

"DIAL" ULTRA-THIN SECTIONS?

Precisely . . . since the new Reichert "Om U2" ultramicrotome is automated. Now you just dial for single or continuous ultra-thin sections for electron microscopy. With all controls dial or push-button operated, you merely "select" speed, sequence and thickness of sections. The completely inertia-free thermal advance of the "Om U2" represents a major breakthrough in ultramicrotomy.

The "Om U2" gives you the accuracy of the thermal advance and the advantages of a precision, mechanical advance in one instrument. The tedious task of producing useful ultra-thin sections is now a thing of the past.

. . . or anything else. The Neslab PBC-4 portable cooler will chill a quart of Martinis from 75°F to 40°F in 10 minutes . . . without dilution from melting ice.

It will also fit into Dewar flasks to hold methanol at -30°C . . . and into a variety of laboratory vessels to chill reagents.

In fact, the specially designed 1 inch diameter cooling probe gets into more places and does more cooling than any other.

Of course it is at its best in a well insulated Tamson Circulating Thermostatic Bath where the 1600 BTU/hr capacity of the PCB-4 extends the bath control range to -15°C.

SARGENT pH combination electrodes

include both glass and reference in a single probe for the entire range 0 to 14 pH, from 0 to 80°C. All-glass construction has no rubber or plastic to contaminate the sample, and no crevices or pockets to trap solution for carry-over from one sample to the next. In both standard and miniature sizes for as little as 1 ml and ½ ml of sample.

Range, 0 to 14 pH with linear response even in highly acid solutions. Alkali ion response is insignificant below pH 12.5; it is low and — more important — stable in higher pH solutions.

Shock-resistant construction derived from inherent strength of the glass and careful fabrication.

Fast response, both in sensitivity of the glass and in symmetrical internal and external references—for rapid temperature equilibrium.

High efficiency, with a millivolt/pH response close to the Nernst coefficient.

Make no mistake! The ORION Model 801 Digital pH Meter eliminates reading, ranging, and interpolation errors. A unique all-electronic display system gives complete data presentation including decimal point and polarity sign. Illuminated inch high numerals are visible regardless of lighting conditions at distances up to thirty feet, with readings to 0.001 pH or 0.1 mv. Both strip chart recorder and binary coded decimal outputs available at the rear panel. Without question, the Model 801 is the most technically advanced pH Meter available today. May we arrange a demonstration in your laboratory?

At last! A totally new concept in reference electrode design. Made especially for specific ion electrode measurements and precision pH determinations, the IONALYZER® series reference electrode is constructed of specially developed unbreakable acid-resistant (including HF) plastic. Unique low thermal mass design gives more precise measurements with changing ambient temperature. Quickly disassembled for easy cleaning and long trouble-free life. Choice of internal filling solutions allows matching of conventional AgCl or calomel reference electrode characteristics. Part of the new technology for chemical measurement by ORION.
