Electrical Aspects of Combustion

By JAMES LAWTON and FELIX WEINBERG, both of Imperial College, London. Recent years have seen a rapid growth of interest in ionization in flames, detonations, and other combustion phenomena. The authors, who have been engaged in recent advancements in the field, devote their book to the formation, behavior in fields, diagnostics, and use of ions, electrons, and charged particles in combustion processes. 124 illustrations. \$11.20

Practical Pharmaceutical Chemistry SECOND EDITION, IN TWO PARTS

By A. H. BECKETT, University of London; and J. B. STENLAKE, University of Strathclyde. Rapid development in techniques of chemistry and instrumentation together with the introduction of many new drugs have necessitated the expansion of this book into two volumes. The first part deals with general analytical methods, while the second part is concerned with the physical techniques of analysis. (Athlone Press) Part One, \$7.75. Part Two, \$12.50

Handbook of the Birds of India and Pakistan

TOGETHER WITH THOSE OF NEPAL, SIKKIM, BHUTAN AND CEYLON; VOLUME III: STONE CURLEWS TO OWLS; VOLUME IV: FROGMOUTHS TO PITTAS

By SALIM ALI, and S. DILLON RIPLEY, Smithsonian Institution. This Handbook, which will be completed in about ten volumes, aims to describe the 1,200 species of birds which are to be seen or are known to have occurred in India, Pakistan, Nepal, Sikkim, Bhutan, and Ceylon. The authors describe what is known of the distribution, habits, breeding, biology, diet, and voice of the birds in the area. Volume III, \$12.95. Volume IV, \$16.75

Mind, Brain and Adaptation in the Nineteenth Century CEREBRAL LOCALIZATION AND ITS BIOLOGICAL CONTEXT FROM GALL TO FERRIER

By ROBERT M. YOUNG, King's College, Cambridge. The author examines ideas of the nature and localization of the functions of the brain in the light of the philosophical constraints at work in the sciences of mind and brain in the nineteenth century. Particular attention is paid to phrenology, sensory-motor physiology, associationist psychology, and the theory of evolution as applied to the study of psychology. \$9.00

Fully Automatic Glassware Washing and Drying

The new CRC Labwasher® offers improved glassware washing plus plasticware cycle.

Sets up in seconds. No costly installation charges. And no inconvenience. Quick-disconnect coupling includes universal adapter for attachment to any water tap. Smooth-working ball-type casters lock for stable operation. And a three-wire cord—over eight feet long—makes direct connection to distant outlets possible. Operates on 115 Volts — 60 cycles.

They cut glass labware breakage in half, and soon pay for themselves in man-hours saved.

- Choice of tap or distilled water rinses (up to 3)
- Dual-Temp Forced-Air Drying
- Booster heater for elevating and maintaining water temperatures
- Convenient front loading with roll-out racks
- 16 stainless steel accessory racks handle glass labware or plasticware

Models in Structural Inorganic Chemistry

By A. F. WELLS, *University of Connecticut*. Most inorganic compounds exist as solids made up of repeating patterns of atoms. To best understand these structures and their formulae the student should study and build three-dimensional models. This book, geared to the undergraduate, describes the construction of models of more important types of inorganic compounds. After a discussion of general principles, the text is divided into five sections: polyhedra and other finite systems; repeated patterns, two- and three-dimensional nets; sphere packings; and structures built from tetrahedra and octahedra. Spring 1970 200 pp. 146 text figs. cloth \$7.20 paper \$4.25

Molecular Quantum Mechanics:

AN INTRODUCTION TO QUANTUM CHEMISTRY

By P. W. ATKINS, *Oxford University*. Presenting the physical principles basic to an understanding of molecular structure and its properties, this volume begins with an introduction to the ideas of quantum mechanics. Part II is concerned with the mathematical foundations of the theory, while Part III deals with atomic and molecular structure and spectra, as well as the electric and magnetic properties of molecules. MOLECULAR-GENETIC MECHANISMS OF DEVELOPMENT

Edited by Zh.A. Medvedev

Chief of the Laboratory of Molecular Radiobiology, Institute of Medical Radiobiology, Academy of Medical Sciences of the USSR
Translated from Russian by Dr. Basil Haigh

This book is a model of scientific exposition that takes the reader step by step through the mechanisms of morphogenesis at every level of organization from the virus to the highest multicellular organisms. Along the way, the author summarizes the most important modern research, showing how the understanding of particular heredity mechanisms has given rise to new and fruitful hypotheses.

