

**Only an automatic
polarimeter this
sensitive could be
this accurate.**

Sensitive to 0.0001° and accurate to $\pm 0.0002^\circ$, Bendix® Polarimeters are the world's most accurate—and often give more precise results than methods based on any other physical or chemical phenomena.

Bendix automatic polarimeters are all-electronic with no moving parts. They feature the most versatile readout in the business—dual-range meter, chart recorder (directly), digital display and a tape printer. And you can also use a scope for a readout.

The basic model features a four-inch, dual-range meter for reading optical rotation. A recording model incorporates a multi-range, strip-chart recorder. The digital model provides a direct, four-place readout and gives optimum advantage of system accuracy. A printer programmer can be added, to automatically scan a number of measurements, totalize, stop or repeat with readout on a digital tape printer.

Ability to use a very short sample cell extends the effective range to $\pm 50^\circ$ and adds to the versatility of Bendix automatic polarimeters for quality control, process control, reaction monitoring, column chromatography and optical and physical property studies.

Bendix scientific instruments—including mass spectrometers, atomic absorption and flame spectrophotometers, polarimeters, polarographic systems and electron multipliers—are used in over 100 areas of research and analysis.
