notes of the above details. Transfer the seconds count to accurate time by your watch. Listen critically for sounds as-

9 JUNE 1967

Need oil immersion 1000 $\times$  magnification for true edge-to-edge images of cell nuclei? Or for histological, bacteriological, or morphological studies? Then your students should have professional quality Academic 255 Flat Field Microscopes by Bausch & Lomb. These new instruments are built for long lasting, maintenance-free service, but are priced well within school/college budgets. They feature an optional double-viewing head with measuring pointers to help the student learn faster. To get all the details, of this and all the other Academic 255 Microscopes, write for our Catalog 31-2172. There's no obligation. Write Bausch & Lomb, 85642 Bausch Street, Rochester, New York 14602.