Much of the material it presents is unavailable elsewhere—including important new research data on phage RNA synthesis . . . chromosome structure . . . chromosomal puffs . . . myosinATPase activity . . . messenger RNA activity and changes in the RNA spectrum in oogenesis . . . the relative influence of nucleus and cytoplasm on differentiation . . . and the morphogenesis of eye structures in amphibians.

REVIEWS OF PLASMA PHYSICS

VOLUME 5

Edited by Academician M. A. Leontovich
Kurchatov Institute of Atomic Energy
Translated from Russian by Herbert Lashinsky, Institute of Fluid Mechanics and Applied Mathematics, University of Maryland, College Park, Maryland

REVIEW OF PREVIOUS VOLUME:

" . . . an excellent review volume . . . leaves one eager to see the volumes which will follow. It is the sort of immediate reference most plasma physicists would like to have . . ."—NUCLEONICS

The final volume in a systematic, multi-volume review series on the present status of plasma theory, serving both as an introduction for advanced students and researchers entering the field, and as a convenient, authoritative, up-to-date presentation of current knowledge for workers in plasma physics.

This volume contains the latest advances in controlled thermonuclear fusion research. Topics covered include toroidal magnetic configurations, mirror devices and plasma-focus experiments.

Unlimited Volume Syringe Pump

**Pulse-Free
Uniform Flow
Pumps From A Reservoir
Flow Rates Up To 29 ml/min**

Dial any flow rate from 0.007 to 29 ml/min for pulse-free uniform flow. Pumps continuously at precise flow rate desired. Unique design eliminates transients, even from valving. Add small volumes to streams on a continuous basis, or feed samples to analytical instruments. Use in chemistry, tissue culture, bacteriology, pilot plant studies, process applications. our pulsed YAG laser

It's simple.
It's rugged.
Very reliable.

SO WHAT ELSE IS NEW?

We hope you'll take the trouble to ask us that question... personally. We promise you some interesting eye-openers.

Like a modular assembly of the basic laser: 27-inches long x 6-inches square / Stable, spring-loaded gimbal mount of the Pockels cell Q-switch for wide range of alignment control / Adjustment controls remote from optical path for optimum convenience and safety / Interchangeable heads, laser cavities and optics so you can use rods in a wide range of sizes / Water cooling allows high repetition rate and assures repeatability of output energy / Compatible with other power supply units Why not also ask about our CW YAG lasers? This, in part, is what's new with our YAG Laser. From HADRON. Write or call for full information.

BIOLOGY AND THE FUTURE OF MAN

Edited by
PHILIP HANDLER
President of the National
Academy of Sciences

Organized by the Committee on Science and Public Policy of the National Academy of Sciences, some twenty panels of authorities examine the present state of knowledge in the life sciences.

"It dawns on you early in this *tour de force* of biology now and in the future that in order to summarize developments in every field the editor has suppressed the names of investigators. . . . It's great. One suddenly realizes that it is information, not personality, which is central to the course of science. Information is certainly what you get in this thousand-page work—the first half devoted to basic studies, the second to applications in medicine, surgery, population studies, etc. No field has been overlooked be it in taxonomy or transduction in bacteria. In style the writing is crisp, straightforward, and high-level. . . . One of the refreshing qualities of the work is the emphasis on unsolved questions, some perhaps within reach in the next decade, many others profound in complexity."
— *Kirkus Reviews*

"A broad and sophisticated statement of the whole field of theoretical and applied biology." — RENÉ DUBOS, Rockefeller University
