

historical understanding of his breach with traditions and of positions taken and leadership exerted in scientific disputes. A controversial figure in his own day, Galileo has remained a subject of controversy in conflicting interpretations and assessments of his contributions. The essays in *Galileo Studies* deliver important insights into relations of ideas to one another in Galileo's work, and into how he actually proceeded in effecting reformations of scientific inquiry.

The Cary 14, 15, 16S and 17 Recording

In the whole world, there just isn't another group of comparable recording spectrophotometers.

Each has been thoughtfully designed with a proven double monochromator and dual-beam photometric system. Each is precisely engineered throughout and meticulously tested. And each is the best recording spectrophotometer you can buy for the price.

First the venerable workhorse, the Cary 14. Using a prism-grating monochromator, the 14 rapidly and accurately records spectra in the ultraviolet, visible and near infrared from 186 to 2650 nm. Measures absorbance and transmittance directly. Adapts with accessories for reflectance, fluorescence, scattered transmission, and fixed-wavelength kinetics. Price: \$19,600.*

Next, the Cary 15. Reliable, proven performer in such fields as the life sciences, pharmaceuticals, and industrial research and quality control. Utilizes a double monochromator with two prisms to give exceptional UV penetration. Covers the UV-VIS range (185-800 nm). Features dual detectors to insure maximum photometric accuracy when measuring at high absorbances. Price: \$12,950.*

spectrophotometry's awesome foursome.

Then, the modular Cary 16S. A recording version of our renowned Cary 16 manual spectrophotometer. Designed for scanning and recording applications in the UV-VIS range where high stability and photometric accuracy are essential. To tailor a 16S system to specific requirements, pick and choose from a large group of modular accessories. Price of basic system: \$10,970.*

Finally, the solid state Cary 17. It delivers all the performance of the Cary 14 plus such built-in extras as digitally coupled scan and chart drive, meters to indicate when operating conditions are optimum, and a multi-zero/multi-range slidewire. Does anything any spectrophotometer can. But better. Plus, it's completely computer-compatible for future closed loop operation. Range: 186-2650 nm. Price: \$24,950.*

(We might also mention that for each of these instruments there's a SpectroSystem 100. A dedicated computer system for immediate processing of all spectral data.)

That's a brief look at Cary recording spectrophotometers. One just right for your work. And your budget. For complete specifications and prices, simply write Cary Instruments, a Varian subsidiary, 2724 South Peck Road, Monrovia, Calif. 91016. Ask for data file E101-21.
